118

## Foreword

- 119 The *DNS Client Profile* (DSP1038) was prepared by the Server Management Working Group of the  
120 DMTF.
- 121 DMTF is a not-for-profit association of industry members dedicated to promoting enterprise and systems  
122 management and interoperability.

123

## Introduction

124 The information in this specification should be sufficient for a provider or consumer of this data to identify  
125 unambiguously the classes, properties, methods, and values that shall be instantiated and manipulated to  
126 represent and manage a DNS client and its associated configuration information. The target audience for  
127 this specification is implementers who are writing CIM-based providers or consumers of management  
128 interfaces that represent the component described in this document.

129

# DNS Client Profile

## 130 1 Scope

131 The *DNS Client Profile* extends the management capability of referencing profiles by adding the capability  
132 to represent the DNS client configuration of a computer system and its IP interfaces.

## 133 2 Normative References

134 The following referenced documents are indispensable for the application of this document. For dated  
135 references, only the edition cited applies. For undated references, the latest edition of the referenced  
136 document (including any amendments) applies.

## 154 3 Terms and Definitions

155 For the purposes of this document, the terms and definitions in [DSP1033](#), [DSP1036](#), and [DSP1001](#) and  
156 the following apply.

### 157 3.1

158 **can**

159 used for statements of possibility and capability, whether material, physical, or causal

- 160   **3.2**  
161   **cannot**  
162   used for statements of possibility and capability, whether material, physical, or causal
- 163   **3.3**  
164   **conditional**  
165   indicates requirements to be followed strictly to conform to the document when the specified conditions  
166   are met
- 167   **3.4**  
168   **mandatory**  
169   indicates requirements to be followed strictly to conform to the document and from which no deviation is  
170   permitted
- 171   **3.5**  
172   **may**  
173   indicates a course of action permissible within the limits of the document
- 174   **3.6**  
175   **need not**  
176   indicates a course of action permissible within the limits of the document
- 177   **3.7**  
178   **optional**  
179   indicates a course of action permissible within the limits of the document
- 180   **3.8**  
181   **referencing profile**  
182   indicates a profile that owns the definition of this class and can include a reference to this profile in its  
183   "Referenced Profiles" table
- 184   **3.9**  
185   **shall**  
186   indicates requirements to be followed strictly to conform to the document and from which no deviation is  
187   permitted
- 188   **3.10**  
189   **shall not**  
190   indicates requirements to be followed strictly to conform to the document and from which no deviation is  
191   permitted
- 192   **3.11**  
193   **should**  
194   indicates that among several possibilities, one is recommended as particularly suitable, without  
195   mentioning or excluding others, or that a certain course of action is preferred but not necessarily required
- 196   **3.12**  
197   **should not**  
198   indicates that a certain possibility or course of action is deprecated but not prohibited
- 199   **3.13**  
200   **unspecified**  
201   indicates that this profile does not define any constraints for the referenced CIM element or operation  
202

## 203    4 Symbols and Abbreviated Terms

### 204    Experimental Maturity Level

205  
206 Some of the content considered for inclusion in *DNS Client Profile* has yet to receive sufficient review to  
207 satisfy the adoption requirements set forth by the Technical Committee within the DMTF. This content is  
208 presented here as an aid to implementers who are interested in likely future developments within this  
209 specification. The content marked experimental may change as implementation experience is gained.  
210 There is a high likelihood that it will be included in an upcoming revision of the specification. Until that  
211 time, it is purely informational, and is clearly marked within the text.  
212 A sample of the typographical convention for experimental content is included here:

213

---

226 Internet Protocol

## 227    5 Synopsis

228    **Profile Name:** *DNS Client*

229    **Version:** 1.0.0

230    **Organization:** DMTF

231    **CIM Schema Version:** 2.19

232    **Central Class:** CIM\_DNSProtocolEndpoint

233    **Scoping Class:** CIM\_ComputerSystem

234 The *DNS Client Profile* extends the management capability of referencing profiles by adding the capability  
235 to represent a DNS client in a managed system. This profile includes a specification of the DNS client, its  
236 configuration, its associated capabilities, and the profile registration information for this profile.

237 The Central Instance of the *DNS Client Profile* shall be an instance of CIM\_DNSProtocolEndpoint. The  
238 Scoping Instance shall be the instance of CIM\_ComputerSystem with which the Central Instance is  
239 associated through an instance of CIM\_HostedAccessPoint.

240 Table 1 identifies profiles on which this profile has a dependency.

241 **Table 1 – Referenced Profiles**

Profile Name	Organization	Version	Relationship	Behavior
<i>Profile Registration</i>	DMTF	1.0.0	Mandatory	None
<i>IP Interface</i>	DMTF	1.0.0	Mandatory	None
<i>DHCP Client</i>	DMTF	1.0.0	Optional	None

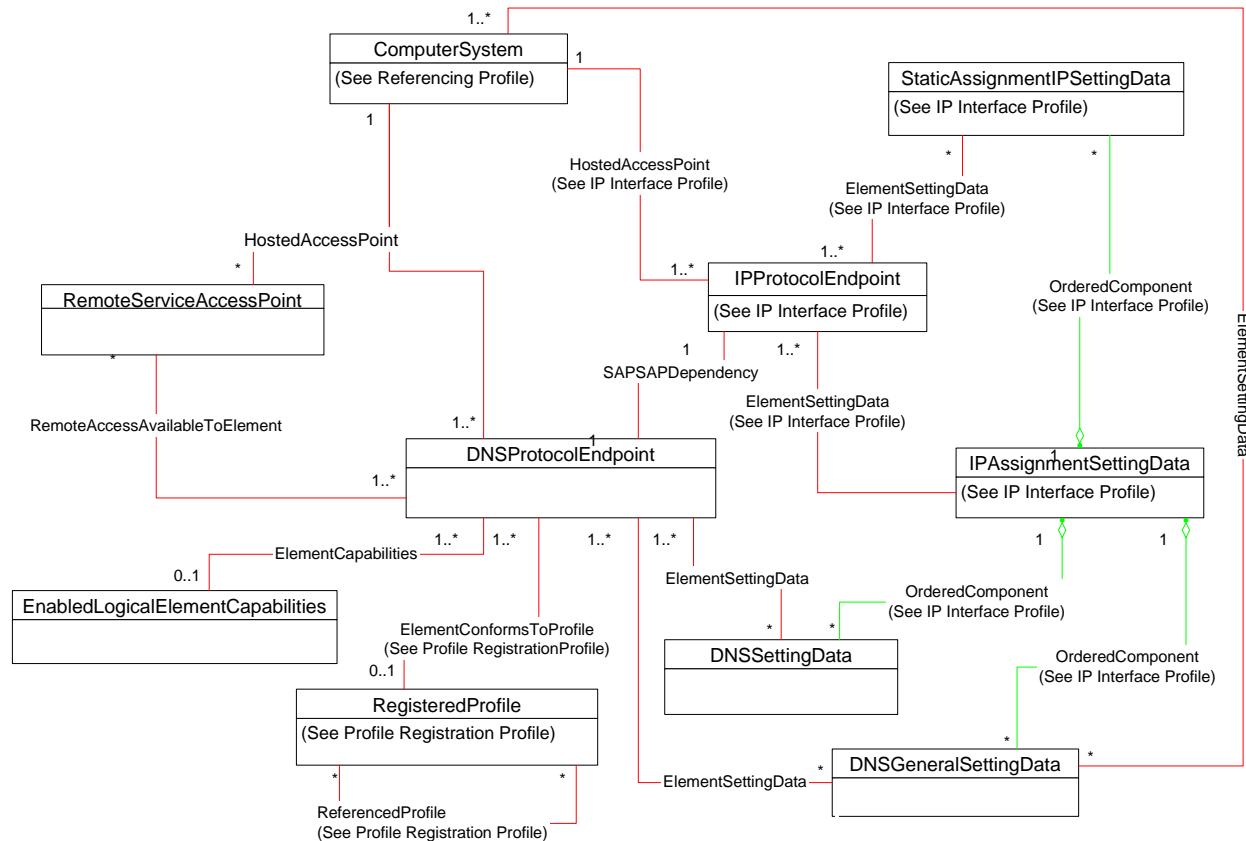

242 **6 Description**

243 The *DNS Client Profile* describes a DNS client in a managed system. The DNS client is represented by  
244 an instance of CIM\_DNSProtocolEndpoint. The DNS client has a relationship with exactly one IP  
245 interface. This relationship is indicated through an instance of the CIM\_SAPSAPDependency association.  
246 Configuration information for each interface is modeled in the CIM\_DNSProtocolEndpoint instance as well  
247 as in the CIM\_DNSSettingData instance.

248 The system-wide DNS configuration is modeled in the CIM\_DNSGeneralSettingData instance. In a  
249 system with multiple IP interfaces, only a single CIM\_DNSGeneralSettingData instance contains the  
250 active system-wide settings, while an instance of CIM\_DNSSettingData exists for each interface.

251 The DNS servers that the DNS client has been configured to use are modeled using an instance of  
252 CIM\_RemoteServiceAccessPoint. The actual DNS servers are not modeled in this profile.

253 Figure 1 represents the class schema for the *DNS Client Profile*. For simplicity, the prefix CIM\_ has been  
254 removed from the names of the classes.

255

256

**Figure 1 – DNS Client Profile: Class Diagram**

## 257 **7 Implementation**

258 This section details the requirements related to the arrangement of instances and properties of instances  
259 for implementations of this profile.

### 260 **7.1 DNS Client Representation**

261 The DNS client shall be modeled using an instance of CIM\_DNSProtocolEndpoint. The  
262 CIM\_DNSProtocolEndpoint shall be associated with exactly one instance of CIM\_IPProtocolEndpoint  
263 through an instance of the CIM\_SAPSAPDependency association.

264 The current configuration of the DNS client is modeled using properties of the CIM\_DNSProtocolEndpoint  
265 instance. One or more alternate configurations for the client may be instrumented. Requirements when  
266 modeling one or more alternate configurations are described in section 7.4.

#### 267 **7.1.1 CIM\_DNSProtocolEndpoint.DNSSuffixesToAppend**

268 The value of the CIM\_DNSProtocolEndpoint.DNSSuffixesToAppend property shall be zero or more  
269 strings, where each string identifies a DNS suffix to append when resolving a host name, and each string  
270 is formatted according to the preferred name syntax specified in IETF [RFC 1035](#).

271 **7.1.2 CIM\_DNSProtocolEndpoint.DHCPOptionsToUse**

272 The CIM\_DNSProtocolEndpoint.DHCPOptionsToUse property shall identify the DHCP options whose  
273 values will be used when values are retrieved by the DHCP client for the associated IP interface. When  
274 this property is not implemented, the use of DHCP assigned values is not supported by the DNS client.  
275 When this property is implemented and no values are specified, the DNS client is not using any DHCP  
276 assigned values for its configuration.

277 **7.1.3 DNS Client State Management Is Supported—Conditional**

278 Support for managing the state of the DNS client is optional behavior. This section describes the CIM  
279 elements and behaviors that shall be implemented when this behavior is supported.

280 **7.1.3.1 CIM\_EnabledLogicalElementCapabilities**

281 When state management is supported, exactly one instance of CIM\_EnabledLogicalElementCapabilities  
282 shall be associated with the CIM\_DNSProtocolEndpoint instance through an instance of  
283 CIM\_ElementCapabilities.

284 **7.1.3.1.1 CIM\_EnabledLogicalElementCapabilities.RequestedStatesSupported**

285 The RequestedStatesSupported property may contain zero or more of the following values: 2 (Enabled),  
286 3 (Disabled), or 11 (Reset).

287 **7.1.3.2 CIM\_DNSProtocolEndpoint.RequestedState**

288 When the CIM\_DNSProtocolEndpoint.RequestStateChange() method is successfully invoked, the value  
289 of the RequestedState property shall be the value of the RequestedState parameter. If the method is not  
290 successfully invoked, the value of the RequestedState property is indeterminate.

291 The CIM\_DNSProtocolEndpoint.RequestedState property shall have one of the values specified in the  
292 CIM\_EnabledLogicalElementCapabilities.RequestedStatesSupported property or a value of 5 (No  
293 Change).

294 **7.1.3.3 CIM\_DNSProtocolEndpoint.EnabledState**

295 When the RequestedState parameter has a value of 2 (Enabled) or 3 (Disabled) and the  
296 CIM\_DNSProtocolEndpoint.RequestStateChange() method completes successfully, the value of the  
297 EnabledState property shall equal the value of the CIM\_DNSProtocolEndpoint.RequestedState property.

298 If the method does not complete successfully, the value of the EnabledState property is indeterminate.

299 The EnabledState property shall have the value 2 (Enabled), 3 (Disabled), or 5 (Not Applicable).

300 **7.1.4 DNS Client State Management Is Not Supported**

301 This section describes the CIM elements and behaviors that shall be implemented when management of  
302 the DNS client state is not supported.

303 **7.1.4.1 CIM\_EnabledLogicalElementCapabilities**

304 When state management is not supported, exactly one instance of  
305 CIM\_EnabledLogicalElementCapabilities may be associated with the CIM\_DNSProtocolEndpoint  
306 instance through an instance of CIM\_ElementCapabilities.

307 **7.1.4.1.1 CIM\_EnabledLogicalElementCapabilities.RequestedStatesSupported**

308 The CIM\_EnabledLogicalElementCapabilities.RequestedStatesSupported property shall not contain any  
309 values.

310   **7.1.4.2 CIM\_DNSProtocolEndpoint.RequestedState**

311   The RequestedState property shall have the value 12 (Not Applicable).

312   **7.1.4.3 CIM\_DNSProtocolEndpoint.EnabledState**

313   The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), 5 (Not  
314   Applicable), or 6 (Enabled but Offline).

315   **7.1.5 Modifying ElementName Is Supported—Conditional**

316   The CIM\_DNSProtocolEndpoint.ElementName property may support being modified by the  
317   ModifyInstance operation; see section 8.4.2. This behavior is conditional. This section describes the CIM  
318   elements and behavior requirements when an implementation supports client modification of the  
319   CIM\_DNSProtocolEndpoint.ElementName property.

320   **7.1.5.1 CIM\_EnabledLogicalElementCapabilities**

321   An instance of CIM\_EnabledLogicalElementCapabilities shall be associated with the  
322   CIM\_DNSProtocolEndpoint instance through an instance of CIM\_ElementCapabilities.

323   **7.1.5.1.1 CIM\_EnabledLogicalElementCapabilities.ElementNameEditSupported**

324   The ElementNameEditSupported property shall have a value of TRUE.

325   **7.1.5.1.2 CIM\_EnabledLogicalElementCapabilities.MaxElementNameLen**

326   The MaxElementNameLen property shall be implemented.

327   **7.1.6 Modifying ElementName Is Not Supported**

328   This section describes the CIM elements and behaviors that shall be implemented when the  
329   CIM\_DNSProtocolEndpoint.ElementName does not support being modified by the ModifyInstance  
330   operation.

331   **7.1.6.1 CIM\_EnabledLogicalElementCapabilities**

332   An instance of CIM\_EnabledLogicalElementCapabilities may be associated with the  
333   CIM\_DNSProtocolEndpoint instance through an instance of CIM\_ElementCapabilities.

334   **7.1.6.1.1 CIM\_EnabledLogicalElementCapabilities.ElementNameEditSupported**

335   The ElementNameEditSupported property shall have a value of FALSE.

336   **7.1.6.1.2 CIM\_EnabledLogicalElementCapabilities.MaxElementNameLen**

337   The MaxElementNameLen property may be implemented. The MaxElementNameLen property is  
338   irrelevant in this context.

339   **7.2 DNS Server Representation**

340   A DNS client may be configured with the addresses of zero or more DNS servers to use for the resolution  
341   of names. An instance of CIM\_RemoteServiceAccessPoint shall exist for each DNS server that the DNS  
342   client is configured to use.

343 **7.2.1 CIM\_RemoteServiceAccessPoint.AccessInfo**

344 The value of the AccessInfo property of each instance of CIM\_RemoteServiceAccessPoint shall be the IP  
345 address of the DHCP server. If the value of CIM\_RemoteServiceAccessPoint.InfoFormat is 3 (IPv4  
346 Address), then the value of the property shall be expressed in dotted decimal notation as defined in IETF  
347 [RFC 1208](#).

348

---

349 **EXPERIMENTAL**

350 If the value of CIM\_RemoteServiceAccessPoint.InfoFormat is 4 (IPv6 Address), then the value of the  
351 property shall be expressed in the notation as defined in IETF RFC 4291, section 2.2.

352 **EXPERIMENTAL**

---

353 **7.2.2 CIM\_RemoteServiceAccessPoint.InfoFormat**

354 The value of the InfoFormat property shall be a value of 3 (IPv4 Address)

355

---

356 **EXPERIMENTAL**

357 or a value of 4 (IPv6 Address).

358 **EXPERIMENTAL**

---

359

360 **7.3 DNS Client-Server Relationship**

361 A DNS client may be configured with the addresses of multiple DNS servers. The DNS servers are  
362 specified as an ordered set. The ordering corresponds to the order in which the DNS client will access  
363 each DNS server in an attempt to resolve a name.

364 For each instance of CIM\_RemoteServiceAccessPoint, an instance of  
365 CIM\_RemoteAccessAvailableToElement shall associate the CIM\_RemoteServiceAccessPoint to the  
366 CIM\_DNSProtocolEndpoint that represents the DNS client. The existence of an instance of  
367 CIM\_RemoteAccessAvailableToElement is conditional on the existence of an instance of  
368 CIM\_RemoteServiceAccessPoint.

369 **7.3.1 CIM\_RemoteAccessAvailableToElement.OrderOfAccess**

370 For a given instance of CIM\_DNSProtocolEndpoint, a finite set of instances of  
371 CIM\_RemoteAccessAvailableToElement will exist such that the Dependent reference of the instance is  
372 the CIM\_DNSProtocolEndpoint instance and the Antecedent reference is an instance of  
373 CIM\_RemoteServiceAccessPoint where the AccessContext property has a value of 3.

374 For this set of instances, the values of the OrderOfAccess property of each instance shall form a positive,  
375 monotonically increasing sequence starting with a value of 1. The relative order of the value of the  
376 OrderOfAccess properties shall correspond to the relative order in which the DNS client will communicate  
377 with the represented DNS servers when performing name resolution.

## 378 **7.4 Alternate Configuration Management (Optional)**

379 Alternate configurations for an IP interface are described in the [IP Interface Profile](#). An implementation  
380 may support the management of an alternate DNS client configuration as part of the IP interface alternate  
381 configurations. This behavior is optional. When management of alternate DNS configurations is  
382 supported, the optional complete configuration behavior is mandatory.

383 When alternate configuration management of the DNS client is not supported, the current configuration of  
384 the DNS client shall not be affected when an alternate configuration for an IP interface is applied to the  
385 associated IP interface.

386 Some aspects of the configuration are specific to a particular IP interface. These aspects are modeled  
387 using CIM\_DNSSettingData. Other aspects of the complete configuration are applicable system wide.  
388 These aspects are modeled using CIM\_DNSGeneralSettingData. When alternate configuration  
389 management of the DNS client is supported, the current configuration of the DNS client shall not be  
390 affected when an alternate configuration for an IP interface is applied to the associated IP interface where  
391 no instance of CIM\_DNSSettingData or CIM\_DNSGeneralSettingData is associated with the  
392 CIM\_IPAssignmentSettingData instance.

393 The following subclauses specify the requirements when this optional behavior is implemented.

### 394 **7.4.1 CIM\_DNSSettingData.DNSServerAddresses**

395 The DNSServerAddresses property of the CIM\_DNSSettingData instance indicates the DNS servers that  
396 will be used. Each valid value of the DNSServerAddresses property shall be expressed in dotted decimal  
397 notation as defined in IETF [RFC 1208](#). Values shall occupy consecutive array positions beginning at  
398 index 0 (zero). The property shall contain zero or more values.

### 399 **7.4.2 CIM\_DNSSettingData.DHCPOptionsToUse**

400 The CIM\_DNSSettingData.DHCPOptionsToUse property shall identify the DHCP options whose values  
401 will be used when values are retrieved by the DHCP client for the associated IP interface. When this  
402 property is not implemented or is an empty array, no DHCP options will be used by the DNS client.

### 403 **7.4.3 CIM\_DNSGeneralSettingData Property Requirements**

404 When CIM\_DNSGeneralSettingData is instrumented, at least one of the following properties shall be  
405 implemented:

- 406 • AppendPrimarySuffixes
- 407 • AppendParentSuffixes
- 408 • DNSSuffixesToAppend

### 409 **7.4.4 CIM\_DNSGeneralSettingData.DNSSuffixesToAppend**

410 The value of the DNSSuffixesToAppend property of the CIM\_DNSGeneralSettingData class shall be zero  
411 or more strings, where each string identifies a DNS suffix to append when resolving a host name, and  
412 each string is formatted according to the preferred name syntax specified in IETF [RFC 1035](#).

### 413 **7.4.5 Alternate Interface-Specific Configuration**

414 At least one instance of CIM\_DNSSettingData shall be associated with at least one instance of  
415 CIM\_IPAssignmentSettingData through an instance of CIM\_OrderedComponent.

416 **7.4.6 Alternate System-Wide Configuration**

417 At least one instance of CIM\_DNSGeneralSettingData shall be associated with at least one instance of  
418 CIM\_IPAssignmentSettingData through an instance of CIM\_OrderedComponent.

419 **7.4.7 Applying an Alternate Configuration**

420 Whenever an alternate configuration is applied to an IP interface, the DNS client configuration may  
421 change. The alternate configuration may implicitly result in a change in the DNS client configuration when  
422 the alternate configuration uses DHCP to request a partial DNS configuration and the DNS client is  
423 configured to use values returned by DHCP. The alternate configuration may explicitly result in a change  
424 in the DNS client configuration when an instance of CIM\_DNSSettingData or  
425 CIM\_DNSGeneralSettingData is associated with the CIM\_IPAssignmentSettingData instance.

426 **8 Methods**

427 This section details the requirements for supporting intrinsic operations and extrinsic methods for the CIM  
428 elements defined by this profile.

429 **8.1 CIM\_DNSProtocolEndpoint.RequestStateChange()**

430 Invocation of the RequestStateChange() method changes the element's state to the value specified in the  
431 RequestedState parameter. The 2 (Enabled) and 3 (Disabled) values of the RequestedState parameter  
432 shall correspond to enabling or disabling the network interface represented by the  
433 CIM\_DNSProtocolEndpoint instance. A value of 11 (Reset) for the RequestedState parameter shall be  
434 equivalent to disabling and then enabling the network interface represented by the instance of  
435 CIM\_DNSProtocolEndpoint.

436 Detailed requirements for the RequestStateChange() method are specified in Table 2 and Table 3.

437 No standard messages are defined.

438 Invoking the RequestStateChange method multiple times could result in earlier requests being overwritten  
439 or lost.

440 **Table 2 – CIM\_DNSProtocolEndpoint.RequestStateChange() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method unsupported
2	Error occurred
0x1000	Job started: REF returned to started CIM_ConcreteJob

441 **Table 3 – CIM\_DNSProtocolEndpoint.RequestStateChange() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, REQ	RequestedState	uint16	Valid state values : 2 (Enabled) 3 (Disabled) 11 (Reset)
OUT	Job	CIM_ConcreteJob REF	Returned if job started
IN, REQ	TimeoutPeriod	datetime	Client specified maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed

442 **8.1.1.1 CIM\_DNSProtocolEndpoint.RequestStateChange() Conditional Support**

443 When an instance of CIM\_EnabledLogicalElementCapabilities is associated with the  
 444 CIM\_DNSProtocolEndpoint instance and the  
 445 CIM\_EnabledLogicalElementCapabilities.RequestedStatesSupported property contains at least one  
 446 value, the CIM\_DNSProtocolEndpoint.RequestStateChange() method shall be implemented and  
 447 supported. The CIM\_DNSProtocolEndpoint.RequestStateChange() method shall not return a value of 1  
 448 (Not Supported).

449 **8.2 Profile Conventions for Operations**

450 Support for operations for each profile class (including associations) is specified in the following  
 451 subclauses. Each subclause includes either the statement “All operations in the default list in section 8.2  
 452 are supported as described by [DSP0200 version 1.2](#)” or a table listing all the operations that are not  
 453 supported by this profile or where the profile requires behavior other than that described by [DSP0200](#)  
 454 [version 1.2](#).

455 The default list of operations is as follows:

- 456 • GetInstance
- 457 • Associators
- 458 • AssociatorNames
- 459 • References
- 460 • ReferenceNames
- 461 • EnumerateInstances
- 462 • EnumerateInstanceNames

463 A compliant implementation shall support all the operations in the default list for each class, unless the  
 464 “Requirement” column states something other than *Mandatory*.

465    **8.3 CIM\_DNSGeneralSettingData**

466    Table 4 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#) or  
 467    shall not be supported.

468                   **Table 4 – Operations: CIM\_DNSGeneralSettingData**

Operation	Requirement	Messages
ModifyInstance	Optional	None

469    **8.4 CIM\_DNSProtocolEndpoint**

470    Table 5 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#) or  
 471    shall not be supported.

472                   **Table 5 – Operations: CIM\_DNSProtocolEndpoint**

Operation	Requirement	Messages
ModifyInstance	Optional. See section 8.4.2.	None

473    **8.4.1 CIM\_DNSProtocolEndpoint – ModifyInstance Operation**

474    This section details the specific requirements for the ModifyInstance operation applied to an instance of  
 475    CIM\_DNSProtocolEndpoint. The ModifyInstance operation shall not modify any properties other than the  
 476    ElementName property. The ElementName property may be modified; requirements for modifying the  
 477    ElementName property are specified in section 8.4.2.

478    **8.4.2 CIM\_DNSProtocolEndpoint.ElementName Property**

479    When an instance of CIM\_EnabledLogicalElementCapabilities is associated with the  
 480    CIM\_DNSProtocolEndpoint instance and the  
 481    CIM\_EnabledLogicalElementCapabilities.ElementNameEditSupported property has a value of TRUE, the  
 482    implementation shall allow the ModifyInstance operation to change the value of the ElementName  
 483    property of the CIM\_DNSProtocolEndpoint instance. The ModifyInstance operation shall enforce the  
 484    length restriction specified in the MaxElementNameLen property of the  
 485    CIM\_EnabledLogicalElementCapabilities instance.

486    When no instance of CIM\_EnabledLogicalElementCapabilities is associated with the  
 487    CIM\_DNSProtocolEndpoint instance, or the ElementNameEditSupported property of the  
 488    CIM\_EnabledLogicalElementCapabilities has a value of FALSE, the implementation shall not allow the  
 489    ModifyInstance operation to change the value of the ElementName property of the  
 490    CIM\_DNSProtocolEndpoint instance.

491    **8.5 CIM\_DNSSettingData**

492    Table 6 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#) or  
 493    shall not be supported.

494                   **Table 6 – Operations: CIM\_DNSSettingData**

Operation	Requirement	Messages
ModifyInstance	Optional	None

495    **8.6 CIM\_ElementCapabilities**

496    Table 7 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#) or  
 497    shall not be supported.

498                   **Table 7 – Operations: CIM\_ElementCapabilities**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

499    **8.7 CIM\_ElementSettingData**

500    Table 8 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#) or  
 501    shall not be supported.

502                   **Table 8 – Operations: CIM\_ElementSettingData**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

503    **8.8 CIM\_EnabledLogicalElementCapabilities**

504    All operations in the default list in section 8.2 are supported as described by [DSP0200 version 1.2](#).

505    **8.9 CIM\_SAPSAPDependency**

506    Table 9 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#) or  
 507    shall not be supported.

508                   **Table 9 – Operations: CIM\_SAPSAPDependency**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

509    **8.10 CIM\_HostedAccessPoint**

510    Table 10 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#)  
 511    or shall not be supported.

512    **Table 10 – Operations: CIM\_HostedAccessPoint**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

513    **8.11 CIM\_RemoteServiceAccessPoint**

514    All operations in the default list in section 8.2 are supported as described by [DSP0200 version 1.2](#).

515    **8.12 CIM\_RemoteAccessAvailableToElement**

516    Table 11 lists operations that either have special requirements beyond those from [DSP0200 version 1.2](#)  
 517    or shall not be supported.

518    **Table 11 – Operations: CIM\_RemoteAccessAvailableToElement**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

519    **9 Use Cases**

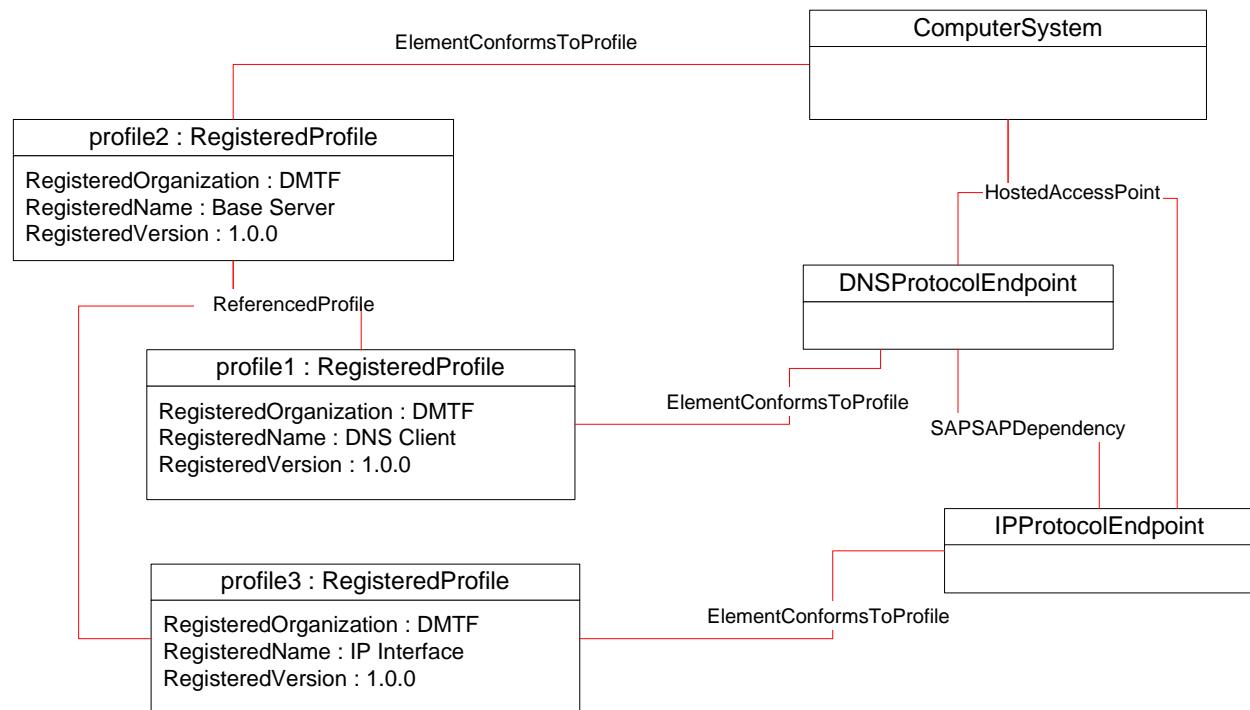

520    This section contains object diagrams and use cases for the *DNS Client Profile*.

521    **9.1 Object Diagrams**

522    The object diagram in Figure 2 shows how instances of CIM\_RegisteredProfile are used to identify the  
 523    version of the *DNS Client Profile* with which an instance of CIM\_DNSProtocolEndpoint and its associated  
 524    instances are conformant. An instance of CIM\_RegisteredProfile exists for each profile instrumented in  
 525    the system.

- 526
  - profile2 identifies the DMTF *Base System Profile* version 1.0.0.
  - profile3 identifies the DMTF [\*IP Interface Profile\*](#) version 1.0.0.
  - profile1 identifies the DMTF *DNS Client Profile* version 1.0.0.

529    The CIM\_DNSProtocolEndpoint instance is associated with profile1, indicating that the instance of  
 530    CIM\_DNSProtocolEndpoint is conformant with the DMTF *DNS Client Profile* version 1.0.0. The instance  
 531    of CIM\_ComputerSystem is conformant with the DMTF *Base System Profile* version 1.0.0, as indicated by  
 532    the CIM\_ElementConformsToProfile association to profile2. Likewise, the CIM\_IPProtocolEndpoint  
 533    instance is conformant with the DMTF [\*IP Interface Profile\*](#) version 1.0.0, as indicated by the association to  
 534    profile3.

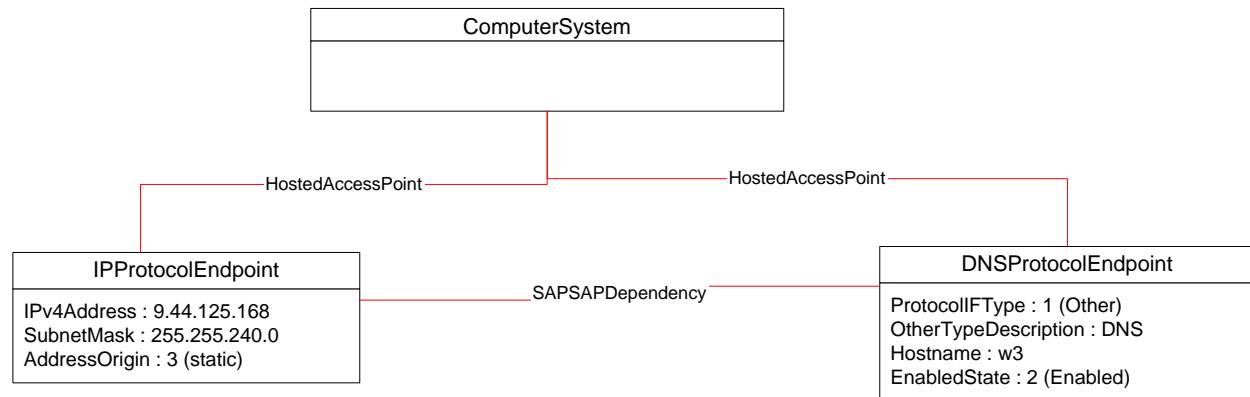

535

536

**Figure 2 – Registered Profile**

537 Figure 3 is an object diagram for an IP interface with DNS client support. Management of the DNS client  
 538 is limited to indicating the host name bound to the IP interface. The DNS client for the IP interface is  
 539 represented by the instance of CIM\_DNSProtocolEndpoint. In this implementation, the current host name  
 540 being used can be queried and the DNS client can be enabled and disabled.

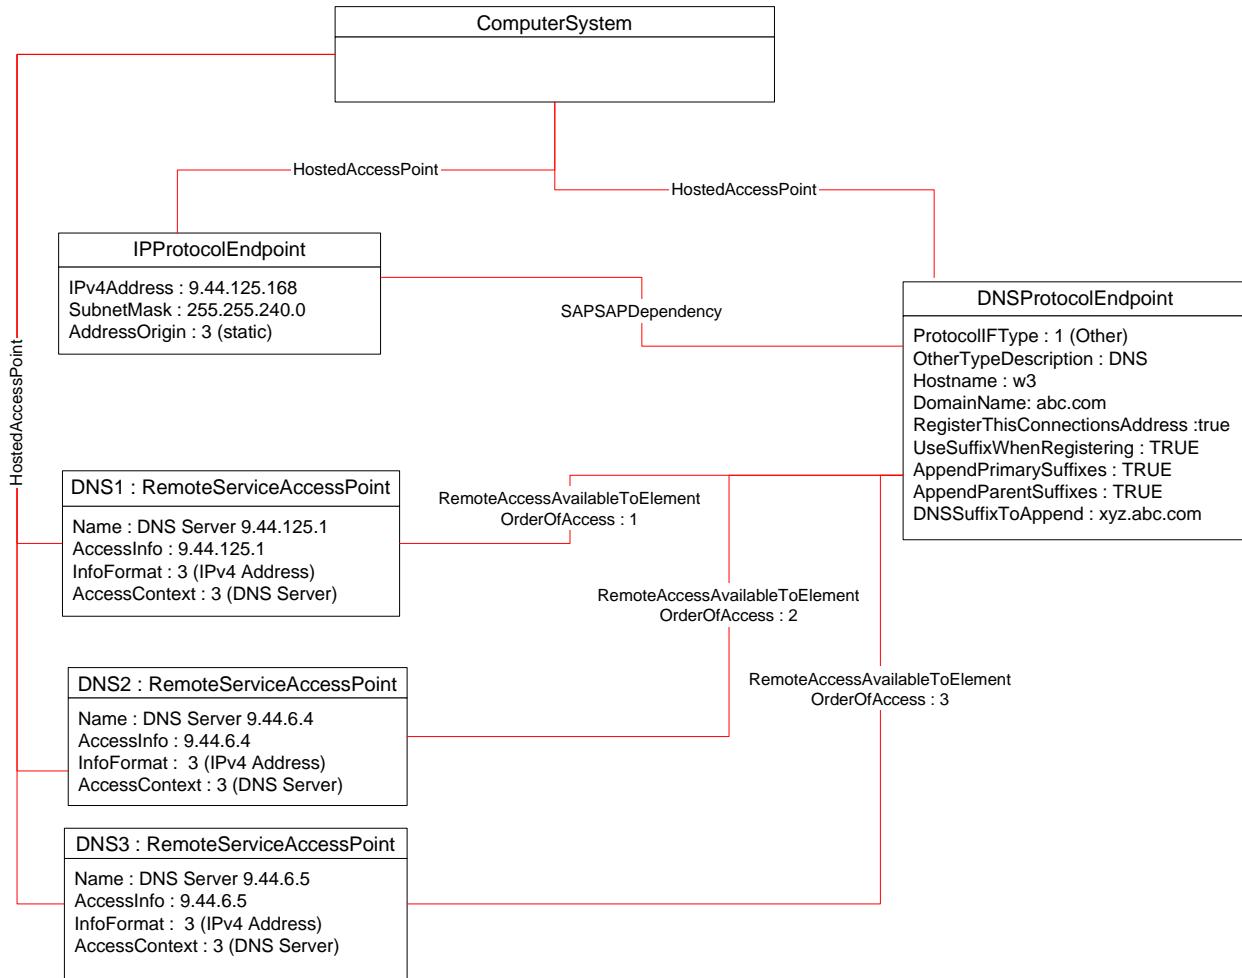

541

542

**Figure 3 – Host Name Only**

543 Figure 4 is an object diagram for an IP interface that has DNS client support. This implementation  
 544 provides a complete model of the DNS client configuration. Each instance of  
 545 CIM\_RemoteServiceAccessPoint represents a DNS server that the client has been configured to use.  
 546 The CIM\_DNSProtocolEndpoint instance contains the entire configuration of the DNS client.

547

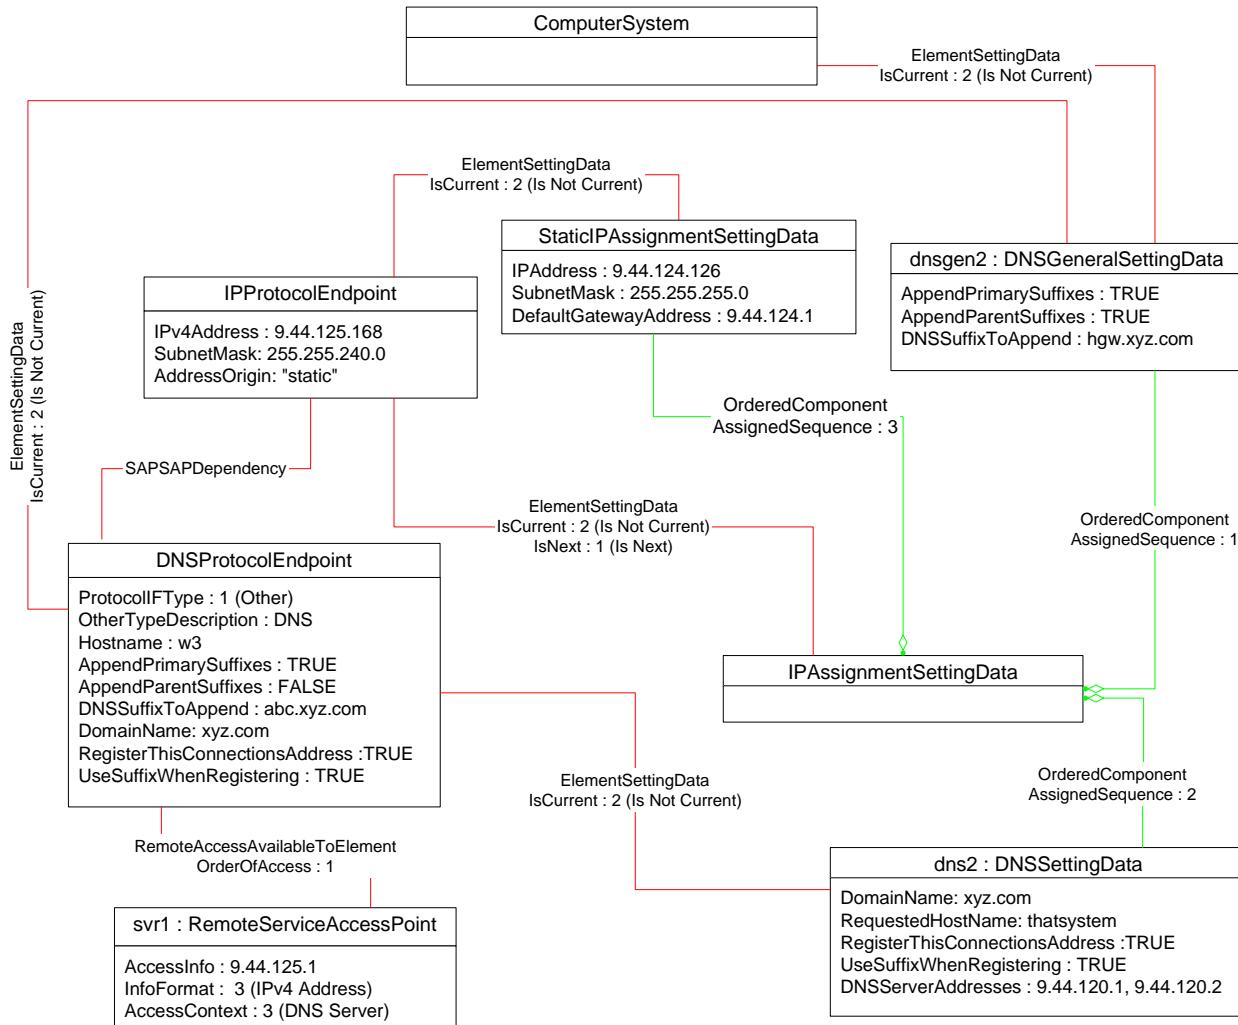

548

**Figure 4 – DNS Configuration**

549 The object diagram in Figure 5 is for an implementation in which the optional behavior of managing  
 550 alternate configurations is supported. This diagram illustrates a more complete implementation than  
 551 Figure 4. The current configuration of the DNS client is reflected by the properties of the  
 552 CIM\_DNSProtocolEndpoint instance.

553 dns2 and dns3 contain the alternate configuration for the DNS client that will be used if the instance of  
 554 CIM\_IPAssignmentSettingData that represents an alternate configuration that could be applied to the IP  
 555 interface is applied to the IP interface.

556 Note that to reduce clutter, the CIM\_HostedAccessPoint associations are not shown. Neither are the  
 557 CIM\_IPConfigurationService instance and its related associations.

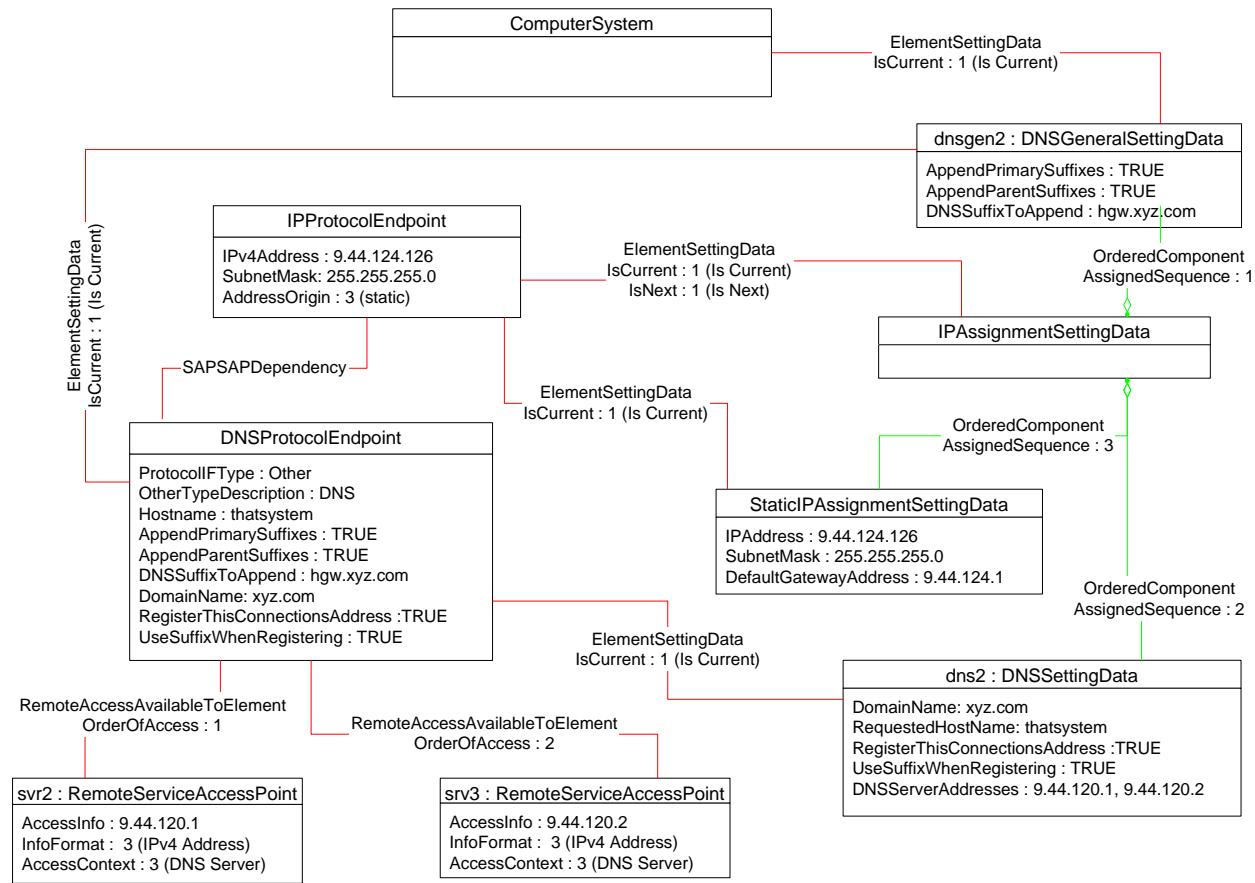

558

559

**Figure 5 – DNS Configuration with Alternate Configuration**

560 The object diagram in Figure 6 is for the same implementation as that of Figure 5 after the alternate configuration has been applied. The property values of the CIM\_DNSProtocolEndpoint instance have 561 been updated to reflect the settings applied when the alternate configuration was applied. The IsCurrent 562 property of the instances of CIM\_ElementSettingData that associate dns2 and dnsgen2 with the 563 CIM\_DNSProtocolEndpoint instance have the value 1 (Is Current), which indicates that these settings 564 were the last applied.

566

567

**Figure 6 – Alternate Configuration Applied**

## 568 9.2 Determine the Current DNS Configuration

569 A client can determine the current DNS client configuration for an IP interface represented by an instance  
570 of CIM\_IPProtocolEndpoint as follows:

- 571 1) Starting at the instance of CIM\_IPProtocolEndpoint, use the CIM\_SAPSAPDependency  
572 association to find the associated instance of CIM\_DNSProtocolEndpoint.
- 573 2) The host name associated with the IP endpoint is the value of the Hostname property of the  
574 CIM\_DNSProtocolEndpoint instance.
- 575 3) Find each instance of CIM\_RemoteServiceAccessPoint that is associated through an instance  
576 of CIM\_RemoteAccessAvailableToElement with the CIM\_DNSProtocolEndpoint instance where  
577 the value of the AccessContext property of the CIM\_RemoteServiceAccessPoint instance is 3  
578 (DNS Server).
- 579 4) Query the value of the OrderOfAccess property of each instance of  
580 CIM\_RemoteAccessAvailableToElement to determine the relative order of access of the DNS  
581 client to each of the DNS servers represented by the CIM\_RemoteServiceAccessPoint  
582 instances. The AccessInfo property of each instance of CIM\_RemoteServiceAccessPoint  
583 identifies a DNS server.
- 584 5) Query the remaining properties of the CIM\_DNSProtocolEndpoint instance to determine the  
585 complete DNS client configuration.

### 586    9.3 Determine Support for an Alternate DNS Configuration

587    A client can determine whether the implementation supports an alternate DNS configuration as follows:

- 588        1) Find the instance of CIM\_IPProtocolEndpoint that is associated with the  
589            CIM\_DNSProtocolEndpoint instance through an instance of CIM\_SAPSAPDependency.
- 590        2) Find the instances of CIM\_IPAssignmentSettingData that are associated with the  
591            CIM\_IPProtocolEndpoint instance through an instance of CIM\_ElementSettingData.
- 592        3) For each instance of CIM\_IPAssignmentSettingData, determine if an instance of  
593            CIM\_DNSSettingData or CIM\_DNSGeneralSettingData is associated with the instance through  
594            an instance of CIM\_OrderedComponent.

595    If an instance of CIM\_DNSSettingData or CIM\_DNSGeneralSettingData is found, the management of an  
596    alternate DNS configuration is supported. The instance of CIM\_IPAssignmentSettingData represents an  
597    alternate IP configuration with DNS support.

### 598    9.4 Modify the DNS Configuration

599    A client can modify the DNS configuration as follows:

- 600        1) Determine if management of an alternate DNS configuration is supported as specified in  
601            section 9.3.
- 602        2) Modify the properties of the CIM\_DNSGeneralSettingData and CIM\_DNSSettingData instances  
603            to have the desired configuration.
- 604        3) Apply the alternate configuration to the IP interface using one of the methods described in the [IP  
Interface Profile](#).

### 606    9.5 Determine Whether ElementName Can Be Modified

607    A client can determine whether it can modify the ElementName of an instance of  
608    CIM\_DNSProtocolEndpoint as follows:

- 609        1) Find the CIM\_EnabledLogicalElementCapabilities instance that is associated with the  
610            CIM\_DNSProtocolEndpoint instance.
- 611        2) Query the value of the ElementNameEditSupported property of the  
612            CIM\_EnabledLogicalElementCapabilities instance. If the value is TRUE, the client can modify  
613            the ElementName property of the target instance.

### 614    9.6 Determine Whether State Management Is Supported

615    A client can determine whether state management is supported for an instance of  
616    CIM\_DNSProtocolEndpoint as follows:

- 617        1) Find the CIM\_EnabledLogicalElementCapabilities instance that is associated with the  
618            CIM\_DNSProtocolEndpoint instance.
- 619        2) Query the value of the RequestedStatesSupported property. If at least one value is specified,  
620            state management is supported.

## 621 **10 CIM Elements**

622 Table 12 shows the instances of CIM Elements for this profile. Instances of the CIM Elements shall be  
 623 implemented as described in Table 12. Sections 7 (“Implementation”) and 8 (“Methods”) may impose  
 624 additional requirements on these elements.

625 **Table 12 – CIM Elements: DNS Client Profile**

<b>Element Name</b>	<b>Requirement</b>	<b>Description</b>
<b>Classes</b>		
CIM_DNSGeneralSettingData	Optional	See section 10.1.
CIM_DNSProtocolEndpoint	Mandatory	See section 10.2.
CIM_DNSSettingData	Optional	See section 10.3.
CIM_ElementCapabilities	Conditional	See section 10.4.
CIM_ElementSettingData	Optional	See sections 10.5 and 10.6.
CIM_EnabledLogicalElementCapabilities	Optional	See section 10.7.
CIM_SAPSAPDependency	Mandatory	See section 10.8.
CIM_HostedAccessPoint	Mandatory	See sections 10.9 and 10.10.
CIM_RemoteAccessAvailableToElement	Conditional	See sections 7.3 and 10.11.
CIM_RemoteServiceAccessPoint	Optional	See sections 7.2 and 10.12.
CIM_RegisteredProfile	Mandatory	See section 10.13.
<b>Indications</b>		
None defined in this profile		

### 626 **10.1 CIM\_DNSGeneralSettingData**

627 CIM\_DNSGeneralSettingData contains the DNS settings that are applicable system wide. Table 13  
 628 contains the requirements for elements of this class.

629 **Table 13 – Class: CIM\_DNSGeneralSettingData**

<b>Elements</b>	<b>Requirement</b>	<b>Notes</b>
InstanceId	Mandatory	<b>Key</b>
AddressOrigin	Mandatory	Matches 2 (Not Applicable)
AppendPrimarySuffixes	Optional	None
AppendParentSuffixes	Optional	None
DNSuffixesToAppend	Optional	See section 7.1.1.
ElementName	Mandatory	Pattern “.+”

630 **10.2 CIM\_DNSProtocolEndpoint**

631 CIM\_DNSProtocolEndpoint represents a DNS client associated with an IP interface. Table 14 contains  
 632 the requirements for elements of this class.

633

**Table 14 – Class: CIM\_DNSProtocolEndpoint**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	<b>Key</b>
CreationClassName	Mandatory	<b>Key</b>
SystemName	Mandatory	<b>Key</b>
Name	Mandatory	<b>Key</b>
NameFormat	Mandatory	Pattern “.+”
Hostname	Mandatory	This property shall conform to the NAME restriction identified in <a href="#">DOD Internet Host Table Specification</a> .
ProtocolIFTType	Mandatory	This property shall have a value of 1 (Other).
OtherTypeDescription	Mandatory	This property shall have a value of “DNS”.
RequestedState	Mandatory	See sections 7.1.3.2 and 7.1.4.2.
EnabledState	Mandatory	See sections 7.1.3.3 and 7.1.4.3.
ElementName	Mandatory	Pattern “.+”
AppendPrimarySuffixes	Optional	None
AppendParentSuffixes	Optional	None
DNSSuffixesToAppend	Optional	See section 7.1.1.
DomainName	Optional	This property shall be formatted according to the preferred name syntax specified in <a href="#">Domain Names – Implementation and Specification</a> .
UseSuffixWhenRegistering	Optional	None
RegisterThisConnectionsAddress	Optional	None
DHCPOptionsToUse	Optional	See section 7.1.2.

634 **10.3 CIM\_DNSSettingData**

635 CIM\_DNSSettingData represents the DNS client configuration that is specific to a particular IP interface.  
 636 Table 15 contains the requirements for elements of this class.

637 **Table 15 – Class: CIM\_DNSSettingData**

Elements	Requirement	Notes
InstanceID	Mandatory	<b>Key</b>
AddressOrigin	Mandatory	Matches 2 (Not Applicable)
ElementName	Mandatory	Pattern “.+”
RequestedHostname	Mandatory	This property shall conform to the NAME restriction identified in <a href="#">DOD Internet Host Table Specification</a> .
DNSServerAddresses	Mandatory	See section 7.4.1.
DomainName	Optional	This property shall be formatted according to the preferred name syntax specified in <a href="#">Domain Names – Implementation and Specification</a> .
UseSuffixWhenRegistering	Optional	None
RegisterThisConnectionsAddress	Optional	None

638 **10.4 CIM\_ElementCapabilities**

639 CIM\_ElementCapabilities associates an instance of CIM\_EnabledLogicalElementCapabilities with an  
 640 instance of CIM\_DNSProtocolEndpoint. CIM\_ElementCapabilities is only supported if  
 641 CIM\_EnableLogicalElementCapabilities is supported. Table 16 contains the requirements for elements of  
 642 this class.

643 **Table 16 – Class: CIM\_ElementCapabilities**

Elements	Requirement	Notes
ManagedElement	Mandatory	<b>Key</b> This property shall be a reference to an instance of CIM_DNSProtocolEndpoint. Cardinality 1..*
Capabilities	Mandatory	<b>Key</b> This property shall be a reference to the instance of CIM_EnabledLogicalElementCapabilities. Cardinality 0..1

## 644 **10.5 CIM\_ElementSettingData—DNSGeneralSettingData**

645 CIM\_ElementSettingData associates instances of CIM\_DNSGeneralSettingData with the  
 646 CIM\_ComputerSystem instance for which they provide configuration. CIM\_ElementSettingData in this  
 647 case is only supported if CIM\_DNSGeneralSettingData is supported. Table 17 contains the requirements  
 648 for elements of this class.

649 **Table 17 – Class: CIM\_ElementSettingData—DNSGeneralSettingData**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to the Scoping Instance or the Central Instance. Cardinality 1..*
Dependent	Mandatory	This property shall be a reference to an instance of CIM_DNSGeneralSettingData. Cardinality *
IsCurrent	Mandatory	Matches 1 (Is Current) or 2 (Is Not Current)

## 650 **10.6 CIM\_ElementSettingData—DNSSettingData**

651 CIM\_ElementSettingData associates instances of CIM\_DNSSettingData with the  
 652 CIM\_DNSProtocolEndpoint for which they provide configuration. CIM\_ElementSettingData in this case is  
 653 only supported if CIM\_DNSSettingData is supported. Table 18 contains the requirements for elements of  
 654 this class.

655 **Table 18 – Class: CIM\_ElementSettingData—DNSSettingData**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to the Central Instance. Cardinality 1..*
Dependent	Mandatory	This property shall be a reference to an instance of CIM_DNSSettingData. Cardinality *
IsCurrent	Mandatory	Matches 1 (Is Current) or 2 (Is Not Current)

## 656 **10.7 CIM\_EnabledLogicalElementCapabilities**

657 CIM\_EnabledLogicalElementCapabilities indicates support for managing the state of the network port.  
 658 Table 19 contains the requirements for elements of this class.

659 **Table 19 – Class: CIM\_EnabledLogicalElementCapabilities**

Elements	Requirement	Notes
InstanceId	Mandatory	<b>Key</b>
RequestedStatesSupported	Mandatory	See sections 7.1.3.1.1 and 7.1.4.1.1.
ElementNameEditSupported	Mandatory	See sections 7.1.5.1.1 and 7.1.6.1.1.
MaxElementNameLen	Conditional	See sections 7.1.5.1.2 and 7.1.6.1.2.

## 660 **10.8 CIM\_SAPSAPDependency**

661 CIM\_SAPSAPDependency relates the CIM\_IPProtocolEndpoint instance to the  
 662 CIM\_DNSProtocolEndpoint instance that provides functionality related to it. Table 20 contains the  
 663 requirements for elements of this class.

664 **Table 20 – Class: CIM\_SAPSAPDependency**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of CIM_IPProtocolEndpoint. Cardinality 1
Dependent	Mandatory	This property shall be a reference to the Central Instance. Cardinality 1

## 665 **10.9 CIM\_HostedAccessPoint—DNSProtocolEndpoint**

666 CIM\_HostedAccessPoint relates the CIM\_DNSProtocolEndpoint instances to their scoping  
 667 CIM\_ComputerSystem instance. Table 21 contains the requirements for elements of this class.

668 **Table 21 – Class: CIM\_HostedAccessPoint—DNSProtocolEndpoint**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to the Scoping Instance. Cardinality 1
Dependent	Mandatory	This property shall be a reference to the Central Instance. Cardinality 1..*

## 669 **10.10 CIM\_HostedAccessPoint—RemoteServiceAccessPoint**

670 CIM\_HostedAccessPoint relates the CIM\_RemoteServiceAccessPoint instances to their scoping  
 671 CIM\_ComputerSystem instance. Table 22 contains the requirements for elements of this class.

672 **Table 22 – Class: CIM\_HostedAccessPoint—RemoteServiceAccessPoint**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to the Scoping Instance. Cardinality 1
Dependent	Mandatory	This property shall be a reference to an instance of CIM_RemoteServiceAccessPoint. Cardinality *

673 **10.11 CIM\_RemoteAccessAvailableToElement**

674 CIM\_RemoteAccessAvailableToElement associates CIM\_ManagedElement instances scoped to the  
 675 managed system with instances of CIM\_RemoteServiceAccessPoint that provide function to them.  
 676 Table 23 contains the requirements for elements of this class.

677 **Table 23 – Class: CIM\_RemoteAccessAvailableToElement**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of CIM_RemoteServiceAccessPoint. Cardinality *
Dependent	Mandatory	This property shall be a reference to the Central Instance. Cardinality 1..*
OrderOfAccess	Mandatory	See section 7.3.1.

678 **10.12 CIM\_RemoteServiceAccessPoint**

679 CIM\_RemoteServiceAccessPoint represents the managed system's view of the DNS servers. Table 24  
 680 contains the requirements for elements of this class.

681 **Table 24 – Class: CIM\_RemoteServiceAccessPoint**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	<b>Key</b>
CreationClassName	Mandatory	<b>Key</b>
SystemName	Mandatory	<b>Key</b>
Name	Mandatory	<b>Key</b>
NameFormat	Mandatory	Pattern (".+")
AccessContext	Mandatory	Matches 3 (DNS Server)
AccessInfo	Mandatory	See section 7.2.1.
InfoFormat	Mandatory	See section 7.2.2.
ElementName	Mandatory	Pattern ".+"

682 **10.13 CIM\_RegisteredProfile**

683 CIM\_RegisteredProfile identifies the *DNS Client Profile* in order for a client to determine whether an  
684 instance of CIM\_DNSProtocolEndpoint is conformant with this profile. The CIM\_RegisteredProfile class is  
685 defined by the [\*Profile Registration Profile\*](#). With the exception of the mandatory values specified for the  
686 properties in Table 25, the behavior of the CIM\_RegisteredProfile instance is in accordance with the  
687 [\*Profile Registration Profile\*](#).

688 **Table 25 – Class: CIM\_RegisteredProfile**

Elements	Requirement	Notes
RegisteredName	Mandatory	This property shall have a value of "DNS Client".
RegisteredVersion	Mandatory	This property shall have a value of "1.0.0".
RegisteredOrganization	Mandatory	This property shall have a value of 2 ("DMTF").

689 NOTE: Previous versions of this document included the suffix "Profile" for the RegisteredName value. If  
690 implementations querying for the RegisteredName value find the suffix "Profile", they should ignore the suffix, with  
691 any surrounding white spaces, before any comparison is done with the value as specified in this document.
