**New PMCI Tools Task Force**

DMTF has launched a new Task Force under the Platform Management Components (PMCI) Working Group to develop a set of new tools to support Platform Management Components (PMCI) implementations. The goal of the PMCI Tools Task Force is to define a suite of tools to support the implementation of PMCI. The Task Force will focus on developing tools that can be used to verify the correctness of PMCI implementations and to assist implementers in understanding the requirements of the PMCI Standard. The Task Force will also work on developing tools to support the testing of PMCI implementations and to assist implementers in understanding the requirements of the PMCI Standard. The Task Force will also work on developing tools to support the testing of PMCI implementations and to assist implementers in understanding the requirements of the PMCI Standard.

**SNIA's Storage Developer Conference Will Be Virtual**

Taking place September 22-23, 2020, SNIA's Storage Developer Conference (SDC) brings the storage developer community together to collaborate and learn about advancements in storage management, storage networking, and cloud storage. While we were disappointed to postpone this year's event, the online format brings together thought leaders from the storage industry to share their insights and expertise.

**SNIA's Platform Management Components (PMCI) Working Group**

The PMCI Working Group develops specifications for Platform Management Components (PMCI) as defined by the Platform Management Architecture (PMA). The PMA defines a set of services that are provided by management software to manage platform components. The PMCI Working Group develops specifications for the Platform Management Components (PMCI) to enable the management of platform components.

**Upcoming Events**

- **September 23, 2020**
  - SNIA's Storage Developer Conference (SDC)

---

**New Redfish Educational White Paper Now Available**

The Redfish® Forum has released a new White Paper titled "Open Source Software and Redfish". This White Paper provides an overview of the role of open source software in the Redfish ecosystem and how it contributes to the development of Redfish specifications. The White Paper also includes a list of open source Redfish projects and organizations that are involved in the development of Redfish specifications.

**About DMTF**

DMTF is a leading technology standards organization dedicated to developing open, interoperable specifications that promote the integration of IT and OT infrastructures. DMTF's mission is to accelerate innovation and enable business transformation in the areas of cloud, IoT, microservices, security, and automation. DMTF's standards are used by organizations worldwide to improve the interoperability of IT and OT products and services.
