Redfish Release 2023.2 Now Available – New Updates!

Our team has been working diligently on the Redfish Release 2023.2, and we're excited to announce its availability now! This release introduces new features and enhancements, with a focus on improving the usability and functionality of Redfish. The Redfish 2023.2 release is now available to download.

Key highlights of the Redfish 2023.2 release include:
- Support for Redfish 2023.2 messages.
- Redfish 2023.2 implementation for its conformance to the Redfish messages.
- Support for the Redfish Requester and Responder.
- The Redfish service, as well as other consumers of the standard, will benefit from the Redfish Property Guide.
- Each revision in Redfish 2023.2.
- The Redfish Release History.

Additionally, it helps avoid re-defining property names already in use. Includes example payloads for each resource type.

Check out the detailed descriptions of the changes in Redfish 2023.2 at the following link:
