Schema and Registry Guide documents

- **RENAMED** Redfish Data Model Specification (DSP0268)
  - Document was previous titled “Redfish Schema Supplement”
  - Now includes normative statements (“LongDescription”) and informative description details from schema in a single document
  - Intended for both Redfish Service and client-side developers

- **Redfish Resource and Schema Guide** (DSP2046)
  - Presents schema (data model) contents in a more friendly format for end users
  - Includes example payloads for each resource type

- **Redfish Message Registry Guide** (DSP2065)
  - Presents message registry definitions in a more human-readable format
  - Includes summary table and individual message details

- **Redfish Property Guide** (DSP2053)
  - Provides an alphabetical list of all properties defined in Redfish schema
  - Useful for schema writers to locate existing definitions or properties
  - Helps avoid re-defining property names already in use
NEW SecurityPolicy Resource

- Provides a central point to configure the security policy of a manager
  - Each Manager resource can contain a SecurityPolicy resource
- Configures SPDM-related connection settings for the manager
  - Enable/disable SPDM
  - Enable/disable secure sessions
  - Allowed/denied SPDM versions and algorithms
  - Trusted/revoked device and CA certificates for SPDM devices
  - For more information, see the Security Protocols and Data Models Working Group: https://www.dmtf.org/standards/spdm
- Configures TLS-related connection settings for the manager
  - Allowed/denied TLS versions and algorithms
  - Trusted/revoked server and CA certificates when the manager acts as a TLS client
NEW TrustedComponent Resource

- Represents a security device for establishing trust
  - Examples include: a TPM, external hardware root of trust, embedded hardware root of trust
- Collection of TrustedComponent resources can be found subordinate to the Chassis resource
  - Allows for a client to discover containment hierarchy of these devices
- Each TrustedComponent resource contains inventory-related information about the device
  - Part number, serial number, model, and other FRU information
  - Certificates installed on the device
  - Software images installed on the device
Creating (POST) EthernetInterface Resources

- *EthernetInterfaceCollection* allows for POST operations
  - Clients can create a VLAN based off an existing interface (replaces the deprecated *VLanNetworkInterfaceCollection* resource)
  - Clients can create interface teams or bonds from a set of interfaces
- *TeamMode* and *RelatedInterfaces* were added to *EthernetInterface*
  - Clients provide these properties in the POST operation
  - *TeamMode*: The teaming/bonding policy for the new interface
  - *RelatedInterfaces*: The parent interface for the new VLAN or the set of interfaces to team/bond
- Existing properties, such as *VLAN*, *IPv4Addresses*, and *IPv4StaticAddresses*, are used in the same manner as physical interfaces
Manager Network Ports

- **DedicatedNetworkPorts** added to Manager
  - Represents physical network ports on the manager
  - Example: 1GbE MAC on a BMC

- **SharedNetworkPorts** added to Manager
  - Represents physical network ports on the manager that are shared with a host system
  - Example: Shared port provided via NCSI from a host system NIC
  - Collection members reference Port resources found in NetworkAdapter

- Added links between EthernetInterface and Port
  - Links are only provided when there is a physical association between a port and Ethernet interface
  - Allows a client to find port attributes of an Ethernet interface, such as LLDP information
Manager Network Ports

- **Chassis**
  - **1U**
  - **Network Adapters**
  - **Ports**
- **Managers**
  - **BMC**
  - **Shared Network Ports**
  - **Dedicated Network Ports**
  - **Ethernet Interfaces**
  - **eth0**
  - **eth1**

**Resources**:
- Collection resource
- Singleton resource
- Subordinate resource
- Related resource
