84

Introduction

85 This document presents a collection of IDs and codes that are used across the Management Component
86 Transport Protocol (MCTP) and transport binding specifications.

87 The MCTP defines a communication model intended to facilitate communication between:

- 88 • Management controllers and other management controllers
- 89 • Management controllers and management devices

90 The communication model includes a message format, transport description, message exchange
91 patterns, and configuration and initialization messages.

92 The *MCTP Base Protocol Specification* ([DSP0236](#)) describes the protocol and commands used for
93 communication within and initialization of an MCTP network. Associated with the *Base Protocol*
94 *Specification* are transport binding specifications that define how the MCTP base protocol and MCTP
95 control commands are implemented on a particular physical transport type and medium.
96

97 Management Component Transport Protocol (MCTP) IDs and 98 Codes

99 1 Scope

100 The *Management Component Transport Protocol (MCTP) IDs and Codes* document provides a
101 consolidated list of major IDs and codes used across the MCTP protocol and transport binding
102 specifications. Only IDs and codes that are required by a particular specification should be included in
103 that specification. IDs and codes values for other specifications should not be repeated for reference.
104 Instead, a reference to this specification should be provided.

105 The following is an overview of the different sets of codes and identifiers (enumeration values) that are
106 specified in this document:

- 107 • **MCTP message type codes**
108 Collection of the message type codes used for MCTP messages
- 109 • **MCTP physical medium identifiers**
110 Collection of identifiers for the different types of physical media that have been defined
- 111 • **MCTP physical transport binding identifiers**
112 Collection of identifiers for the specifications that define the operation, formatting, addressing,
113 and encapsulation of MCTP packets over different physical media
- 114 • **MCTP host interface type identifiers**
115 Collection of identifiers for the different physical interfaces used to transfer MCTP packets
116 between the host and the management controller

117 2 Normative references

118 The following referenced documents are indispensable for the application of this document. For dated or
119 versioned references, only the edition cited (including any corrigenda or DMTF update versions) applies.
120 For references without a date or version, the latest published edition of the referenced document
121 (including any corrigenda or DMTF update versions) applies.

122 DMTF specifications are available at http://www.dmtf.org/standards/published_documents. Unless
123 otherwise specified, values defined in this document apply to all published DMTF Standard versions of
124 the particular referenced DMTF specification.

161 **3 Terms and definitions**

162 Refer to [DSP0236](#) for terms and definitions that are used in the MCTP specifications.

163 **4 Symbols and abbreviated terms**

164 Refer to [DSP0236](#) for symbols and abbreviated terms that are used in the MCTP specifications.

165 **5 Conventions**

166 The conventions described in the following clauses apply to this specification.

167 5.1 Reserved and unassigned values

168 Unless otherwise specified, any reserved, unspecified, or unassigned values in enumerations or other
169 numeric ranges are reserved for future definition by the DMTF.

170 Unless otherwise specified, numeric or bit fields that are designated as reserved shall be written as 0
171 (zero) and ignored when read.

172 5.2 Byte ordering

173 Unless otherwise specified, byte ordering of multi-byte numeric fields or bit fields is "Big Endian" (that is,
174 the lower byte offset holds the most significant byte, and higher offsets hold lesser significant bytes).

175 **6 MCTP Message Type codes**

176 Table 1 defines the values for the Message Type field for different message types transported through
 177 MCTP.

178 NOTE A device that supports a given message type may not support that message type equally across all busses
 179 that connect to the device.

180 **Table 1 – MCTP Message Types**

Message Type	Message Type Code	Description
MCTP Control	0x00	Messages used to support initialization and configuration of MCTP communication within an MCTP network, as specified in DSP0236
Platform Level Data Model (PLDM)	0x01	Messages used to convey Platform Level Data Model (PLDM) traffic over MCTP, as specified in DSP0241 .
NC-SI over MCTP	0x02	Messages used to convey NC-SI Control traffic over MCTP, as specified in DSP0261 .
Ethernet over MCTP	0x03	Messages used to convey Ethernet traffic over MCTP. See DSP0261 . This message type can also be used separately by other specifications.
NVM Express Management Messages over MCTP	0x04	Messages used to convey NVM Express (NVMe) Management Messages over MCTP, as specified in DSP0235 .
SPDM over MCTP	0x05	Messages used to convey Security Protocol and Data Model Specification (SPDM) traffic over MCTP, as specified in DSP0275 .
Secured Messages	0x06	Messages used to convey <i>Secured Messages using SPDM over MCTP Binding Specification</i> traffic, as specified in DSP0276.
Vendor Defined – PCI	0x7E	Message type used to support VDMs where the vendor is identified using a PCI-based vendor ID. The specification of the initial Message Header bytes for this message type is provided within this specification. The specification of the format of this message is given in DSP0236 . Otherwise, the message body content is specified by the vendor, company, or organization identified by the given vendor ID.
Vendor Defined – IANA	0x7F	Message type used to support VDMs where the vendor is identified using an IANA-based vendor ID. This format uses an "Enterprise Number" that is assigned and maintained by the Internet Assigned Numbers Authority (IANA), www.iana.org , as the means of identifying a particular vendor, company, or organization. The specification of the format of this message is given in DSP0236 . Otherwise, the message body content is specified by the vendor, company, or organization identified by the given vendor ID.
Reserved	all other	Reserved

181 **7 MCTP physical medium identifiers**

182 Table 2 defines a set of numbers that correspond to different media types that can be used with MCTP.
183 The identifier is primarily used to identify which physical addressing format is used for MCTP packets on
184 the bus.

185 NOTE PCIe revision numbers are intended to indicate specification compatibility, not bit transfer rate or
186 throughput.
187

188

189

Table 2 – MCTP physical medium identifiers

Physical Media Identifier	Description
0x00	Unspecified
0x01	SMBus 2.0 100 kHz compatible
0x02	SMBus 2.0 + I ² C 100 kHz compatible
0x03	I ² C 100 kHz compatible (Standard-mode)
0x04	SMBus 3.0 or I ² C 400 kHz compatible (Fast-mode)
0x05	SMBus 3.0 or I ² C 1 MHz compatible (Fast-mode Plus)
0x06	I ² C 3.4 MHz compatible (High-speed mode)
0x07	Reserved
0x08	PCIe revision 1.1 compatible
0x09	PCIe revision 2.0 compatible
0x0A	PCIe revision 2.1 compatible
0x0B	PCIe revision 3.x compatible
0x0C	PCIe revision 4.x compatible
0x0D	PCIe revision 5.x compatible
0x0E	Reserved
0x0F	PCI compatible (PCI 1.0,2.0,2.1,2.2,2.3,3.0,PCI-X 1.0, PCI-X 2.0)
0x10	USB 1.1 compatible
0x11	USB 2.0 compatible
0x12	USB 3.0 compatible
0x13:0x17	Reserved
0x18	NC-SI over RBT (A physical interface based on RMI as defined in DSP0222)
0x19:0x1F	Reserved
0x20	KCS ¹ / Legacy (Fixed Address Decoding)
0x21	KCS ¹ / PCI (Base Class 0xC0 Subclass 0x01)
0x22	Serial Host ² / Legacy (Fixed Address Decoding)
0x23	Serial Host ² / PCI (Base Class 0x07 Subclass 0x00)
0x24	Asynchronous Serial ³ (Between MCs and IMDs)
0x30	I ³ C 12.5 MHz compatible (SDR)

Physical Media Identifier	Description
0x31	I ³ C 25 MHz compatible (HDR-DDR)
0x32:0x3F	Reserved
0x40	CXL 1.x
0x41:0xFF	Reserved
<ol style="list-style-type: none">1. Keyboard Controller Style Interface – refer to DSP0254.2. Serial Host refers to a register based UART interface.3. Asynchronous Serial refers to an 8-bit asynchronous bi-directional serial transmission media where characters are transmitted independently (i.e., each frame carries 8-bits of data).	

190

191

192 8 MCTP physical transport binding identifiers

193 Table 3 defines as set of numbers that correspond to different media types that can be used with MCTP.
 194 The identifier indicates which physical addressing format is used for MCTP packets on the bus.

195 **Table 3 – MCTP physical transport binding identifiers**

MCTP Physical Transport Binding Identifier	Description
0x00	Reserved
0x01	MCTP over SMBus (DSP0237)
0x02	MCTP over PCIe VDM (DSP0238)
0x03	Reserved for MCTP over USB
0x04	MCTP over KCS (DSP0254)
0x05	MCTP over Serial (DSP0253)
0xFF	Vendor defined NOTE A vendor-defined transport binding must meet the requirements in DSP0236 (in particular, when being bridged to or from standard MCTP transport binding and media combinations).
All other	Reserved

196

197 9 MCTP host interface type identifiers

198 The SMBIOS specification ([DSP0134](#)) reserves a range of host interface type identifiers 0x00 through
 199 0x3F for use by this specification. Table 4 defines a set of numbers that correspond to different MCTP
 200 host interface types that can be used with MCTP. The identifier indicates which physical interface to
 201 transfer MCTP packets between the host and the management controller.

202 **Table 4 – MCTP host interface type identifiers**

MCTP Host Interface Type Identifier	Description
0x00	Reserved
0x01	Reserved
0x02	KCS: Keyboard Controller Style – refer to Intelligent Platform Management Interface Specification Section 9 Keyboard Controller Style (KCS) Interface
0x03	8250 UART Register Compatible
0x04	16450 UART Register Compatible
0x05	16550/16550A UART Register Compatible
0x06	16650/16650A UART Register Compatible
0x07	16750/16750A UART Register Compatible
0x08	16850/16850A UART Register Compatible
0x09 : 0x3F	Reserved
all other	Assigned by the SMBIOS specification (DSP0134)

203 10 Host interface protocol identifiers

204 In earlier versions of this specification, this section contained a table of host interface protocol identifiers.
 205 That table has been moved to the description of the Type 42 record of the SMBIOS specification
 206 ([DSP0134](#)) with a version greater than 3.1.0.

207
208
209

ANNEX A (informative) Notation and conventions

210 Notations

211 Examples of notations used in this document are as follows:

- 212 • 2:N In field descriptions, this will typically be used to represent a range of byte offsets
213 starting from byte two and continuing to and including byte N. The lowest offset is on
214 the left, the highest is on the right.
- 215 • (6) Parentheses around a single number can be used in message field descriptions to
216 indicate a byte field that may be present or absent.
- 217 • (3:6) Parentheses around a field consisting of a range of bytes indicates the entire range
218 may be present or absent. The lowest offset is on the left, the highest is on the right.
- 219 • [PCIe](#) Underlined, blue text is typically used to indicate a reference to a document or
220 specification called out in the “Normative References” section or to items hyperlinked
221 within the document.
- 222 • rsvd Abbreviation for “reserved.” Case insensitive.
- 223 • [4] Square brackets around a number are typically used to indicate a bit offset. Bit offsets
224 are given as zero-based values (that is, the least significant bit [LSb] offset = 0).
- 225 • [7:5] A range of bit offsets. The most significant bit is on the left, the least significant bit is
226 on the right.
- 227 • 1b The lower case “b” following a number consisting of 0s and 1s is used to indicate the
228 number is being given in binary format.
- 229 • 0x12A A leading “0x” is used to indicate a number given in hexadecimal format.

230

231
232
233

ANNEX B (informative) Change log

Version	Date	Description
1.0.0	2009-07-28	
1.1.0	2009-11-03	Added Host Interface Type Identifiers. Added Host Interface Protocol Identifiers. Added reference to NC-SI and added clarification on physical medium identifiers.
1.2.0	2012-06-04	Added Ethernet over MCTP message type. Clarified the description of NC-SI over MCTP and PLDM over MCTP. Added I2C fast plus and high-speed physical medium identifiers. Clarified RMII/NC-SI physical medium identifier description. Fixed references.
1.3.0	2015-03-06	Added message type NVMe (NVM Express) Management Messages over MCTP. Updated references.
1.4.0	2017-01-11	Limited host interface type identifiers to the range 0x00:0x3F. Moved the host interface protocol identifier table to the SMBIOS specification. Updated references.
1.5.0	2017-11-16	Updated contributors and references. Added support for SMBus 3.0 and PCIe Gen 4.
1.6.0	2019-06-04	Added an MCTP Message Type for SPDM. Added an MCTP physical medium identifiers for PCIe revision 5.0, and I3C.
1.7.0	2020-05-26	Added an MCTP Message Type for MCTP Security using SPDM. Added an MCTP physical medium identifiers for CXL.
