14 management and interoperability. Members and non-members may reproduce DMTF specifications and
15 documents, provided that correct attribution is given. As DMTF specifications may be revised from time to
16 time, the particular version and release date should always be noted.

17 Implementation of certain elements of this standard or proposed standard may be subject to third party
18 patent rights, including provisional patent rights (herein "patent rights"). DMTF makes no representations
19 to users of the standard as to the existence of such rights, and is not responsible to recognize, disclose,
20 or identify any or all such third party patent right, owners or claimants, nor for any incomplete or
21 inaccurate identification or disclosure of such rights, owners or claimants. DMTF shall have no liability to
22 any party, in any manner or circumstance, under any legal theory whatsoever, for failure to recognize,
23 disclose, or identify any such third party patent rights, or for such party's reliance on the standard or
24 incorporation thereof in its product, protocols or testing procedures. DMTF shall have no liability to any
25 party implementing such standard, whether such implementation is foreseeable or not, nor to any patent
26 owner or claimant, and shall have no liability or responsibility for costs or losses incurred if a standard is
27 withdrawn or modified after publication, and shall be indemnified and held harmless by any party
28 implementing the standard from any and all claims of infringement by a patent owner for such
29 implementations.

30 For information about patents held by third-parties which have notified the DMTF that, in their opinion,
31 such patent may relate to or impact implementations of DMTF standards, visit

50

Foreword

51 The *Platform Level Data Model (PLDM) IDs and Codes Specification* (DSP0245) was prepared by the
52 Platform Management Components Intercommunications (PMCI) Working Group.

53 DMTF is a not-for-profit association of industry members dedicated to promoting enterprise and systems
54 management and interoperability.

55

Introduction

56 This document describes a collection of IDs and codes that are used across Platform Level Data Model
57 (PLDM) specifications. PLDM is designed to be an effective interface and data model that provides
58 efficient access to low-level platform inventory, monitoring, control, event, and data/parameters transfer
59 functions. For example, temperature, voltage, or fan sensors can have a PLDM representation that can
60 be used to monitor/control the platform using a set of PLDM messages. PLDM defines data
61 representations and commands that abstract the platform management hardware.

62
63

Platform Level Data Model (PLDM) IDs and Codes Specification

1 Scope

The *Platform Level Data Model (PLDM) IDs and Codes Specification* describes IDs and codes that are used across Platform Level Data Model (PLDM) specifications. Only IDs and codes that are required by a particular PLDM type-specific specification should be included in that specification. ID and code definitions that are provided in this specification should not be duplicated in other specifications.

The sets of codes and identifiers (enumeration values) that are specified in this document are as follows:

- **PLDM Type codes**
Collection of the PLDM Type codes used for PLDM messages
- **Transport Protocol Type codes**
Collection of the Transport Protocol Type codes used for PLDM messages

2 Normative References

3 Terms and Definitions

Refer to [DSP0240](#) for terms and definitions that are used across the PLDM specifications.

94 4 Symbols and Abbreviated Terms

95 Refer to [DSP0240](#) for symbols and abbreviated terms that are used across the PLDM specifications.

96 5 Conventions

97 Refer to [DSP0240](#) for conventions and data types that are used across the PLDM specifications.

98 6 PLDM Type Codes

99 Table 1 defines the values of the PLDM Type field for different PLDM types.

100

Table 1 – PLDM Types

PLDM Type	PLDM Type Code	Description
PLDM Messaging Control and Discovery	000000b	PLDM Messages used to support communication control and discovery operations for PLDM NOTE: PLDM Messaging Control and Discovery is defined in DSP0240 .
PLDM for SMBIOS	000001b	PLDM Messages used to support SMBIOS data transfer NOTE: PLDM for SMBIOS Data Transfer is defined in DSP0246 .
PLDM for Platform Monitoring and Control	000010b	PLDM Messages used to support platform monitoring and control NOTE: PLDM for Platform Monitoring and Control is defined in DSP0248 .
PLDM for BIOS Control and Configuration	000011b	PLDM Messages used to support BIOS control and configuration data transfer between the BIOS and the MC NOTE: PLDM for BIOS Control and Configuration is defined in DSP0247 .
PLDM for FRU Data	000100b	PLDM Messages used to support FRU data transfer NOTE: PLDM for FRU Data is defined in DSP0257 .
Reserved	000101b-111110b	
OEM Specific	111111b	Reserved for OEM-specific PLDM commands

101 7 Transport Protocol Type Codes

102 [DSP0247](#) uses a transport protocol type (the transportProtocolType field) in the commands for setting
103 and getting the event receiver information. Table 2 defines the values of the transport protocol type for
104 different transport bindings.

105 **Table 2 – Transport Protocol Type Values**

Transport Protocol Type (transportProtocolType)	Value	Description
MCTP	0x00	See DSP0241 for information about PLDM over MCTP binding.
Vendor Specific	0xFF	Vendor-specific transport protocol binding
