Introduction

[CXL](#) is a protocol and access technology designed to enable access to memory and other devices. It provides I/O, memory access, and caching protocol semantics via specified methodologies. It also has methods to manage these devices and a CXL fabric.

Redfish released data model additions to represent CXL components starting in the 2020.1 release of [DSP8010](#) and completing the [CXL 3.0](#) mapping in release 2022.3.

CXL provides several different methodologies for gathering this information:

- The CXL Component Command Interface (CCI) is used to retrieve information on devices as well as provide methods to configure them. This has a CXL mapping as well as an MCTP binding specification.
- The CXL Fabric Management API (FM-API) is used to configure and control the CXL fabric including routes and other necessary elements. This has a CXL mapping as well as an MCTP binding specification.
- CXL also normatively references PLDM, which can be enabled for accessing configuration information on CXL devices. Thus, PLDM for Platform Monitoring and Control (Type 2), PLDM for Redfish Device Enablement (Type 6), and PLDM for Firmware Update (Type 5) can be used to manage CXL devices.

This specification is normative for representing Redfish information about CXL devices and fabrics regardless of access method.

1 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

2 Terms, definitions, symbols, and abbreviated terms

Some terms and phrases in this document have specific meanings beyond their typical English meanings. This clause defines those terms and phrases.

The terms "shall" ("required"), "shall not", "should" ("recommended"), "should not" ("not recommended"), "may", "need not" ("not required"), "can" and "cannot" in this document are to be interpreted as described in ISO/IEC Directives, Part 2, Clause 7. The terms in parentheses are alternatives for the preceding term, for use in exceptional cases when the preceding term cannot be used for linguistic reasons. Note that ISO/IEC Directives, Part 2, Clause 7 specifies additional alternatives. Occurrences of such additional alternatives shall be interpreted in their normal English meaning.

The terms "clause", "subclause", "paragraph", and "annex" in this document are to be interpreted as described in ISO/IEC Directives, Part 2, Clause 6.

The terms "normative" and "informative" in this document are to be interpreted as described in ISO/IEC Directives, Part 2, Clause 3. In this document, clauses, subclauses, or annexes labeled "(informative)" do not contain normative content. Notes and examples are always informative elements.

The term "deprecated" in this document is to be interpreted as material that is not recommended for use in new development efforts. Existing and new implementations may use this material, but they should move to the favored approach. Deprecated material may be implemented in order to achieve backwards compatibility. Deprecated material should contain references to the last published version that included the deprecated material as normative material and to a description of the favored approach. Deprecated material may be removed from the next major version of the specification.

3 CXL CCI to Redfish mapping

Table 1 contains the mapping between CXL CCI commands and Redfish resources. Implementations shall map the CXL data from the **CXL command** and **CXL field** columns to its Redfish resource and property described in the **Redfish resource** and **Redfish property** columns and shall adhere to the numbered comments referenced in the **Comment** column. This mapping shall apply when mapping from CXL CCI commands to Redfish and mapping from Redfish back to CXL CCI commands.

Implementations shall map the following to HTTP operations:

- CXL "get" commands: HTTP `GET` .
- CXL "set" commands, but not marked as an action: HTTP `PATCH` or `PUT` .
- CXL "set" commands marked as actions: HTTP `POST` .

Table 1 — CXL CCI to Redfish mapping

CXL command	CXL field	Redfish resource	Redfish property	Comment
Get Log Capabilities	Parameter Flags[3]: Persistent across cold reset	LogService	Persistency	See Comment 1.
Get Event Records	Flags[0]: Overflow	LogService	Overflow	See Comment 1.
Get Event Records	Overflow Error Count	LogEntry	OverflowErrorCount	See Comment 1.
Get Event Records	First Overflow Event Timestamp	LogEntry	FirstOverflowTimestamp	See Comment 1.
Get Event Records	Last Overflow Event Timestamp	LogEntry	LastOverflowTimestamp	See Comment 1.
Get FW Info	FW Slot Info	PCIDevice	StagedVersion	
Get Timestamp	Timestamp	PCIDevice	CXLDevice/Timestamp	
Set Timestamp	Timestamp	PCIDevice	CXLDevice/Timestamp	
Identify Memory Device	Informational, Warning, Failure, and Fatal Event Log Size	LogService	MaxNumberOfRecords	See Comment 2.
Identify Memory Device	Poison List Maximum Media Error Records	Memory	PoisonListMaxMediaErrorRecords	
Identify Memory Device	Poison Handling Capabilities	Memory	PoisonHandlingCapabilities	

CXL command	CXL field	Redfish resource	Redfish property	Comment
Identify Memory Device	QoS Telemetry Capabilities[0]: Egress Port Congestion Supported	PCIDevice	CXLDevice/ EgressPortCongestionSupported	
Identify Memory Device	QoS Telemetry Capabilities[1]: Temporary Throughput Reduction Supported	PCIDevice	CXLDevice/ TemporaryThroughputReductionSupported	
Identify Memory Device	LSA Size	Memory	LabelStorageSizeBytes	
Get SLD QoS Control	QoS Telemetry Control[1]: Temporary Throughput Reduction Enable	PCIDevice	CXLDevice/ TemporaryThroughputReductionEnabled	
Set SLD QoS Control	QoS Telemetry Control[1]: Temporary Throughput Reduction Enable	PCIDevice	CXLDevice/ TemporaryThroughputReductionEnabled	
Get Partition Info	Active Volatile Capacity	Memory	VolatileSizeLimitMiB	
Get Partition Info	Next Volatile Capacity	Memory	StagedVolatileSizeMiB	
Get Partition Info	Next Persistent Capacity	Memory	StagedPersistentSizeMiB	
Set Partition Info	Next Volatile Capacity	Memory	StagedVolatileSizeMiB	
Set Partition Info	Next Persistent Capacity	Memory	StagedPersistentSizeMiB	
Get Health Info	Health Status	Many	Status	See Comment 3.
Get Health Info	Life Used	MemoryMetrics	CapacityUtilizationPercent	
Get Health Info	Corrected Volatile Error Count	MemoryMetrics	CorrectedVolatileErrorCount	
Get Health Info	Corrected Persistent Error Count	MemoryMetrics	CorrectedPersistentErrorCount	
Get Health Info	Additional Status[4]: Corrected Volatile Error Count	Memory	Status/Conditions	See Comment 4.
Get Health Info	Additional Status[5]: Corrected Persistent Error Count	Memory	Status/Conditions	See Comment 4.

CXL command	CXL field	Redfish resource	Redfish property	Comment
Get Health Info	Dirty Shutdown Count	MemoryMetrics	DirtyShutdownCount	
Get Alert Configuration	Valid Alerts and Programmable Alerts	MemoryMetrics	CXL/AlertCapabilities	
Scan Media	N/A	Memory	ScanMedia action	
Get Security State	Security State	Memory	SecurityStates	
Set Passphrase	All	CXLLogicalDevice	SetPassphrase action	
Disable Passphrase	All	CXLLogicalDevice	DisablePassphrase action	
Freeze Security State	N/A	CXLLogicalDevice	FreezeSecurityState action	
Passphrase Secure Erase	All	CXLLogicalDevice	PassphraseSecureErase action	
Unlock	All	CXLLogicalDevice	Unlock action	

Comment 1: A `LogEntry` resource is used to capture CXL event records. The `CXLEntryType` property shall contain the specific CXL entry type, and the `EntryType` property shall contain `CXL`. Overflow information is captured in properties of the `LogEntry` prior to the overflow condition.

Comment 2: A `Memory` resource can only contain a single `LogService`. This `LogService` resource shall contain the informational, warning, failure, and fatal event records as `LogEntry` resources. The `MaxNumberOfRecords` shall contain the sum of the informational, warning, failure, and fatal log sizes.

Comment 3: Redfish resources contain a `Status` property to show the health and state of a device. The `Conditions` property within the `Status` property is used to show why the `Health` property contains a value other than `OK`.

Comment 4: The `Conditions` property within the `Status` property of the `Memory` resource shall contain messages to indicate either the Corrected Volatile Error Count or Corrected Persistent Error Count flags are set.

4 CXL FM-API to Redfish mapping

[Table 2](#) contains the mapping between CXL FM-API commands and Redfish resources. Implementations shall map the CXL data from the **CXL command** and **CXL field** columns to its Redfish resource and property described in the **Redfish resource** and **Redfish property** columns and shall adhere to the numbered comments referenced in the **Comment** column. This mapping shall apply when mapping from CXL FM-API commands to Redfish and mapping from Redfish back to CXL FM-API commands.

Implementations shall map the following to HTTP operations:

- CXL "get" commands: HTTP `GET` .
- CXL "set" commands, but not marked as an action: HTTP `PATCH` or `PUT` .
- CXL "set" commands marked as actions: HTTP `POST` .

Table 2 — CXL FM-API to Redfish mapping

CXL command	CXL field	Redfish resource	Redfish property	Comment
Identify Switch Device	All	Switch	SwitchType	Shall contain <code>CXL</code> .
Identify Switch Device	Number of VCSs	Switch	CXL/MaxVCSSupported	
Identify Switch Device	Total Number of vPPBs	Switch	CXL/TotalNumervPPBs	
Identify Switch Device	Total Number of Bound vPPBs	Switch	CXL/NumberOfBoundvPPBs	
Identify Switch Device	Number of HDM Decoders available per USP	Switch	CXL/HDMDecoders	
Get Physical Port State	Port Information List, PBR Capable	Switch	CXL/PBRCapable	
Get Physical Port State	Port Information List, Current Port Configuration State	Port	CXL/CurrentPortConfigurationState	
Get Physical Port State	Port Information List, Connected Device Mode	Port	CXL/ConnectedDeviceMode	
Get Physical Port State	Port Information List, Connected Device Type	Port	CXL/ConnectedDeviceType	

CXL command	CXL field	Redfish resource	Redfish property	Comment
Get Physical Port State	Port Information List, Supported CXL Modes	Port	CXL/SupportedCXLModes	
Get Physical Port State	Port Information List, Supported LD Count	Port	CXL/MaxLogicalDeviceCount	
Get Physical Port State	Port Information List, Negotiated Link Width	Port	ActiveWidth	
Get Physical Port State	Port Information List, Supported Link Speeds Vector	Port	LinkConfiguration/ CapableLinkSpeedGbps	
Get Physical Port State	Port Information List, Max Link Speed	Port	MaxSpeedGbps	
Get Physical Port State	Port Information List, Current Link Speed	Port	CurrentSpeedGbps	
Physical Port Control	Port Opcode 02h: Reset PPB	Port	ResetPPB action	
Physical Port Control	Port Opcode 00h and 01h: Assert and Deassert PERST	Port	Reset action	ForceRestart shall assert then deassert PERST.
Get Virtual CXL Switch Info	Virtual CXL Switch ID	VirtualCXLSwitch	VCSId	
Get Virtual CXL Switch Info	VCS State	VirtualCXLSwitch	Status	
Get Virtual CXL Switch Info	vPPB Array Index	VirtualPCI2PCIBridge	VPPBId	
Get Virtual CXL Switch Info	vPPB[Array Index] Binding Status	VirtualPCI2PCIBridge	BindingStatus	
Get Virtual CXL Switch Info	vPPB[Array Index] Bound Port Id	VirtualPCI2PCIBridge	BoundPortId	
Get Virtual CXL Switch Info	vPPB[Array Index] Bound LD Id	VirtualPCI2PCIBridge	BoundLDId	
Get Virtual CXL Switch Info	vPPB[Array Index] Bound PID	VirtualPCI2PCIBridge	BoundPBRId	
Get Virtual CXL Switch Info	vPPB[Array Index] PCIe Device Serial Number + Bound LD Id	VirtualPCI2PCIBridge	GCXLID	

CXL command	CXL field	Redfish resource	Redfish property	Comment
Get LD Info	Memory Size	MemoryDomain	MemorySizeMiB	
Get LD Info	LD Count	PCIEDevice	CXLDevice/MaxNumberLogicalDevices	
Get LD Info	QoS Telemetry Capabilities[0]: Egress Port Congestion Supported	Port	CXL/QoS/Telemetry/Capabilities/EgressPortBackpressureSupported	See Comment 1.
Get LD Info	QoS Telemetry Capabilities[1]: Temporary Throughput Reduction Supported	PCIEDevice	CXLDevice/TemporaryThroughputReductionSupported	
Get LD Allocations	Memory Granularity	MemoryDomain	MemoryChunkIncrementMiB	
Get LD Allocations	Memory Granularity, LD Allocation List	CXLLogicalDevice	MemorySizeMiB	
Get QoS Control	QoS Telemetry Control[0]: Egress Port Congestion Enable	Port	CXL/Congestion/CongestionTelemetryEnabled	
Get QoS Control	QoS Telemetry Control[1]: Temporary Throughput Reduction Enable	PCIEDevice	CXLDevice/TemporaryThroughputReductionEnabled	
Get QoS Control	Egress Moderate Percentage	Port	CXL/Congestion/EgressModeratePercentage	
Get QoS Control	Egress Severe Percentage	Port	CXL/Congestion/EgressSeverePercentage	
Get QoS Control	Backpressure Sample Interval	Port	CXL/Congestion/BackpressureSampleInterval	
Get QoS Control	ReqCmpBasis	Port	CXL/Congestion/MaxSustainedRequestCmpBias	
Get QoS Control	Completion Collection Interval	Port	CXL/Congestion/CompletionCollectionInterval	
Get QoS Status	Backpressure Average Percentage	PortMetrics	CXL/BackpressureAveragePercentage	
Get QoS Allocated BW	QoS Allocation Fraction	CXLLogicalDevice	QoS/AllocatedBandwidth	
Get QoS BW Limit	QoS Limit Fraction	CXLLogicalDevice	QoS/LimitPercent	

CXL command	CXL field	Redfish resource	Redfish property	Comment
Set QoS Control	QoS Telemetry Control[1]: Temporary Throughput Reduction Enable	PCIeDevice	CXLDevice/ TemporaryThroughputReductionEnabled	
MLD Port Event Record	All	LogEntry		See Comment 2.

Comment 1: For an MLD, implementations shall represent Egress Port Congestion Supported in the `Port` resource. For an SLD, implementations shall represent Egress Port Congestion Supported in the `PCIeDevice` resource.

Comment 2: A `LogEntry` resource is used to capture CXL event records. The `CXLEntryType` property shall contain the specific CXL entry type, and the `EntryType` property shall contain `CXL`. Overflow information is captured in properties of the `LogEntry` prior to the overflow condition.

5 ANNEX A (informative) Change log

Version	Date	Description
1.3.0	2025-09-05	Updated the CXL FM-API to Redfish mapping section to align with DSP8010 version 2025.2.
		Updated the CXL CCI to Redfish mapping section to change the 'Set Passphrase', 'Disable Passphrase', 'Freeze Security State', and 'Passphrase Secure Erase' entries to map to the <code>PassphraseSecureErase</code> , <code>SetPassphrase</code> , <code>DisablePassphrase</code> , and <code>FreezeSecurityState</code> actions in <code>CXLLogicalDevice</code> .
		Updated the CXL CCI to Redfish mapping section to include a mapping for 'Unlock'.
1.2.0	2024-04-03	Updated the mapping of the Temporary Throughput Reduction Supported property to always use the <code>PCIeDevice</code> resource.
		Added mapping to <code>CXLDevice/TemporaryThroughputReductionEnabled</code> in the CXL CCI to Redfish mapping and CXL FM-API to Redfish mapping sections.
1.1.0	2023-11-30	Made many changes for style consistency, grammar, and general clarity. Except for the following additions, no normative changes were made. Any clarifications that inadvertently altered the normative behavior are considered errata and will be corrected in future revisions to the specification.
		Added mapping to <code>CXL/SupportedCXLModes</code> in the CXL FM-API to Redfish mapping section.
		Added mapping to the <code>Reset</code> action in the <code>Port</code> resource in the CXL FM-API to Redfish mapping section.
		Removed errant entry for 'Set Alert Configuration' in the CXL CCI to Redfish mapping section.
1.0.0	2023-09-13	Initial release.
