12 DMTF is a not-for-profit association of industry members dedicated to promoting enterprise and systems
13 management and interoperability. Members and non-members may reproduce DMTF specifications and
14 documents, provided that correct attribution is given. As DMTF specifications may be revised from time to
15 time, the particular version and release date should always be noted.

16 Implementation of certain elements of this standard or proposed standard may be subject to third party
17 patent rights, including provisional patent rights (herein "patent rights"). DMTF makes no representations
18 to users of the standard as to the existence of such rights, and is not responsible to recognize, disclose,
19 or identify any or all such third party patent right, owners or claimants, nor for any incomplete or
20 inaccurate identification or disclosure of such rights, owners or claimants. DMTF shall have no liability to
21 any party, in any manner or circumstance, under any legal theory whatsoever, for failure to recognize,
22 disclose, or identify any such third party patent rights, or for such party's reliance on the standard or
23 incorporation thereof in its product, protocols or testing procedures. DMTF shall have no liability to any
24 party implementing such standard, whether such implementation is foreseeable or not, nor to any patent
25 owner or claimant, and shall have no liability or responsibility for costs or losses incurred if a standard is
26 withdrawn or modified after publication, and shall be indemnified and held harmless by any party
27 implementing the standard from any and all claims of infringement by a patent owner for such
28 implementations.

29 For information about patents held by third-parties which have notified the DMTF that, in their opinion,
30 such patent may relate to or impact implementations of DMTF standards, visit
31 <http://www.dmtf.org/about/policies/disclosures.php>.

168

Foreword

169 The *BIOS Management Profile* (DSP1061) was prepared by the Desktop Mobile Working Group and the
170 Physical Platform Profiles Working Group of the DMTF.

171 DMTF is a not-for-profit association of industry members dedicated to promoting enterprise and systems
172 management and interoperability.

173 Acknowledgments

174 The authors wish to acknowledge the following people.

175 Editors:

200

Introduction

201 This document defines the classes used to describe and manipulate the BIOS configuration in a managed
202 system. The information in this specification is intended to be sufficient for a provider or consumer of this
203 data to identify unambiguously the classes, properties, methods, and values that shall be instantiated and
204 manipulated to represent and manage BIOS attributes of managed systems and subsystems that are
205 modeled using the DMTF Common Information Model (CIM) core and extended model definitions.

206 The target audience for this specification is implementers who are writing CIM-based providers or
207 consumers of management interfaces that represent the component described in this document.

208

BIOS Management Profile

209 1 Scope

210 The *BIOS Management Profile* extends the management capabilities of referencing profiles by adding the
211 capability to represent and configure BIOS attributes, such as a Network Controller or IDE Controller. The
212 individual BIOS attribute's relationship with a respective device is also described. Additionally, the
213 profile's registration for the schema implementation version information is described.

214 2 Normative References

215 The following referenced documents are indispensable for the application of this document. For dated
216 references, only the edition cited applies. For undated references, the latest edition of the referenced
217 document (including any amendments) applies.

236 3 Terms and Definitions

237 For the purposes of this document, the following terms and definitions apply.

238 3.1

239 can

240 used for statements of possibility and capability, whether material, physical, or causal

- 241 **3.2**
242 **cannot**
243 used for statements of possibility and capability, whether material, physical, or causal
- 244 **3.3**
245 **conditional**
246 indicates requirements to be followed strictly to conform to the document when the specified conditions
247 are met
- 248 **3.4**
249 **mandatory**
250 indicates requirements to be followed strictly to conform to the document and from which no deviation is
251 permitted
- 252 **3.5**
253 **may**
254 indicates a course of action permissible within the limits of the document
- 255 **3.6**
256 **need not**
257 indicates a course of action permissible within the limits of the document
- 258 **3.7**
259 **optional**
260 indicates a course of action permissible within the limits of the document
- 261 **3.8**
262 **referencing profile**
263 indicates a profile that owns the definition of this class and can include a reference to this profile in its
264 "Referenced Profiles" table
- 265 **3.9**
266 **shall**
267 indicates requirements to be followed strictly to conform to the document and from which no deviation is
268 permitted
- 269 **3.10**
270 **shall not**
271 indicates requirements to be followed strictly to conform to the document and from which no deviation is
272 permitted
- 273 **3.11**
274 **should**
275 indicates that among several possibilities, one is recommended as particularly suitable, without
276 mentioning or excluding others, or that a certain course of action is preferred but not necessarily required
- 277 **3.12**
278 **should not**
279 indicates that a certain possibility or course of action is deprecated but not prohibited

280 **3.13**
 281 **unspecified**
 282 keyword that indicates that this profile does not define any constraints for the referenced CIM element or
 283 operation

284 **3.14**
 285 **BIOS attribute**
 286 a BIOS element that provides information, a control surface, or both for basic hardware setup and
 287 configuration in a computer system
 288 BIOS attributes are typically accessible in the computer’s system and option ROM setup screens.

289 **4 Symbols and Abbreviated Terms**

290 **4.1**
 291 **BIOS**
 292 Basic Input Output System

293 **5 Synopsis**

294 **Profile Name:** BIOS Management

295 **Version:** 1.0.0

296 **Organization:** DMTF

297 **CIM Schema Version:** 2.22

298 **Central Class:** CIM_BIOSElement

299 **Scoping Class:** CIM_ComputerSystem

300 The *BIOS Management Profile* extends the management capability of the referencing profiles by adding
 301 the capability to represent and configure BIOS attributes in a managed system.

302 Table 1 lists specifications on which this profile has dependency.

303 **Table 1 – Related Specifications**

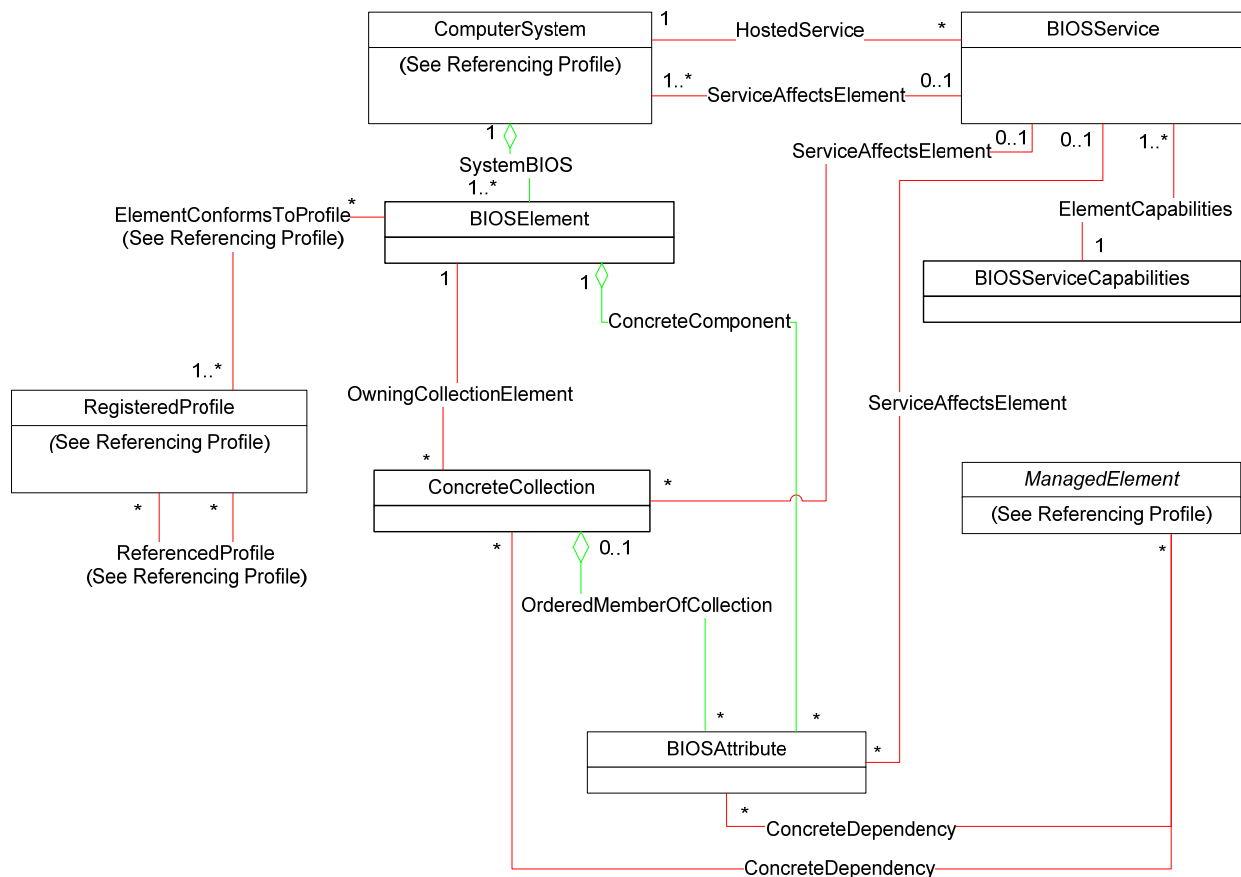

Specification Name	Organization	Version	Relationship	Behavior
Profile Registration	DMTF	1.0	Mandatory	None
BIOS Attribute Registry	DMTF	Any	Optional	Recommended to give a client a standardized naming and behavior definition of the BIOS attribute being managed

304 **6 Description (Informative)**

305 The *BIOS Management Profile* describes the elements needed to provide the capability to manage the
 306 BIOS attributes of a computer system.

307 Figure 1 represents the class schema for the *BIOS Management Profile*. For simplicity, the *CIM_* prefix
 308 has been removed from the names of the classes. The CIM_BIOSElement class represents a BIOS of a
 309 computer system. An implementation may have more than one BIOS in the computer system. The
 310 CIM_BIOSAttribute class represents the BIOS attributes of a BIOS element in a computer system. Each

311 BIOS attribute is represented by an instance of the CIM_BIOSAttribute class. The properties of the
 312 CIM_BIOSAttribute class and its subclasses give a client descriptive information about the BIOS attribute
 313 and the current value of the attribute. The descriptive properties provide information to the client about the
 314 ability to change the value and the legal possibilities for a new value. The CIM_BIOSService class is
 315 implemented to provide methods to change the values of BIOS attributes. This is necessary because the
 316 ModifyInstance operation is not supported on the CIM_BIOSAttribute class. The
 317 CIM_BIOSServiceCapabilities class is used to advertise to a client the methods that can be used to
 318 change the value of BIOS attributes and is implemented anytime the CIM_BIOSService class is
 319 implemented. The CIM_BIOSService and CIM_BIOSServiceCapabilities classes are not required for
 320 implementations that have exclusively read-only BIOS attributes. As a way of organizing or grouping the
 321 CIM_BIOSAttribute instances, an implementation may implement collections. An instance of the
 322 CIM_ConcreteCollection class shall be static to the implementation and used as a logical grouping by
 323 associating CIM_BIOSAttribute instances with the CIM_ConcreteCollection instance through the
 324 CIM_OrderedMemberOfCollection association.

325

326

Figure 1 – BIOS Management Profile: Class Diagram

327 7 Implementation

328 This section details the requirements related to the instantiation of instances and their properties for
 329 implementations of this profile. Methods are specified in section 8, and properties are specified in
 330 section 10.

331 **7.1 CIM_BIOSAttribute**

332 Each BIOS attribute shall be represented by an instance of the CIM_BIOSAttribute class.

333 **7.1.1 CIM_BIOSAttribute.AttributeName**

334 For each CIM_BIOSAttribute instance, the AttributeName property shall contain a unique, non-modifiable
335 value for the implementation namespace. The AttributeName property shall have a string value that
336 corresponds to the BIOS attribute that the CIM_BIOSAttribute instance represents. When the
337 CIM_BIOSElement.RegistryURIs property is not Null (BIOS Attribute Registry is implemented), the
338 AttributeName property shall contain a value previously defined in a BIOS attribute registry published by
339 the entity creating or defining the BIOS attribute and shall use the following format: "<OrgID>:<identifier>".

340 The value of <OrgID> shall include a copyrighted, trademarked, or otherwise unique name that is owned
341 by the entity creating or defining the BIOS attribute, or is a registered ID that is assigned to the entity by a
342 recognized global authority. In addition, <OrgID> shall not contain a colon (:). For DMTF-defined
343 instances, the algorithm shall be used with the <OrgID> set to "DMTF".

344 **7.1.2 CIM_BIOSAttribute.CurrentValue**

345 The CIM_BIOSAttribute.CurrentValue[] property shall be an array of character strings of variable length
346 (pattern .*) that represent the current value of the BIOS attribute that is represented by the
347 CIM_BIOSAttribute instance. An implementation may have BIOS attributes capable of multiple current
348 values. When a CIM_BIOSAttribute instance has more than one current value, each value shall be
349 represented in an individual element of the CurrentValue[] array. The number of current values
350 represented by this property is dynamic and can be based on the implementation.

351 **7.1.3 CIM_BIOSAttribute.DefaultValue**

352 The CIM_BIOSAttribute.DefaultValue[] property shall be an array of strings that represents the default
353 value of the BIOS attribute that is represented by the CIM_BIOSAttribute instance. The default value is
354 based on the implementation.

355 When a CIM_BIOSAttribute instance represents a multi-valued BIOS attribute, each component value of
356 the default value shall be represented in an individual element of the DefaultValue[] array.

357 Support for the DefaultValue[] property is optional.

358 **7.1.4 CIM_BIOSAttribute.PendingValue**

359 The CIM_BIOSAttribute.PendingValue[] property shall be an array of strings that represent the pending
360 value of the BIOS attribute that is represented by the CIM_BIOSAttribute instance as result of invoking
361 the CIM_BIOSService.SetBIOSAttribute(), CIM_BIOSService.SetBIOSAttributes(),
362 CIM_BIOSService.SetBIOSAttributeEmbeddedInstance(), or CIM_BIOSService.RestoreBIOSDefaults()
363 method.

364 Support for the PendingValue[] property is conditional. If an implementation queues or caches BIOS
365 attribute set operations for an application at a later time, the PendingValue[] property shall be supported.

366 When a CIM_BIOSAttribute instance represents a multi-valued BIOS attribute that has a new value
367 pending, each component value of the pending value shall be represented in an individual element of the
368 PendingValue[] array.

369 **7.2 CIM_BIOSEnumeration**

370 The CIM_BIOSEnumeration class extends the CIM_BIOSAttribute class to provide informational detail of
371 enumeration data types and advertises the possible values to a client. Support for the
372 CIM_BIOSEnumeration class is optional.

373 **7.2.1 CIM_BIOSEnumeration.PossibleValues**

374 The PossibleValues property shall be an array of character strings of variable length (pattern .*) to
375 indicate the possible values of the BIOS attribute that is represented by the instance when the instance
376 represents an enumeration data type.

377 **7.3 CIM_BIOSInteger**

378 The CIM_BIOSInteger class extends the CIM_BIOSAttribute class to provide informational detail of
379 integer data types. Support for the CIM_BIOSInteger class is optional.

380 **7.3.1 CIM_BIOSInteger.UpperBound and CIM_BIOSInteger.LowerBound**

381 The CIM_BIOSInteger.UpperBound and CIM_BIOSInteger.LowerBound properties shall be integer
382 values.

383 When not Null, the CIM_BIOSAttribute.UpperBound and CIM_BIOSAttribute.LowerBound properties shall
384 contain integers that define the potential lower limit and upper limit of the BIOSAttribute.CurrentValue
385 value.

386 **7.3.2 CIM_BIOSInteger.ProgrammaticUnit**

387 When not Null, the CIM_BIOSInteger.ProgrammaticUnit property shall contain a value that defines the
388 programmatic unit of the CIM_BIOSAttribute.CurrentValue[], CIM_BIOSAttribute.DefaultValue[], and
389 CIM_BIOSAttribute.PendingValue[] properties that are represented by the CIM_BIOSInteger instance
390 and shall comply with the ISPUnt definition in [DSP0004](#).

391 **7.3.3 CIM_BIOSInteger.ScalarIncrement**

392 When not Null, the CIM_BIOSInteger.ScalarIncrement property shall contain an integer that defines the
393 quantity of units separating each potential value of the CIM_BIOSAttribute.CurrentValue property of the
394 attribute represented in the instance.

395 **7.4 CIM_BIOSString**

396 The CIM_BIOSString class extends the CIM_BIOSAttribute class to provide informational detail of String
397 data types. Support for the CIM_BIOSString class is optional.

398 **7.4.1 CIM_BIOSString.ValueExpression**

399 The CIM_BIOSString.ValueExpression property denotes a Perl-compatible regular expression (PCRE)
400 syntax to use in validating attribute values. For a string attribute where CIM_BIOSString.StringType=7
401 (regex) this property shall have a value.

402 **7.4.2 CIM_BIOSString.MinLength and CIM_BIOSString.MaxLength**

403 When not Null, the CIM_BIOSString.MinLength and CIM_BIOSString.MaxLength properties shall contain
404 integers that define the potential minimum and maximum character length of the
405 BIOSAttribute.CurrentValue value.

406 **7.5 CIM_BIOSPassword**

407 The CIM_BIOSPassword class extends the CIM_BIOSAttribute class to provide information detail about
408 manageable BIOS-based passwords.

409 **7.5.1 CIM_BIOSPassword.MinLength**

410 The MinLength property specifies the minimum string length allowed when modifying this BIOS attribute.
411 A value of Null means zero length.

412 **7.5.2 CIM_BIOSPassword.MaxLength**

413 The MaxLength property specifies the maximum string length allowed when modifying this BIOS attribute.
414 A value of Null means that the maximum length is unknown. A value of 0 defines the maximum length as
415 the largest length that can be represented by this data type.

416 **7.5.3 CIM_BIOSPassword.CurrentValue[]**

417 The CurrentValue[] property shall always return an empty array when read.

418 **7.5.4 CIM_BIOSPassword.PendingValue[]**

419 The PendingValue[] property shall always return an empty array when read.

420 **7.5.5 CIM_BIOSPassword.PasswordEncoding (Optional)**

421 The value of the PasswordEncoding property specifies that the encoding tag used to denote the format of
422 the password string was created or set using one of the following methods:

- 423 • Keyboard in hexadecimal format containing keyboard scan code input. An example of a
424 password structured in this format is "321539191E1F1F11181320", which is the representation
425 of "my password" in U.S. English keyboard scan codes.
- 426 • ASCII denotes clear text that shall comply with the ASCII character set. Character encodings
427 from decimal 32 to decimal 126 are supported. An example is "my password".
- 428 • Pin denotes that only numeric input in ASCII text is allowed for the password instance. An
429 example is "1234".
- 430 • Unicode denotes Unicode text that shall comply with supported Unicode character encoding.
431 An example is "00780323".

432 **7.5.6 CIM_BIOSPassword.IsSet**

433 This property is provided because the CurrentValue property and PendingValue property always return
434 an empty array for all password instances that contain a valid or invalid password entry.

435 This property returns TRUE if the current password instance is valid and returns FALSE otherwise.

436 Valid password entry encoding formats are optionally defined in the PasswordEncoding property.

437 **7.6 Relationship between the BIOS and Managed System**

438 For each CIM_BIOSElement instance that represents a BIOS of a managed system, one
439 CIM_SystemBIOS instance shall associate the CIM_BIOSElement instance with the
440 CIM_ComputerSystem instance that represents the managed system.

441 When the association is used in this way, its GroupComponent property shall reference the
442 CIM_ComputerSystem instance and its PartComponent property shall reference the CIM_BIOSElement
443 instance.

444 **7.7 CIM_ConcreteComponent**

445 The CIM_ConcreteComponent class is used to associate CIM_BIOSAttribute instances with a
446 CIM_BIOSElement instance. When the association is used in this way, its GroupComponent property

447 shall reference the CIM_BIOSElement instance and its PartComponent property shall reference the
448 CIM_BIOSAttribute instance.

449 **7.7.1 CIM_ConcreteComponent with CIM_ConcreteCollection Implementation**

450 For each CIM_BIOSAttribute instance that is associated with a CIM_ConcreteCollection instance through
451 a CIM_OrderedMemberOfCollection instance, one CIM_ConcreteComponent instance may associate the
452 CIM_BIOSAttribute instance with the CIM_BIOSElement instance.

453 **7.7.2 CIM_ConcreteComponent without CIM_ConcreteCollection Implementation**

454 For each CIM_BIOSAttribute instance that is not associated with a CIM_ConcreteCollection instance
455 through a CIM_OrderedMemberOfCollection instance, one CIM_ConcreteComponent instance shall
456 associate the CIM_BIOSAttribute instance with the CIM_BIOSElement instance.

457 **7.8 CIM_BIOSElement**

458 The BIOS Image and Option ROM shall be represented by an instance of the CIM_BIOSElement class.
459 One instance of CIM_BIOSElement shall exist for the implementation.

460 **7.9 CIM_BIOSService**

461 Support for the CIM_BIOSService class is conditional. When a CIM_BIOSAttribute instance has an
462 IsReadOnly property with a value of FALSE, the CIM_BIOSService class shall be supported.

463 When implemented, one CIM_HostedService instance shall associate a CIM_BIOSService instance with
464 the Scoping Instance of CIM_ComputerSystem that represents the computer system on which it is
465 hosted, and one CIM_ServiceAffectsElement instance shall associate the CIM_BIOSService instance
466 with the CIM_ComputerSystem instance that represents the managed system.

467 All instances of CIM_BIOSAttribute associated with the instance of CIM_BIOSService using
468 CIM_ServiceAffectsElement shall be within the scope of the CIM_ComputerSystem instance that is
469 associated with the instance of CIM_BIOSService using CIM_ServiceAffectsElement.

470 An implementation may support a single CIM_BIOSService instance used to manage multiple computer
471 systems.

472 An implementation may support a single computer system with multiple CIM_BIOSService instances.

473 An implementation shall not support a single BIOS attribute managed by multiple CIM_BIOSService
474 instances.

475 **7.10 CIM_ConcreteDependency**

476 A CIM_ConcreteDependency instance may be used to associate an instance of a concrete subclass of
477 the CIM_ManagedElement class with either a CIM_BIOSAttribute instance that directly affects the
478 managed element or a CIM_ConcreteCollection instance that contains CIM_BIOSAttribute instances that
479 collectively affect the managed element.

480 The Dependent property shall reference the CIM_ManagedElement instance. If a
481 CIM_ConcreteDependency instance is used to associate with a CIM_BIOSAttribute instance, the
482 Antecedent property shall reference the CIM_BIOSAttribute instance. If CIM_ConcreteDependency is
483 used to associate with a CIM_ConcreteCollection instance, the Antecedent property shall reference the
484 CIM_ConcreteCollection instance.

485 A CIM_ConcreteDependency instance may be used to associate a CIM_ManagedElement instance with
486 both a CIM_BIOSAttribute instance and a CIM_ConcreteCollection instance that contains
487 CIM_BIOSAttribute instances that are already associated with the CIM_ManagedElement instance.

488 7.11 CIM_ElementCapabilities and CIM_BIOSServiceCapabilities (Optional)

489 Support for the CIM_BIOSServiceCapabilities class and the CIM_ElementCapabilities class is optional. If
 490 CIM_BIOSService is instantiated, a CIM_BIOSServiceCapabilities instance shall be associated with the
 491 CIM_BIOSService instance through a CIM_ElementCapabilities instance.

492 7.12 CIM_ConcreteCollection (Optional)

493 The CIM_ConcreteCollection class is used to define a collection of BIOS attributes supported in the
 494 context of a particular profile or implementation. An implementation may define a collection by type or
 495 support user-definable collections.

496 7.12.1 Relationship with CIM_BIOSElement

497 Every CIM_ConcreteCollection instance that represents a collection of BIOS attributes shall be
 498 associated with exactly one CIM_BIOSElement instance through a CIM_OwningCollectionElement
 499 instance.

500 7.12.2 Relationship with CIM_BIOSAttribute

501 A CIM_BIOSAttribute instance may be associated with one or more CIM_ConcreteCollection instances
 502 through a CIM_OrderedMemberOfCollection instance.

503 7.12.2.1 CIM_OrderedMemberOfCollection.AssignedSequence

504 The CIM_OrderedMemberOfCollection.AssignedSequence property is optionally used when a collection
 505 also represents the ordering of BIOS attributes. When the AssignedSequence property is used, all
 506 CIM_OrderedMemberOfCollection instances that associate CIM_BIOSAttribute instances with the same
 507 CIM_ConcreteCollection instance shall have a value for the AssignedSequence property.

508 7.12.3 Static BIOS Attribute Collections

509 The implementation may instantiate CIM_ConcreteCollection instances to form logical groupings of
 510 attributes by functionality (for examples, see Table 2).

511 7.12.4 CIM_ConcreteCollection.ElementName

512 For each CIM_ConcreteCollection instance, the ElementName property shall contain a unique, non-
 513 modifiable value for the implementation namespace. The ElementName property may contain a value
 514 that is user-friendly. When the CIM_ConcreteCollection instance represents a static DMTF or vendor
 515 collection, the ElementName property shall be generated as a structured value property of the form
 516 <OrgID> : <unique identifier>. <OrgID> shall include a copyrighted, trademarked, or
 517 otherwise unique name that is owned by the business entity creating or defining the ElementName, or is a
 518 registered unique identifier that is assigned to the business entity by a recognized global authority. In
 519 addition, to ensure uniqueness, <OrgID> shall not contain a colon. When using this algorithm, the first
 520 colon to appear in ElementName shall appear between <OrgID> and <unique identifier>.

521 For CIM_ConcreteCollection instances defined by the *BIOS Management Profile*, the value for
 522 ElementName shall be formatted as follows:

523 "DMTF:" <unique identifier>

524 <unique identifier> shall be a string value defined in Table 2.

525

Table 2 – CIM_ConcreteCollection Unique Identifiers

Unique Identifiers	Examples
Integrated Devices	Fast IR, Internal Modem, Integrated NIC, External USB Ports, Parallel Ports, Serial Ports, PC Card 1394
Video Attributes	Ambient Light Sensor, Brightness, Brightness (AC), LCD Panel Expansion, Primary Video
Performance Attributes	Multi-Core Support, HDD Acoustic Mode
Power Management	Auto On Mode, Auto On Time and day of the week, Wake on LAN/WAN
Maintenance Attributes	Serial Number, Asset Tag
Post Behavior Attributes	Adapter Warnings, Fn key Emulation, Fast Boot, Virtualization, Keypad (Embedded), Mouse/Touchpad, NumLock LED, USB Emulation
Wireless Attributes	Internal Bluetooth, Internal Wi-Fi, Internal Cellular, Wireless Switch, Wi-Fi Catcher
Docking Attributes	Dock Device, Undocking Method, PCI Slot monitoring, Universal connect
Security Attribute	Passwords, Passwords changeable, Password Bypass, Wireless AP change, TPM Enable
System Attributes	System Info, Processor Info, Memory Info, Date/Time, Device Info, Battery Info, Boot Sequence

526 7.13 CIM_ServiceAffectsElement (Optional)

527 A CIM_ServiceAffectsElement instance is used to associate CIM_BIOSAttribute instances or
 528 CIM_ConcreteCollection instances that contain the CIM_BIOSAttribute instances with a
 529 CIM_BIOSService instance. A CIM_ServiceAffectsElement instance is also used to associate
 530 CIM_ComputerSystem instances with a CIM_BIOSService instance (see 10.18).

531 7.13.1 CIM_ServiceAffectsElement Association with CIM_BIOSAttribute

532 For each CIM_BIOSAttribute instance that is not associated with a CIM_ConcreteCollection instance
 533 through a CIM_OrderedMemberOfCollection instance, one CIM_ServiceAffectsElement instance shall
 534 associate the CIM_BIOSAttribute instance with the CIM_BIOSService instance.

535 For each CIM_BIOSAttribute instance that is associated with a CIM_ConcreteCollection instance through
 536 a CIM_OrderedMemberOfCollection instance, one CIM_ServiceAffectsElement instance may optionally
 537 associate the CIM_BIOSAttribute instance with the CIM_BIOSService instance.

538 When the association is used as described in this section, its AffectingElement property shall reference
 539 the CIM_BIOSService instance and its AffectedElement property shall reference the CIM_BIOSAttribute
 540 instance.

541 7.13.2 CIM_ServiceAffectsElement Association with CIM_ConcreteCollection

542 For each CIM_BIOSAttribute instance that is associated with a CIM_ConcreteCollection instance through
 543 a CIM_OrderedMemberOfCollection instance, one CIM_ServiceAffectsElement instance shall associate
 544 the CIM_BIOSService instance with this CIM_ConcreteCollection instance.

545 When the association is used in this way, its AffectingElement property shall reference the
 546 CIM_BIOSService instance and its AffectedElement property shall reference the CIM_ConcreteCollection
 547 instance.

548 7.13.3 CIM_ServiceAffectsElement Association with CIM_ComputerSystem

549 The AffectingElement property shall reference the CIM_BIOSService instance. The AffectedElement
550 property shall reference the CIM_ComputerSystem instance.

551 8 Methods

552 This section details the requirements for supporting intrinsic operations and extrinsic methods for the CIM
553 elements defined by this profile.

554 8.1 CIM_BIOSService.SetBIOSAttribute()

555 The SetBIOSAttribute() method is used to set or change the value of a BIOS attribute. This method may
556 optionally be implemented; however, at least one extrinsic method must be implemented for the
557 CIM_BIOSService instance.

558 Invocation of the SetBIOSAttribute() method shall change the value of the
559 CIM_BIOSAttribute.CurrentValue or CIM_BIOSAttribute.PendingValue property to the value specified by
560 the AttributeValue parameter if the CIM_BIOSAttributeValue.IsReadOnly property is FALSE. Invocation of
561 this method when the CIM_BIOSAttributeValue.IsReadOnly property is TRUE shall result in no change to
562 the value of the CIM_BIOSAttributeValue.CurrentValue property. The results of changing this value are
563 described with the SetResult parameter.

564 Return code values for the SetBIOSAttribute() method are specified in Table 3. Standard messages are
565 specified in Table 4, and parameters are specified in Table 5. Invoking the SetBIOSAttribute() method
566 multiple times can result in the earlier requests being overwritten or lost.

567 **Table 3 – SetBIOSAttribute() Method: Return Code Values**

Value	Description
0	Completed with no error
1	Not supported
2	Error occurred
3..32767	DMTF reserved
32768..65535	Vendor specific

568 Implementation of standard messages is optional. Standard messages defined for this method are
569 described in Table 4.

570 **Table 4 – SetBIOSAttribute() Method: Standard Messages**

(return) Message ID	Message
WIP.201	Authentication failed
WIP.203	Operation not supported by CIM service
WIP.209	Missing CIM method parameter
WIP.212	Invalid CIM method parameter value
WIP.228	Operation timeout

571

Table 5 – SetBIOSAttribute() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN, Optional	TargetBIOS	REF	Shall reference the CIM_BIOSElement instance in which the operation is targeted
IN, REQ	AttributeName	String	Shall contain the BIOS attribute name representing the BIOS attribute to be modified, as specified by BIOSAttribute.AttributeName property. The specified BIOS attribute shall be unique and already exist.
OUT	SetResult	Uint32	Shall specify the result of invoking SetBIOSAttribute for the targeted BIOS attribute specified in the AttributeName parameter. See Table 6 for possible return values.
IN, REQ	AttributeValue[]	array of strings	Shall contain a new value to assign to the specified BIOSAttribute. A value of NULL indicates the factory default value for the BIOSAttribute is requested. If this value is valid, it will be applied to the CurrentValue or PendingValue property of the specified BIOSAttribute depending on the system BIOS implementation.
IN, Optional	AuthorizationToken	String	Shall contain a token to modify BIOSAttribute values for this computer system. This is usually the BIOS administrator password. If this is a password, the PasswordEncoding parameter shall be used to denote the format of the password string. This is an embedded instance of CIM_Credential.
IN, Optional	PasswordEncoding	Uint32	Shall contain an encoding tag that specifies the format the password string is being passed to the BIOS. See section 7.5.5 for examples of encoding tags.

572

Table 6 – SetBIOSAttribute() Method: SetResult Parameter Values

Result Value	Condition
2 (Set CurrentValue Property)	CIM_BIOSAttribute.CurrentValue property is set to the new value.
3 (Set PendingValue Property)	BIOSAttribute.PendingValue property is set to the new value.

573 8.2 CIM_BIOSService.SetBIOSAttributeEmbeddedInstance()

574 The SetBIOSAttributeEmbeddedInstance() method is used to set or change the value of a BIOS attribute.
 575 The EmbeddedInstance is a string representation of a CIM_BIOSAttribute instance. It may be
 576 implemented for an implementation that supports the changing of one element in the
 577 CIM_BIOSAttribute.CurrentValue array when the array has multiple elements. This method may optionally
 578 be implemented; however, at least one extrinsic method must be implemented for the CIM_BIOSService
 579 instance.

580 Invocation of the SetBIOSAttributeEmbeddedInstance() method shall change the value of the
 581 CIM_BIOSAttribute.CurrentValue or CIM_BIOSAttribute.PendingValue property to the CurrentValue
 582 specified in the AttributeConfig parameter embedded instance of CIM_BIOSAttribute. The results of
 583 changing this value are described with the SetResult parameter.

584 Return code values for the SetBIOSAttributeEmbeddedInstance() method are specified in Table 7.
 585 Standard messages are specified in Table 8, and parameters are specified in Table 9.

586 Invoking the SetBIOSAttributeEmbeddedInstance() method multiple times can result in the earlier
 587 requests being overwritten or lost.

588 **Table 7 – SetBIOSAttributeEmbeddedInstance() Method: Return Code Values**

Value	Description
0	Completed with no error
1	Not supported
2	Error occurred
3..32767	DMTF reserved
32768..65535	Vendor specific

589 Implementation of standard messages is optional. Standard messages defined for this method are
 590 described in Table 8.

591 **Table 8 – SetBIOSAttributeEmbeddedInstance() Method: Standard Messages**

(return) Message ID	Message
WIP.201	Authentication failed
WIP.203	Operation not supported by CIM service
WIP.209	Missing CIM method parameter
WIP.212	Invalid CIM method parameter value
WIP.228	Operation timeout

592 **Table 9 – SetBIOSAttributeEmbeddedInstance() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, Optional	TargetBIOS	REF	Shall reference the CIM_BIOSElement instance in which the operation is targeted
IN, REQ	AttributeConfig	String	Shall contain an embedded instance of CIM_BIOSAttribute representing the targeted BIOS attribute and the desired value. The specified BIOS attribute shall be unique and already exist.
OUT	SetResult	uint32	Specifies the result of invoking SetBIOSAttributeEmbeddedInstance for the targeted BIOS attribute specified in the AttributeConfig parameter. See Table 10 for possible return values.
IN, Optional	AuthorizationToken	String	Shall contain a token to modify BIOSAttribute values for this computer system. This is usually the BIOS administrator password. If this is a password, the PasswordEncoding parameter shall be used to denote the format of the password string. This is an embedded instance of CIM_Credential.
IN, Optional	PasswordEncoding	uint32	Shall contain an encoding tag that specifies the format the password string is being passed to the BIOS. See section 7.5.5 for examples of encoding tags.

593 **Table 10 – SetBIOSAttributeEmbeddedInstance () Method: SetResult Parameter Values**

Result Value	Condition
2 (Set CurrentValue Property)	CIM_BIOSAttribute.CurrentValue property is set to the new value.
3 (Set PendingValue Property)	BIOSAttribute.PendingValue property is set to the new value.

594 **8.3 CIM_BIOSService.RestoreBIOSDefaults()**

595 Invocation of the CIM_BIOSService.RestoreBIOSDefaults() method shall set all BIOS attributes to their
 596 respective default values. This method may optionally be implemented; however, at least one extrinsic
 597 method must be implemented for the CIM_BIOSService instance.

598 If no default values are specified for the BIOS attributes, the existing values shall remain unchanged.

599 The return code values of the CIM_BIOSService.RestoreBIOSDefaults() method are specified in
 600 Table 11. Standard messages are specified in Table 12, and parameters are specified in Table 13.

601 **Table 11 – RestoreBIOSDefaults() Method: Return Code Values**

Value	Description
0	Completed with no error
1	Not supported
2	Error occurred
3..32767	DMTF reserved
32768..65535	Vendor specific

602 Implementation of standard messages is optional. Standard messages defined for this method are
 603 described in Table 12.

604 **Table 12 – RestoreBIOSDefaults() Method: Standard Messages**

(return) Message ID	Message
WIP.201	Authentication failed
WIP.203	Operation not supported by CIM service
WIP.209	Missing CIM method parameter
WIP.212	Invalid CIM method parameter value
WIP.228	Operation timeout

605 **Table 13 – RestoreBIOSDefaults() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN, REQ	TargetBIOS	REF	Shall reference the CIM_BIOSElement instance in which the operation is targeted
IN, Optional	AuthorizationToken	String	Shall contain a token to modify BIOSAttribute values for this computer system. This is usually the BIOS administrator password. If this is a password, the PasswordEncoding parameter shall be used to denote the format of the password string. This is an embedded instance of CIM_Credential.
IN, Optional	PasswordEncoding	uint32	Shall contain an encoding tag that specifies the format the password string is being passed to the BIOS. See section 7.5.5 for examples of encoding tags.

606 **8.4 CIM_BIOSService.SetBIOSAttributes()**

607 The SetBIOSAttributes() method is used to set or change the values of a group of BIOS attributes. This
 608 method may optionally be implemented; however, at least one extrinsic method must be implemented for
 609 the CIM_BIOSService instance.

610 Invocation of the SetBIOSAttributes() method shall change the values of the
 611 CIM_BIOSAttribute.CurrentValue or PendingValue properties that correspond to the names specified by
 612 the AttributeName parameter and the values specified by the AttributeValue parameter if the respective
 613 CIM_BIOSAttribute.IsReadOnly property is FALSE. Invocation of this method when the respective
 614 CIM_BIOSAttribute.IsReadOnly property is TRUE shall result in no change to the corresponding value of
 615 the CIM_BIOSAttribute.CurrentValue property.

616 If more than one value is specified for a particular BIOS attribute, the AttributeName parameter shall
 617 contain multiple identical array entries that represent the BIOS attribute name that corresponds to each
 618 respective BIOS attribute value described by the AttributeValue parameter. If the CollectionElementName
 619 parameter is specified, this operation targets BIOS attributes that are members of this specified collection
 620 only. If BIOS attributes represented by the AttributeName parameter are not members of this collection,
 621 the SetResult parameter that corresponds to these BIOS attributes shall return a value of 5 (No Attempt
 622 to Set Value due to Error). If the CollectionElementName parameter is not specified, the BIOS attributes
 623 represented by the AttributeName parameter can be members of any collection or associated with no
 624 collection at all. The value of ConcreteCollection.ElementName supplied for this parameter can be user
 625 friendly and shall be unique within the scope of the instantiating Namespace; if the value is not unique,
 626 this parameter shall not be supplied.

627 Return code values for the SetBIOSAttributes() method are specified in Table 14. Standard messages
 628 are specified in Table 15, and parameters are specified in Table 16.

629 Invoking the SetBIOSAttributes() method multiple times can result in the earlier requests being
 630 overwritten or lost.

631 **Table 14 – SetBIOSAttributes() Method: Return Code Values**

Value	Description
0	Completed with no error
1	Not supported
2	Error occurred
3..32767	DMTF reserved
32768..65535	Vendor specific

632 Implementation of standard messages is optional. Standard messages defined for this method are
 633 described in Table 15.

634 **Table 15 – SetBIOSAttributes() Method: Standard Messages**

(return) Message ID	Message
WIP.201	Authentication failed
WIP.203	Operation not supported by CIM service
WIP.209	Missing CIM method parameter
WIP.212	Invalid CIM method parameter value
WIP.228	Operation timeout

635

Table 16 – SetBIOSAttributes() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN, Optional	TargetBIOS	REF	Shall reference the CIM_BIOSElement instance in which the operation is targeted
IN, Optional	CollectionElementName	String	Shall contain the ConcreteCollection containing the BIOS attributes to be modified, as specified by the ConcreteCollection.ElementName property. The value of ConcreteCollection.ElementName supplied for this parameter can be user friendly and shall be unique within the scope of the instantiating Namespace; if the value is not unique, this parameter shall not be supplied. If BIOS attributes represented by the AttributeName parameter are not members of this collection, the SetResult parameter that corresponds to these BIOS Attributes shall return 5 (No Attempt to Set Value due to Error). If CollectionElementName is not specified, the BIOS Attributes represented by the AttributeName parameter can be members of any collection or associated with no collection at all.
IN, REQ	AttributeName[]	Array of strings	Shall contain the BIOS attribute names representing the BIOS attributes to be modified, as specified by BIOSAttribute.AttributeName properties. The specified BIOS attributes must already exist. The values of BIOSAttribute.AttributeName supplied for this parameter shall be unique within the scope of the instantiating Namespace. The BIOS attribute name members of this array must correspond with array members of the values represented by the AttributeValue parameter. If more than one value is specified for a particular BIOS attribute, this parameter shall contain multiple identical array entries describing the BIOS attribute name that corresponds with each respective BIOS attribute value specified by the AttributeValue parameter.
OUT	SetResult[]	Array of uint32	SetResult returns the results of invoking this method for each specified attribute value. Each array element of SetResult contains the result of setting the new value that corresponds with each respective BIOS attribute value specified by the AttributeValue parameter. See Table 17 for possible result values.

Qualifiers	Name	Type	Description/Values
IN, REQ	AttributeValue[]	Array of strings	Shall contain new values to assign to the BIOS attributes specified in the AttributeName parameter. The BIOS attribute value members of this array must correspond with the array members of the names represented by the AttributeName parameter. If more than one value is specified for a particular BIOS attribute, this parameter shall contain an entry for each BIOS attribute value. A value of NULL indicates the factory default values for the BIOSAttribute is requested. If this value is valid, it will be applied to the CurrentValue or PendingValue property of the specified BIOSAttribute depending on the system BIOS implementation and any requirements for a system restart. The result of applying the values are described in the corresponding array entries of the SetResult parameter.
IN, Optional	AuthorizationToken	String	Shall contain a token to modify BIOSAttribute values for this computer system. This is usually the BIOS administrator password. If this is a password, the PasswordEncoding parameter shall be used to denote the format of the password string. This is an embedded instance of CIM_Credential.
IN, Optional	PasswordEncoding	uint32	Shall contain an encoding tag that specifies the format the password string is being passed to the BIOS. See section 7.5.5 for examples of encoding tags.

636

Table 17 – SetBIOSAttributes() Method: SetResult Parameter Values

Result Value	Condition
2 (Set CurrentValue Property)	CIM_BIOSAttribute.CurrentValue property is set to the new value.
3 (Set PendingValue Property)	BIOSAttribute.PendingValue property is set to the new value.
4 (Error Setting Value)	An unspecified error occurred while setting the value.
5 (No Attempt to Set Value due to Error)	No attempt to set the value due to a prior unspecified error
6 (Value-Rolled-Back)	A previously set value was rolled-back to its original value due to a prior unspecified error.

637 **8.5 Profile Conventions for Operations**

638 For each profile class (including associations), the implementation requirements for operations, including
 639 those in the following default list, are specified in class-specific subclauses of this clause.

640 The default list of operations is as follows:

- 641 • GetInstance
- 642 • Associators
- 643 • AssociatorNames
- 644 • References

- 645 • ReferenceNames
- 646 • EnumerateInstances
- 647 • EnumerateInstanceNames

648 **8.6 CIM_BIOSAttribute Operations**

649 Table 18 lists implementation requirements for operations. If implemented, these operations shall be
 650 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 18, all operations
 651 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

652 NOTE: Related profiles may define additional requirements on operations for the profile class.

653 **Table 18 – Operations: CIM_BIOSAttribute**

Operation	Requirement	Messages
ModifyInstance	Not supported	None

654 **8.6.1 CIM_BIOSAttribute — ModifyInstance**

655 The ModifyInstance operation shall not be supported.

656 **8.7 CIM_BIOSElement Operations**

657 All operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

658 NOTE: Related profiles may define additional requirements on operations for the profile class.

659 **8.8 CIM_BIOSService Operations**

660 All operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

661 NOTE: Related profiles may define additional requirements on operations for the profile class.

662 **8.9 CIM_BIOSServiceCapabilities Operations**

663 All operations in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

664 NOTE: Related profiles may define additional requirements on operations for the profile class.

665 **8.10 CIM_SystemBIOS Operations**

666 Table 19 lists implementation requirements for operations. If implemented, these operations shall be
 667 implemented as defined in [DSP0200](#). In addition, and unless otherwise stated in Table 19, all operations
 668 in the default list in 8.5 shall be implemented as defined in [DSP0200](#).

669 NOTE: Related profiles may define additional requirements on operations for the profile class.

670 **Table 19 – Operations: CIM_SystemBIOS**

Operation	Requirement	Messages
Associators	Unspecified	None
AssociatorNames	Unspecified	None

730 **9 Use Cases (Informative)**

731 All use cases are based on the implementation conformance to the DMTF *BIOS Management Profile*.

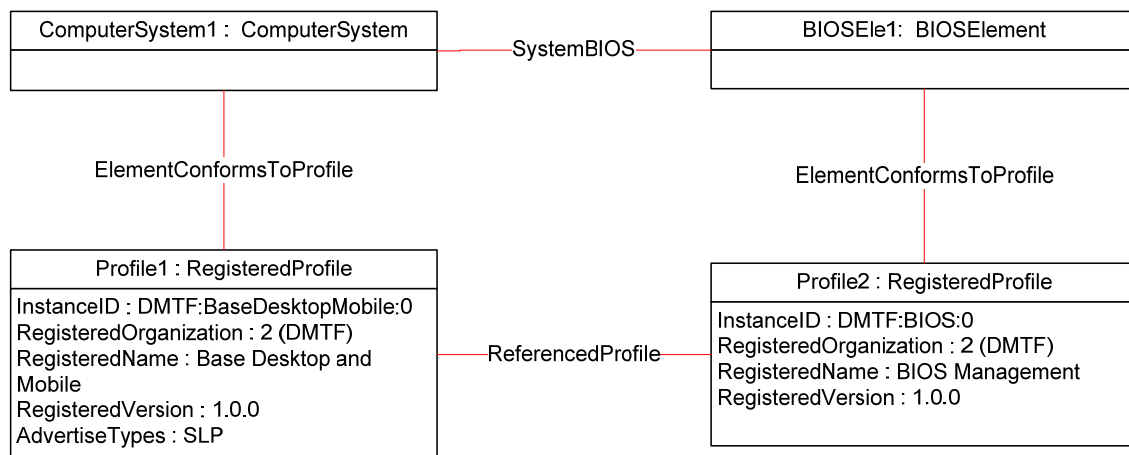

732 **9.1 Object Diagrams**

733 The object diagram in Figure 2 shows how CIM_RegisteredProfile instances are used to identify the
 734 version of the *BIOS Management Profile* with which a CIM_BIOSService instance and its associated
 735 instances are conformant. A CIM_RegisteredProfile instance exists for each profile that is instrumented in
 736 the system. One CIM_RegisteredProfile instance identifies the DMTF [Base Desktop and Mobile Profile](#),
 737 version 1.0.0, a specialization of the DMTF [Computer System Profile](#). The other instance identifies the
 738 DMTF *BIOS Management Profile*, version 1.0.0. The Central Instance is the CIM_BIOSElement instance.
 739 The Scoping Instance is the CIM_ComputerSystem instance.

740 This CIM_ComputerSystem instance is conformant with the [Base Desktop and Mobile Profile](#) version
 741 1.0.0, as indicated by the CIM_ElementConformsToProfile association with the CIM_RegisteredProfile
 742 instance.

743 This CIM_BIOSElement instance is conformant with the *BIOS Management Profile* version 1.0.0, as
 744 indicated by the CIM_ElementConformsToProfile association with the CIM_RegisteredProfile instance.

745 The CIM_ReferencedProfile relationship between the [Base Desktop and Mobile Profile](#) and the *BIOS
 746 Management Profile* places the CIM_BIOSElement instance within the scope of the *BIOS Management
 747 Profile*.

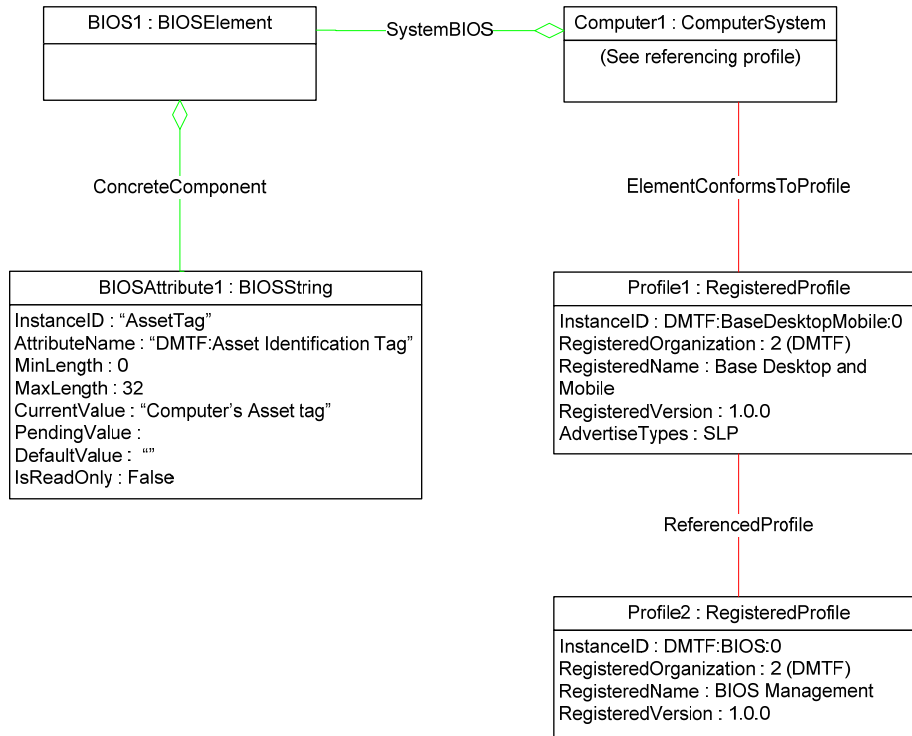

748

749 **Figure 2 – BIOS Management Profile: Object Diagram**

750 **9.2 Object Diagrams**

751 Figure 3 represents a BIOS attribute for a managed system’s BIOS. The CIM_BIOSElement instance that
 752 is referenced by the CIM_ConcreteComponent instance identifies the managed system’s BIOS, and the
 753 CIM_ComputerSystem instance referenced by the CIM_SystemBIOS instance identifies the managed
 754 system.

755 Based on the AttributeName property, BIOSAttribute1 is the computer’s Asset Tag. It is settable based on
 756 the value of the IsReadOnly property.

757

758

Figure 3 – BIOS Management Profile: Object Diagram

759 **9.3 Show All BIOS Attributes in the Computer System**

760 A client can show all of the BIOS attributes in a computer system as follows:

- 761 1) Starting from the CIM_BIOSElement instance that represents the BIOS of the computer system,
- 762 select all of the CIM_BIOSAttribute or CIM_ConcreteCollection instances that are associated
- 763 through CIM_ConcreteComponent instances.
- 764 2) If any CIM_ConcreteCollection instances result, select all of the CIM_BIOSAttribute instances
- 765 that are associated through CIM_OrderedMemberOfCollection instances. These represent the
- 766 BIOS attributes of the computer system.
- 767 3) Iterate through the instances and get the values of the CIM_BIOSAttribute.AttributeName and
- 768 CIM_BIOSAttribute.CurrentValue properties of each instance. These represent the BIOS
- 769 attribute and the value of the attribute.

770 **9.4 Find BIOS Attributes Associated with a Specific Device**

771 A client can find the BIOS attributes associated with a specific device as follows:

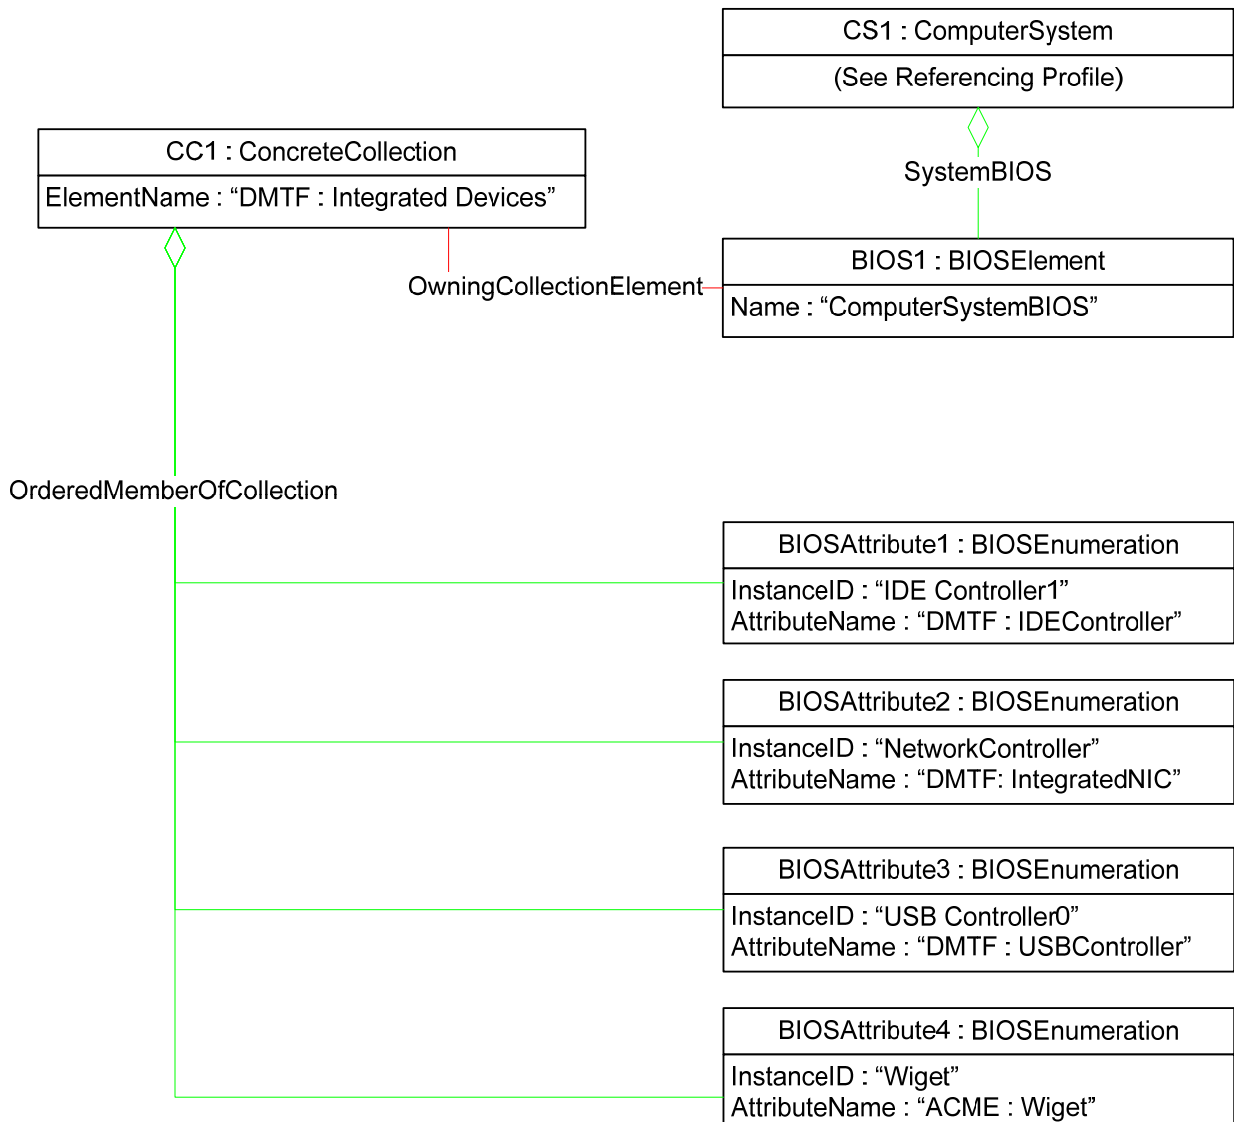

- 772 1) Select all of the CIM_BIOSAttribute or CIM_ConcreteCollection instances that are associated
- 773 with the instance of a subclass of CIM_ManagedElement that represents the given device
- 774 through a CIM_ConcreteDependency instance.
- 775 2) If any CIM_ConcreteCollection instances result, select all of the CIM_BIOSAttribute instances
- 776 that are associated through CIM_OrderedMemberOfCollection instances.

777 In Figure 4, the CIM_BIOSAttribute instance is associated with a CIM_IDEController instance through a

778 CIM_ConcreteDependency instance.

785 **9.5 Find a Collection of Attributes**

786 Figure 6 shows a possible implementation in which BIOS collections are supported. This support is
 787 indicated by the existence of CC1 associated through the CIM_OwningCollectionElement instance with
 788 BIOS1. The presence of a DMTF-defined unique identifier as a value for the
 789 CIM_ConcreteCollection.ElementName property indicates that the collection is static and the value may
 790 not be modified.

791

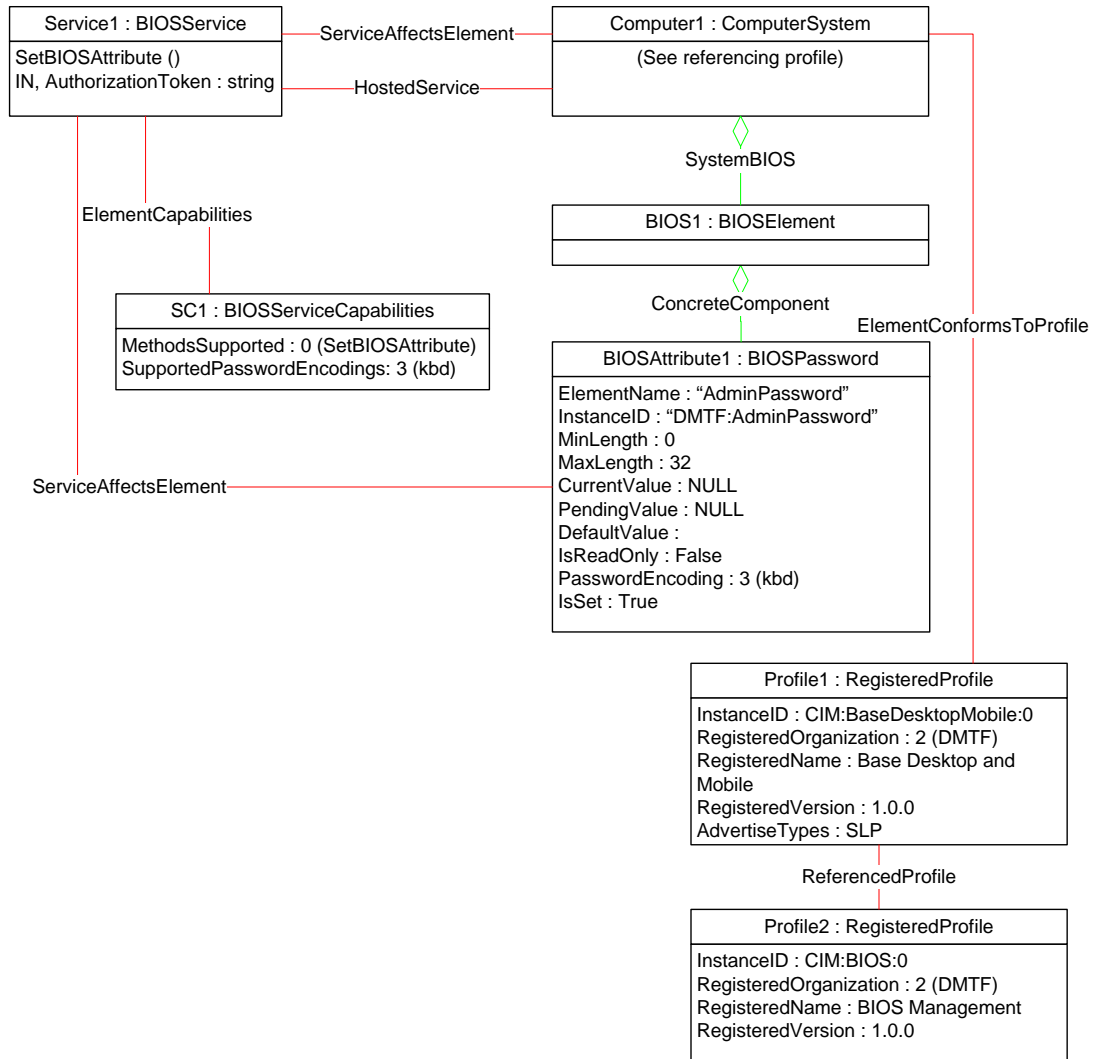

792

Figure 6 – BIOS Management Profile: Object Diagram

793 **9.6 Determine Whether a BIOS Attribute’s Value Can Be Modified**

794 A client can determine if a given BIOS attribute’s value can be modified by querying the
 795 CIM_BIOSAttribute.IsReadOnly property. If the value is FALSE, the value can be modified and the client
 796 can use the CIM_ServiceAffectsElement association to locate the service hosting the method or methods
 797 to change the value. The client can also expect an advertisement of the available methods by traversing
 798 the CIM_ElementCapabilities instance to the CIM_BIOSServiceCapabilities instance.

799 In Figure 7, the CIM_BIOSAttribute instance represents a BIOS password. Based on the IsReadOnly
 800 property, this attribute can be modified by the SetBIOSAttribute() method. Based on the
 801 CIM_BIOSServiceCapabilities.SupportedEncodings property, the BIOS can decipher only a keyboard
 802 scan code representation of the password. Based on the
 803 CIM_BIOSServiceCapabilities.MethodsSupported property, the CIM_BIOSService.SetBIOSAttribute()
 804 method will be used to make any changes to this attribute's value.

805

806

Figure 7 – BIOS Management Profile: Object Diagram

807 9.7 Modifying a BIOS Attribute

808 A client can change a BIOS attribute's value as follows:

809 Invoke the CIM_BIOSService.SetBIOSAttribute() method, specifying the AttributeName and
 810 AttributeValue parameters.

811 **9.7.1 Modifying a BIOS Attribute (Password Required)**

812 An implementation may require a BIOS administrator password as an input parameter during the
 813 invocation of the CIM_BIOSService.SetBIOSAttribute() method. In addition to the requirements in 9.7, an
 814 embedded CIM_Credential instance that represents the BIOS password shall also be provided as the
 815 AuthorizationToken input parameter as defined in the CIM_BIOSService class.

816 **9.7.2 Modifying a Group of BIOS Attributes**

817 A client can change a group of BIOS attribute values by invoking the
 818 CIM_BIOSService.SetBIOSAttributes() method and specifying parameters including
 819 CollectionElementName, AttributeName, and AttributeValue.

820 **10 CIM Elements**

821 Table 29 shows the list of CIM Elements for this profile and details their requirements. The
 822 implementation requirements for the classes and properties described in this section are defined in
 823 section 7 (“Implementation”).

824 **Table 29 – CIM Elements: BIOS Management Profile**

Element Name	Requirement	Description
Classes		
CIM_BIOSAttribute	Mandatory	See 7.1 and 10.1.
CIM_BIOSElement	Mandatory	See 10.8.
CIM_BIOSService	Conditional	See 7.9 and 10.2.
CIM_BIOSEnumeration	Conditional	See 7.2 and 10.4.
CIM_BIOSInteger	Optional	See 7.3 and 10.5.
CIM_BIOSPassword	Mandatory	See 10.6.
CIM_BIOSString	Optional	See 7.4 and 10.7.
CIM_BIOSServiceCapabilities	Conditional	See 7.11, 7.9, and 10.3.
CIM_ConcreteComponent	Conditional	See 7.7 and 10.11.
CIM_SystemBIOS	Mandatory	See 7.6 and 10.10.
CIM_ConcreteDependency	Optional	See 7.10 and 10.9.
CIM_ElementCapabilities	Optional	See 7.11 and 10.12.
CIM_RegisteredProfile	Mandatory	See 10.13.
CIM_ConcreteCollection	Optional	See 7.12 and 10.14.
CIM_OrderedMemberOfCollection	Optional	See 7.12.2.1 and 10.15.
CIM_OwningCollectionElement	Optional	See 7.12.1 and 10.16.
CIM_ServiceAffectsElement	Optional	See 7.13, 10.17, and 10.18.
CIM_HostedService	Optional	See 10.19.
Indications		
None defined in this profile		

825 **10.1 CIM_BIOSAttribute**

826 The CIM_BIOSAttribute class is implemented to represent a BIOS attribute. Table 30 contains the
827 requirements for elements of this class.

828 **Table 30 – Class: CIM_BIOSAttribute**

Elements	Requirement	Notes
InstanceID	Mandatory	Key: This element shall specify the unique identifier for an instance of this class within the implementation namespace.
AttributeName	Mandatory	See 7.1.1.
CurrentValue	Mandatory	See 7.1.2.
DefaultValue	Optional	See 7.1.3.
PendingValue	Conditional	See 7.1.4.
IsReadOnly	Mandatory	
IsOrderedList	Optional	If the implementation decides to represent the BIOS attribute with multiple values, this property can be used to represent precedence of these values.

829 **10.2 CIM_BIOSService**

830 The CIM_BIOSService class shall be implemented when an implementation has BIOS attributes with
831 values that are settable as indicated by the CIM_BIOSAttribute.IsReadOnly property having the value
832 FALSE. The CIM_BIOSService class provides methods to modify the value of the
833 CIM_BIOSAttribute.CurrentValue or CIM_BIOSAttribute.PendingValue property of a CIM_BIOSAttribute
834 instance. Support for any of the extrinsic methods is optional.

835 Table 31 contains the requirements for elements of this class.

836 **Table 31 – Class: CIM_BIOSService**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	Key
SystemName	Mandatory	Key
CreationClassName	Mandatory	Key
Name	Mandatory	Key
SetBIOSAttribute()	Optional	See 8.1. At least one extrinsic method shall be implemented for this class.
SetBIOSAttributes()	Optional	See 8.4. At least one extrinsic method shall be implemented for this class.
SetBIOSAttributeEmbeddedInstance()	Optional	See 8.2. At least one extrinsic method shall be implemented for this class.
RestoreBIOSDefaults()	Optional	See 8.3. At least one extrinsic method shall be implemented for this class.

837 10.3 CIM_BIOSServiceCapabilities

838 The CIM_BIOSServiceCapabilities class is used to advertise the capabilities of a CIM_BIOSService
839 instance.

840 Table 32 contains the requirements for elements of this class.

841 **Table 32 – Class: CIM_BIOSServiceCapabilities**

Elements	Requirement	Notes
InstanceID	Mandatory	Key: This element shall specify the unique identifier for an instance of this class within the implementation namespace.
MethodsSupported	Mandatory	
SupportedPasswordEncodings	Optional	This element may be used to specify the password encoding supported by the BIOS. See 7.5.5.

842 10.4 CIM_BIOSEnumeration

843 The CIM_BIOSEnumeration class is used to extend a CIM_BIOSAttribute instance to advertise possible
844 value information of enumeration data types. Elements of this class shall be returned in addition to the
845 elements defined in Table 30 for the CIM_BIOSAttribute class.

846 Table 33 contains the requirements for elements of this class.

847 **Table 33 – Class: CIM_BIOSEnumeration**

Elements	Requirement	Notes
PossibleValues	Mandatory	See 7.2.1.
PossibleValuesDescription	Optional	This element may be used to provide descriptions for respective values in the PossibleValues property.

848 10.5 CIM_BIOSInteger

849 The CIM_BIOSInteger class is used to extend a CIM_BIOSAttribute instance to provide additional detail
850 and behavior information of integer data types. Elements of this class shall be returned in addition to the
851 elements defined in Table 30 for the CIM_BIOSAttribute class.

852 Table 34 contains the requirements for elements of this class.

853 **Table 34 – Class: CIM_BIOSInteger**

Elements	Requirement	Notes
LowerBound	Mandatory	See 7.3.1.
UpperBound	Mandatory	See 7.3.1.
ProgrammaticUnit	Optional	See 7.3.2.
ScalarIncrement	Optional	See 7.3.3.

854 **10.6 CIM_BIOSPassword**

855 The CIM_BIOSPassword class is used to extend a CIM_BIOSAttribute instance to provide additional
 856 detail and behavior information of a BIOS's passwords. Elements of this class shall be returned in
 857 addition to the elements defined in Table 30 for the CIM_BIOSAttribute class.

858 Table 35 contains the requirements for elements of this class.

859 **Table 35 – Class: CIM_BIOSPassword**

Elements	Requirement	Notes
IsSet	Mandatory	See 7.5.6.
MinLength	Mandatory	See 7.5.1.
MaxLength	Mandatory	See 7.5.2.
CurrentValue	Mandatory	OVERRIDE: This element shall return an empty array if IsSet is TRUE.
PendingValue	Mandatory	OVERRIDE: This element shall return an empty array if IsSet is TRUE.
PasswordEncoding	Optional	See 7.5.5.

860 **10.7 CIM_BIOSString**

861 The CIM_BIOSString class is used to extend a CIM_BIOSAttribute instance to provide additional detail
 862 and behavior information of string data types. Elements of this class shall be returned in addition to the
 863 elements defined in Table 30 for the CIM_BIOSAttribute class.

864 Table 36 contains the requirements for elements of this class.

865 **Table 36 – Class: CIM_BIOSString**

Elements	Requirement	Notes
StringType	Optional	This element may be used to describe the type of string for the BIOS attribute.
MinLength	Mandatory	See 7.4.2.
MaxLength	Mandatory	See 7.4.2.
ValueExpression	Conditional	See 7.4.1.

866 **10.8 CIM_BIOSElement**

867 The CIM_BIOSElement class is used to represent the BIOS Image and Option ROM.

868 Table 37 contains the requirements for elements of this class.

869 **Table 37 – Class: CIM_BIOSElement**

Elements	Requirement	Notes
Manufacturer	Mandatory	This element shall identify the manufacturer of the BIOS.
PrimaryBIOS	Optional	This element shall indicate if the BIOS represented by the instance is the primary BIOS of the computer system.
Version	Mandatory	Key
Name	Mandatory	Key

Elements	Requirement	Notes
SoftwareElementState	Mandatory	Key
SoftwareElementID	Mandatory	Key
TargetOperatingSystem	Mandatory	Key: This element shall identify the operating system environment of the BIOS, if applicable. This property shall be set to 66 (Not Applicable) if the BIOS operating system environment is not applicable for the implementation.
RegistryURIs	Optional	This element shall indicate the publication location of the registry or registries to which the implementation complies, such as a well-known URL.

870 **10.9 CIM_ConcreteDependency**

871 The CIM_ConcreteDependency association is used to relate the dependency of a concrete subclass of a
 872 CIM_ManagedElement instance to a CIM_BIOSAttribute or CIM_ConcreteCollection instance. An
 873 instance of this association is conditional on the existence of an instance of a concrete subclass of
 874 CIM_ManagedElement that needs to be associated with a CIM_BIOSAttribute or CIM_ConcreteCollection
 875 instance. Table 38 contains the requirements for elements of this class.

876 **Table 38 – Class: CIM_ConcreteDependency**

Elements	Requirement	Notes
Antecedent	Mandatory	Key: This element shall be a reference to an instance of the CIM_BIOSAttribute or CIM_ConcreteCollection class.
Dependent	Mandatory	Key: This element shall be a reference to an instance of a concrete subclass of the CIM_ManagedElement class.

877 **10.10 CIM_SystemBIOS**

878 The CIM_SystemBIOS class associates a CIM_BIOSElement instance with a CIM_ComputerSystem
 879 instance of which the CIM_BIOSElement instance is a member. Table 39 contains the requirements for
 880 elements of this class.

881 **Table 39 – Class: CIM_SystemBIOS**

Elements	Requirement	Notes
GroupComponent	Mandatory	Key: This element shall be a reference to the CIM_ComputerSystem instance of which the current CIM_BIOSElement instance is a member.
PartComponent	Mandatory	Key: This element shall be a reference to the current CIM_BIOSElement instance.

882 **10.11 CIM_ConcreteComponent**

883 The CIM_ConcreteComponent class associates a CIM_BIOSAttribute instance with a CIM_BIOSElement
 884 instance of which the CIM_BIOSAttribute instance is a member. Table 40 contains the requirements for
 885 elements of this class.

886

Table 40 – Class: CIM_ConcreteComponent

Elements	Requirement	Notes
GroupComponent	Mandatory	Key: This element shall be a reference to the CIM_BIOSElement instance of which the current CIM_BIOSAttribute instance is a member.
PartComponent	Mandatory	Key: This element shall be a reference to the current CIM_BIOSAttribute instance.

887 **10.12 CIM_ElementCapabilities**

888 The CIM_ElementCapabilities class associates a CIM_BIOSService instance with the
 889 CIM_BIOSServiceCapabilities instance that advertises the capabilities of the service.

890 Table 41 contains the requirements for elements of this class.

891

Table 41 – Class: CIM_ElementCapabilities

Elements	Requirement	Notes
ManagedElement	Mandatory	Key: This element shall be a reference to CIM_BIOSService instance.
Capabilities	Mandatory	Key: This element shall be a reference to the respective CIM_BIOSServiceCapabilities instance.

892 **10.13 CIM_RegisteredProfile**

893 The CIM_RegisteredProfile class is defined by the [Profile Registration Profile](#). The requirements denoted
 894 in Table 42 are in addition to those mandated by the [Profile Registration Profile](#).

895

Table 42 – Class: CIM_RegisteredProfile

Elements	Requirement	Description
RegisteredName	Mandatory	This element shall have a value of “BIOS Management”.
RegisteredVersion	Mandatory	This element shall have a value of “1.0.0”.
RegisteredOrganization	Mandatory	This element shall have a value of 2 (DMTF).

896 **10.14 CIM_ConcreteCollection**

897 The CIM_ConcreteCollection class represents collections of CIM_BIOSAttribute instances. Table 43
 898 contains the requirements for elements of this class.

899

Table 43 – Class: CIM_ConcreteCollection

Elements	Requirement	Notes
InstanceID	Mandatory	Key: This element shall specify the unique identifier for an instance of this class within the Implementation namespace.
ElementName	Mandatory	See 7.12.4.
Description	Optional	This element may be used to describe the collection of BIOS attributes.

900 **10.15 CIM_OrderedMemberOfCollection**

901 The CIM_OrderedMemberOfCollection class is used to aggregate CIM_BIOSAttribute instances to a
 902 CIM_ConcreteCollection instance. The existence of a CIM_OrderedMemberOfCollection instance is
 903 conditional on the existence of a CIM_ConcreteCollection instance. This class identifies an attribute or
 904 collection of attributes as being part of a specific collection of indications. Table 44 contains the
 905 requirements for elements of this class.

906 **Table 44 – Class: CIM_OrderedMemberOfCollection**

Elements	Requirement	Notes
Collection	Mandatory	Key: This element shall reference a CIM_ConcreteCollection instance.
Member	Mandatory	Key: This element shall reference a CIM_BIOSAttribute instance.
AssignedSequence	Optional	See 7.12.2.1.

907 **10.16 CIM_OwningCollectionElement**

908 The CIM_OwningCollectionElement class is used to associate CIM_ConcreteCollection instances with a
 909 CIM_BIOSElement instance. The existence of a CIM_OwningCollectionElement instance is conditional on
 910 the existence of a CIM_ConcreteCollection instance. Table 45 contains the requirements for elements of
 911 this class.

912 **Table 45 – Class: CIM_OwningCollectionElement**

Elements	Requirement	Notes
OwningElement	Mandatory	Key: This element shall reference the CIM_BIOSElement instance.
OwnedElement	Mandatory	Key: This element shall reference a CIM_ConcreteCollection instance.

913 **10.17 CIM_ServiceAffectsElement — BIOSAttribute or ConcreteCollection**

914 The CIM_ServiceAffectsElement class is used to associate CIM_BIOSAttribute instances or
 915 CIM_ConcreteCollection instances with a CIM_BIOSService instance. If CIM_BIOSService is instantiated
 916 and there is at least one respective CIM_BIOSAttribute instance where the
 917 CIM_BIOSAttribute.IsReadOnly property has a value of FALSE, CIM_BIOSService shall be associated
 918 with CIM_BIOSAttribute or CIM_ConcreteCollection instances through CIM_ServiceAffectsElement
 919 instances. Table 46 contains the requirements for elements of this class.

920 **Table 46 – Class: CIM_ServiceAffectsElement–BIOSAttribute**

Elements	Requirement	Notes
AffectingElement	Mandatory	Key: This element shall reference a CIM_BIOSService instance.
AffectedElement	Mandatory	Key: This element shall be a reference to a CIM_BIOSAttribute or CIM_ConcreteCollection instance.

921 **10.18 CIM_ServiceAffectsElement — ComputerSystem**

922 The CIM_ServiceAffectsElement class is used to associate CIM_ComputerSystem instances with a
 923 CIM_BIOSService instance. If CIM_BIOSService is instantiated and there is at least one respective
 924 CIM_BIOSAttribute instance where the CIM_BIOSAttribute.IsReadOnly property has a value of FALSE,
 925 CIM_BIOSService shall be associated with CIM_ComputerSystem instances through
 926 CIM_ServiceAffectsElement instances. Table 47 contains the requirements for elements of this class.

927 **Table 47 – Class: CIM_ServiceAffectsElement–ComputerSystem**

Elements	Requirement	Notes
AffectingElement	Mandatory	Key: This element shall reference a CIM_BIOSService instance.
AffectedElement	Mandatory	Key: This element shall be a reference to a CIM_ComputerSystem instance.

928 **10.19 CIM_HostedService**

929 The CIM_HostedService class is used to associate CIM_BIOSService instances to the
 930 CIM_ComputerSystem instance that represents the computer system on which it is hosted. If
 931 CIM_BIOSService is instantiated, the CIM_ComputerSystem instance shall be associated with the
 932 CIM_BIOSService instance through a CIM_HostedService instance. Table 48 contains the requirements
 933 for elements of this class.

934 **Table 48 – Class: CIM_HostedService**

Elements	Requirement	Notes
Antecedent	Mandatory	Key: This element shall reference of the Scoping Instance (CIM_ComputerSystem instance).
Dependant	Mandatory	Key: This element shall be a reference to a CIM_BIOSService instance.

935
936
