11 DMTF is a not-for-profit association of industry members dedicated to promoting enterprise and systems
12 management and interoperability. Members and non-members may reproduce DMTF specifications and
13 documents, provided that correct attribution is given. As DMTF specifications may be revised from time to
14 time, the particular version and release date should always be noted.

15 Implementation of certain elements of this standard or proposed standard may be subject to third party
16 patent rights, including provisional patent rights (herein "patent rights"). DMTF makes no representations
17 to users of the standard as to the existence of such rights, and is not responsible to recognize, disclose,
18 or identify any or all such third party patent right, owners or claimants, nor for any incomplete or
19 inaccurate identification or disclosure of such rights, owners or claimants. DMTF shall have no liability to
20 any party, in any manner or circumstance, under any legal theory whatsoever, for failure to recognize,
21 disclose, or identify any such third party patent rights, or for such party's reliance on the standard or
22 incorporation thereof in its product, protocols or testing procedures. DMTF shall have no liability to any
23 party implementing such standard, whether such implementation is foreseeable or not, nor to any patent
24 owner or claimant, and shall have no liability or responsibility for costs or losses incurred if a standard is
25 withdrawn or modified after publication, and shall be indemnified and held harmless by any party
26 implementing the standard from any and all claims of infringement by a patent owner for such
27 implementations.

28 For information about patents held by third-parties which have notified the DMTF that, in their opinion,
29 such patent may relate to or impact implementations of DMTF standards, visit
30 <http://www.dmtf.org/about/policies/disclosures.php>.

210

211

Introduction

212 The information in this specification and referenced specifications is intended to be sufficient for a
213 provider or consumer of this data to identify unambiguously the classes, properties, methods, and values
214 that shall be instantiated and manipulated using the DMTF Common Information Model (CIM) core and
215 common model definitions.

216 The target audience for this specification is implementers who are writing CIM-based providers or
217 consumers of management interfaces that represent the components described in this document.

218

Media Redirection Profile

219 1 Scope

220 The *Media Redirection Profile* extends the management capabilities of referencing profiles and provides
221 the capability to manage Media redirections provided by the system.

222 2 Normative References

223 The following referenced documents are indispensable for the application of this document. For dated or
224 versioned references, only the edition cited (including any corrigenda or DMTF update versions) applies.
225 For references without a date or version, the latest published edition of the referenced document
226 (including any corrigenda or DMTF update versions) applies.

227 2.1 Approved References

243 3 Terms and Definitions

244 For the purposes of this document, the following terms and definitions apply. For the purposes of this
245 document, the terms and definitions given in [DSP1033](#) and [DSP1001](#) also apply.

246 3.1

247 **can**

248 used for statements of possibility and capability, whether material, physical, or causal

249 3.2

250 **cannot**

251 used for statements of possibility and capability, whether material, physical, or causal

- 252 **3.3**
253 **conditional**
254 indicates requirements to be followed strictly to conform to the document when the specified conditions
255 are met
- 256 **3.4**
257 **mandatory**
258 indicates requirements to be followed strictly to conform to the document and from which no deviation is
259 permitted
- 260 **3.5**
261 **may**
262 indicates a course of action permissible within the limits of the document
- 263 **3.6**
264 **optional**
265 indicates a course of action permissible within the limits of the document
- 266 **3.7**
267 **referencing profile**
268 indicates a profile that owns the definition of this class and can include a reference to this profile in its
269 "Referenced Profiles" table
- 270 **3.8**
271 **shall**
272 indicates requirements to be followed strictly to conform to the document and from which no deviation is
273 permitted
- 274 **3.9**
275 **shall not**
276 indicates requirements to be followed strictly to conform to the document and from which no deviation is
277 permitted
- 278 **3.10**
279 **should**
280 indicates that among several possibilities, one is recommended as particularly suitable, without
281 mentioning or excluding others, or that a certain course of action is preferred but not necessarily required
- 282 **3.11**
283 **should not**
284 indicates that a certain possibility or course of action is deprecated but not prohibited
- 285 **3.12**
286 **unspecified**
287 indicates that this profile does not define any constraints for the referenced CIM element or operation
- 288 **3.13**
289 **Emulated Media Device**
290 the Media device locally emulated on the managed system which can be redirected to a remote system
291 that contains the physical Media device
- 292 **3.14**
293 **Remote System**
294 the system that contains the physical Media device, to which the managed system can establish a
295 network connection for a Emulated Media Device

296 **3.15**

297 **Media Redirection**

298 an arrangement that encompasses an instance of CIM_RedirectionService and an instance of
299 CIM_MediaRedirectionSAP that are joined by a CIM_ServiceAccessBySAP association

300 **3.16**

301 **Media Redirection SAP**

302 the Service Access Point for a Media Redirection Session as modeled by an instance of
303 CIM_MediaRedirectionSAP that is part of a Media Redirection

304 **3.17**

305 **Media Redirection Service**

306 the instance of CIM_RedirectionServiceRedirectionService that is part of a Media Redirection

307 **3.18**

308 **Media Redirection Session**

309 the context and elements of a particular Media Redirection SAP as modeled by an instance of
310 CIM_MediaRedirectionSAP

311 **4 Symbols and Abbreviated Terms**

312 The following abbreviations are used in this document.

313 **4.1**

314 **HID**

315 Human Interface Device

316 **4.2**

317 **MSD**

318 Media Storage Device

319 **4.3**

320 **SAP**

321 Service Access Point

322 **5 Synopsis**

323 **Profile Name:** Media Redirection

324 **Version:** 1.0.0

325 **Organization:** DMTF

326 **CIM Schema Version:** 2.22.0

327 **Central Class:** CIM_RedirectionService

328 **Scoping Class:** CIM_ComputerSystem

329 The *Media Redirection Profile* extends the management capability of the referencing profiles by adding
330 the capability to describe information about Media redirections. A Media redirection redirects I/O
331 transactions from a managed system's storage media subsystem to a remote storage media service. If
332 the storage media subsystem is USB based, the *USB Redirection Profile* should be used instead of the
333 *Media Redirection Profile*.

334 CIM_RedirectionService shall be the Central Class of this profile. The instance of
335 CIM_RedirectionService shall be the Central Instance of this profile.

336 CIM_ComputerSystem shall be the Scoping Class of this profile. The instance of CIM_ComputerSystem
 337 with which the Central Instance is associated through an instance of CIM_HostedService shall be the
 338 Scoping Instance of this profile.

339 Table 1 identifies profile on which this profile has a dependency.

340

Table 1 – Referenced Profiles

Profile Name	Organization	Version	Relationship	Behavior
Profile Registration	DMTF	1.0.0	Mandatory	

341 6 Description (Informative)

342 The *Media Redirection Profile* describes the necessary elements needed to provide the capability to
 343 manage the redirection of Media devices. The profile could manage the following Media redirection
 344 capabilities of typical computer systems:

- 345 • Systems can redirect a locally emulated Media device to a physical Media device or non-Media
 346 device present on a remote system through a network session
- 347 • Each Media Redirection SAP can have multiple locally emulated Media devices.
- 348 • Systems can support multiple Media Redirection SAPs concurrently
- 349 • A Media Redirection SAP can initiate the connection to the remote system or listen for a
 350 connection request from the remote system

351 A Media Redirection is represented by an instance of CIM_RedirectionService and an instance of
 352 MediaRedirectionSAP that are joined by an instance of the CIM_ServiceAccessBySAP association.

353 A Media Redirection can be in an active, inactive, or available state. When the Media Redirection is
 354 active, the Media devices are redirected. The state management of the Media Redirection can be
 355 performed by managing the state of the Media Redirection SAP (as modeled by
 356 CIM_MediaRedirectionSAP) and the state of the Media Redirection Service (as modeled by
 357 CIM_RedirectionService).

358 The capabilities of a Media Redirection are represented by an instance of
 359 CIM_MediaRedirectionCapabilities connected to an instance of CIM_RedirectionService by a
 360 CIM_ElementCapabilities association. These capabilities include such things as the type and maximum of
 361 number devices that can be redirected and support for the RequestStateChange method.

362 Each instance of CIM_RedirectionService is connected to an instance of CIM_ComputerSystem that
 363 represents the system that hosts the service by a CIM_HostedService association. Each instance of
 364 CIM_RedirectionService is connected to an instance of CIM_ComputerSystem that represents the
 365 managed system with the storage media subsystem that is being redirected by a
 366 CIM_ServiceAffectsElement association. These instance(s) of CIM_ComputerSystem may or may not be
 367 the same instance. The instance of CIM_ComputerSystem associated to CIM_RedirectionService by an
 368 instance of CIM_HostedService represents the Media Redirection Scoping Class.

369 Each instance of CIM_MediaRedirectionSAP is connected to an instance of CIM_ComputerSystem that
 370 represents the system that hosts the Media Redirection Session by a CIM_SAPAvailableForElement
 371 association. Each instance of CIM_MediaRedirectionSAP is connected to an instance of
 372 CIM_ComputerSystem that represents the managed system with the storage media subsystem that is
 373 being redirected by a CIM_HostedAccessPoint association. These instance(s) of CIM_ComputerSystem
 374 may or may not be the same instance. The instance of CIM_ComputerSystem associated to
 375 CIM_RedirectionService by an instance of CIM_HostedService represents the Media Redirection Scoping
 376 Class.

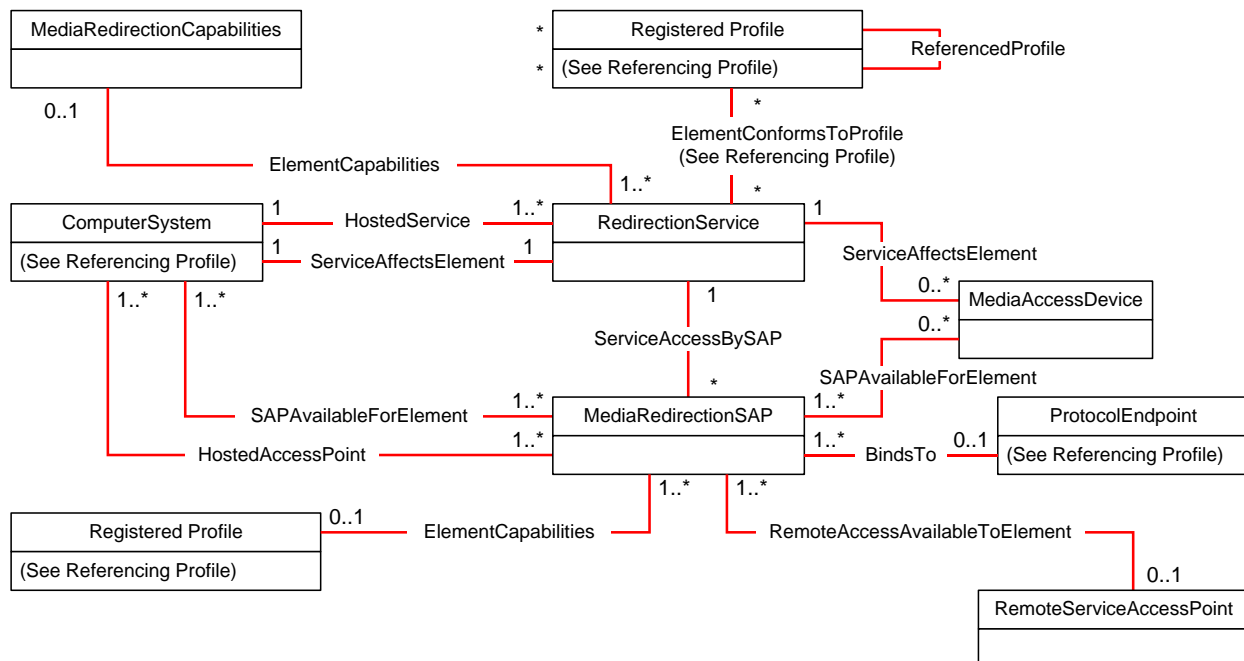

377 Each CIM_MediaAccessDevice or subclass of CIM_MediaAccessDevice that is redirected to a Media
 378 redirection SAP is connected to the instance of CIM_MediaRedirectionSAP that represents the session
 379 by an instance of CIM_SAPAvailableForElement.

380 If an instance of CIM_ProtocolEndpoint exists and represents the endpoint where the Media Redirection
 381 SAP can be accessed, then an instance of CIM_BindsTo is used to associate the instance of
 382 CIM_MediaRedirectionSAP to the instance of CIM_ProtocolEndpoint.

383 If an instance of CIM_EnabledLogicalElementCapabilities exists and represents the capabilities of the
 384 Media Redirection SAP, then an instance of CIM_ElementCapabilities is used to associate the instance of
 385 CIM_MediaRedirectionSAP to the instance of CIM_EnabledLogicalElementCapabilities.

386 If an instance of CIM_RemoteServiceAccessPoint exists and represents the remote end of the Media
 387 Redirection SAP, then an instance of CIM_RemoteAccessAvailableForElement is used to associate the
 388 instance of CIM_MediaRedirectionSAP to the instance of CIM_RemoteServiceAccessPoint.

389 Figure 1 presents the class diagram for the *Media Redirection Profile*. For simplicity, the prefix *CIM_* has
 390 been removed from the names of the classes.

391

392 **Figure 1 – Media Redirection Profile: Class Diagram**

393 7 Implementation

394 This section details the requirements related to the arrangement of instances and their properties for
 395 implementations of this profile. Section 7.10.2 describes the class methods required by the profile.

396 7.1 Representing a Media Redirection

397 A Media Redirection is represented by an instance of CIM_RedirectionService and an instance of
 398 CIM_MediaRedirectionSAP connected by an instance of the CIM_ServiceAccessBySAP association.

399 The CIM_ServiceAccessBySAP association's Antecedent property shall reference the
400 CIM_RedirectionService instance, and its Dependent property shall reference the
401 CIM_MediaRedirectionSAP instance.

402 **7.2 Representing a Media Redirection Service**

403 A Media Redirection Service shall be represented by an instance of CIM_RedirectionService.

404 **7.2.1 Relationship to the Computer System Hosting the Service**

405 The relationship between the Media Redirection Service and the computer system that hosts the Service
406 shall be modeled with an instance of the CIM_HostedService association. When used in this way, the
407 CIM_HostedService association's Antecedent property shall reference the CIM_ComputerSystem
408 instance, and its Dependent property shall reference the CIM_RedirectionService instance.

409 **7.2.2 Relationship to the Computer System with the Emulated Media Devices**

410 The relationship between the Media Redirection Service and the computer system that contains one or
411 more emulated Media Devices shall be modeled with an instance of the CIM_ServiceAffectsElement
412 association. When used in this way, the CIM_ServiceAffectsElement association's AffectingElement
413 property shall reference the CIM_RedirectionService instance, and its AffectedElement property shall
414 reference the CIM_ComputerSystem instance.

415 **7.2.3 Relationship to the Capabilities of the Service**

416 The capabilities of a Media Redirection Service may be modeled by an instance of
417 CIM_MediaRedirectionCapabilities.

418 When an instance of CIM_MediaRedirectionCapabilities exists for this purpose, its relationship to the
419 Media Redirection Service shall be modeled with an instance of CIM_ElementCapabilities. When used in
420 this way, the CIM_ElementCapabilities association's ManagedElement property shall reference the
421 CIM_RedirectionService, and its Capabilities property shall reference CIM_MediaRedirectionCapabilities.

422 **7.2.4 CIM_RedirectionService.RedirectionServiceType**

423 The RedirectionServiceType property shall match the value 5 (Media).

424 **7.2.5 Maximum Number of Concurrently Enabled Redirection SAPs**

425 The Media Redirection Service may support multiple Media Redirection SAPs; however, there may be a
426 limitation to the number of concurrent redirections.

427 The CIM_RedirectionService.MaxCurrentEnabledSAPs property shall contain the maximum number of
428 instances of CIM_MediaRedirectionSAP instances that have an EnabledState property value of 2
429 (Enabled) that may be associated to the instance of CIM_RedirectionService.

430 **7.2.6 CIM_RedirectionService.ElementName**

431 The ElementName property shall be formatted as a free-form string of variable length (pattern “.*”).

432 The ElementName property may support being modified by the ModifyInstance operation. (See 8.17.1.1.)
433 This behavior is conditional. The following sections describe the CIM elements and behavior required to
434 determine whether an implementation supports client modification of the ElementName property.

435 **7.2.6.1 Modifying ElementName Is Supported – Conditional**

436 This section describes the CIM elements and behavior requirements when an implementation supports
437 client modification of the CIM_RedirectionService.ElementName property.

438 An instance of CIM_MediaRedirectionCapabilities shall be associated with the CIM_RedirectionService
439 instance through an instance of the CIM_ElementCapabilities association.

440 The CIM_MediaRedirectionCapabilities.ElementNameEditSupported property shall have a value of
441 TRUE.

442 The CIM_MediaRedirectionCapabilities.MaxElementNameLen property shall be implemented.

443 **7.2.6.2 Modifying ElementName Is Not Supported**

444 This section describes the CIM elements and behaviors that shall be implemented when the
445 CIM_RedirectionService.ElementName does not support being modified by the ModifyInstance operation.

446 An instance of CIM_MediaRedirectionCapabilities may be associated with the CIM_RedirectionService
447 instance through an instance of CIM_ElementCapabilities.

448 When an instance of CIM_MediaRedirectionCapabilities exists, its ElementNameEditSupported property
449 shall have a value of FALSE.

450 When an instance of CIM_MediaRedirectionCapabilities exists, its MaxElementNameLen property may be
451 implemented, but the value of the MaxElementNameLen property is irrelevant in this context.

452 **7.3 Representing the Capabilities of a Media Redirection Service**

453 When the Media Redirection Service does not support creating Media Redirection SAPs, there may be an
454 instance of CIM_MediaRedirectionCapabilities associated with the instance of CIM_RedirectionService
455 through an instance of the CIM_ElementCapabilities association.

456 When the Media Redirection Service does support creating Media Redirection SAPs, there shall be one
457 instance of CIM_MediaRedirectionCapabilities associated with the instance of CIM_RedirectionService
458 through an instance of the CIM_ElementCapabilities association.

459 At most one instance of CIM_MediaRedirectionCapabilities shall be associated with the instance of
460 CIM_RedirectionService.

461 The Media Redirection Service may constrain the number and type of Media Devices that can be
462 redirected. These constraints are represented by properties in the instance of
463 CIM_MediaRedirectionCapabilities that is associated with the instance of CIM_RedirectionService.

464 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
465 CIM_RedirectionService and the Media Redirection Service does not support creating Media Redirection
466 SAPs, the properties of CIM_MediaRedirectionCapabilities shall reflect the pre-configured Media
467 Redirection SAPs for that service.

468 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
469 CIM_RedirectionService and the Media Redirection Service does support creating Media Redirection
470 SAPs, the properties of CIM_MediaRedirectionCapabilities shall reflect the maximum values that can be
471 supported across all the Media Redirection SAPs that are associated with the Media Redirection Service.

472 **7.3.1 Supported Devices**

473 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
474 CIM_RedirectionService, the CIM_MediaRedirectionCapabilities.DevicesSupported array property shall
475 contain an enumeration that identifies the devices supported. The devices that may be supported are the
476 devices that are modeled by the CIM_MediaAccessDevice or a subclass of the CIM_MediaAccessDevice
477 class.

478 **7.3.2 MaxDevicesSupported**

479 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
480 CIM_RedirectionService, the CIM_MediaRedirectionCapabilities.MaxDevicesSupport array property shall
481 contain the number of devices that are supported for the corresponding device that is specified in the
482 DevicesSupported array property.

483 **7.3.3 SAPCapabilitiesSupported**

484 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
485 CIM_RedirectionService, the CIM_MediaRedirectionCapabilities.SAPCapabilitiesSupported array
486 property shall contain values that specify the operations that are supported for the Media Redirection
487 SAPs that exist.

488 This property can be used by the remote client to determine whether the properties of the Media
489 Redirection SAPs can be modified.

490 When the SAPCapabilitiesSupported array property contains a value of 2 (Modify SAP), then the
491 properties of instances of CIM_MediaRedirectionSAP associated with the instance of
492 CIM_RedirectionService may be modified by "ModifyInstance".

493 **7.3.4 MaxDevicesPerSAP**

494 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
495 CIM_RedirectionService, , the CIM_MediaRedirectionCapabilities.MaxDevicesPerSAP property shall
496 contain the a value specifying the maximum number of devices that are support by the Media Redirection
497 Service for a single Media Redirection SAP. This value shall not exceed the value of
498 CIM_USBRedirectionCapabilities.MaxDevicesSupported

499 **7.3.5 ConnectionModesSupported**

500 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
501 CIM_RedirectionService, the CIM_MediaRedirectionCapabilities.ConnectionModesSupported array
502 property shall contain values that specify which connection modes the service supports

503 This property can be used by the remote client to determine whether Media Redirection Service supports
504 initiating connections to a remote application for Media Redirections or waits for a remote application to
505 initiate the connection for Media Redirections.

506 When the ConnectionModesSupported array property contains a value of 2 (Listen) the Media
507 Redirection Service supports waiting for remote applications to initiate network connections for Media
508 Redirections.

509 When the ConnectionModesSupported array property contains a value of 3 (Connect) the Media
510 Redirection Service supports initiating network connections to the remote applications for Media
511 Redirections.

512 **7.3.6 InfoFormatsSupported**

513 The InfoFormatsSupported property may be supported. When the ConnectionModesSupported array
514 property contains a value of 3 (Connect) the InfoFormatsSupported shall be supported. When the
515 InfoFormatsSupported property is supported, it shall contain an enumeration of the AccessInfo formats
516 available for the Media Redirection SAP to connect to the remote service access point modeled by
517 CIM_RemoteServiceAccessPoint. (See 7.7.1.2.)

518 **7.3.7 RequestedStatesSupported**

519 If an instance of CIM_MediaRedirectionCapabilities is associated with the instance of
520 CIM_RedirectionService, the CIM_MediaRedirectionCapabilities.RequestedStatesSupported property
521 shall contain zero or more of the following values: 2 (Enabled) or 3 (Disabled). (See 7.10.1.1.)

522 **7.4 Representing a Media Redirection SAP**

523 A Media Redirection SAP shall be represented by an instance of CIM_MediaRedirectionSAP.

524 **7.4.1 Relationship to the Service**

525 The relationship between the Media Redirection SAP and a Media Redirection Service shall be modeled
526 for each instance of CIM_MediaRedirectionSAP that exists.

527 The relationship shall be modeled with an instance of CIM_ServiceAccessBySAP. When used in this way,
528 the CIM_ServiceAccessBySAP association's Antecedent property shall reference the
529 CIM_RedirectionService instance, and its Dependent property shall reference the
530 CIM_MediaRedirectionSAP instance.

531 **7.4.2 Relationship to the Computer System with the Emulated Media Devices**

532 The relationship between the Media Redirection SAP and the computer system that contains one or more
533 emulated Media Devices may be modeled.

534 The relationship shall be modeled with an instance of the CIM_SAPAvailableForElement association.
535 When used in this way, the CIM_SAPAvailableForElement association's ManagedElement property shall
536 reference the CIM_ComputerSystem instance, and its AvailableSAP property shall reference the
537 CIM_MediaRedirectionSAP instance.

538 **7.4.3 Relationship to the Computer System with the SAP**

539 The relationship between the Media Redirection SAP and the computer system that contains the endpoint
540 for the Media Redirection SAP shall be modeled with an instance of CIM_HostedAccessPoint. When
541 used in this way, the CIM_HostedAccessPoint association's Antecedent property shall reference the
542 CIM_ComputerSystem instance, and its Dependent property shall reference the
543 CIM_MediaRedirectionSAP instance.

544 **7.4.4 Relationship to the Capabilities of the SAP**

545 The state management capabilities of the Media Redirection SAP may be modeled.

546 The relationship shall be modeled with an instance of CIM_EnabledLogicalElementCapabilities.

547 When an instance of CIM_EnabledLogicalElementCapabilities exists, the relationship between the Media
548 Redirection SAP and the capabilities of that SAP shall be modeled with an instance of
549 CIM_ElementCapabilities. When used in this way, the CIM_EnabledLogicalElementCapabilities
550 association's ManagedElement property shall reference the CIM_MediaRedirectionSAP, and its
551 Capabilities property shall reference CIM_EnabledLogicalElementCapabilities.

552 **7.4.5 CIM_MediaRedirectionSAP.ElementName**

553 The CIM_MediaRedirectionSAP.ElementName property shall be formatted as a free-form string of
554 variable length (pattern ".*").

555 The ElementName property may support being modified by the ModifyInstance operation. (See 8.16.1.1.)
556 This behavior is conditional. The following sections describe the CIM elements and behavior required to
557 determine whether an implementation supports client modification of the ElementName property.

558 7.4.5.1 Modifying ElementName Is Supported – Conditional

559 This section describes the CIM elements and behavior requirements when an implementation supports
560 client modification of the CIM_MediaRedirectionSAP.ElementName property.

561 An instance of CIM_EnabledLogicalElementCapabilities shall be associated with the
562 CIM_MediaRedirectionSAP instance through an instance of the CIM_ElementCapabilities association.

563 The CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported property shall have a value of
564 TRUE.

565 The CIM_EnabledLogicalElementCapabilities.MaxElementNameLen property shall be implemented.

566 7.4.5.2 Modifying ElementName Is Not Supported

567 This section describes the CIM elements and behaviors that shall be implemented when the
568 CIM_MediaRedirectionSAP.ElementName does not support being modified by the ModifyInstance
569 operation.

570 An instance of CIM_EnabledLogicalElementCapabilities may be associated with the
571 CIM_MediaRedirectionSAP instance through an instance of CIM_ElementCapabilities.

572 When an instance of CIM_EnabledLogicalElementCapabilities that is associated with
573 CIM_MediaRedirectionSAP through an instance of CIM_ElementCapabilities exists, its
574 ElementNameEditSupported property shall have a value of FALSE.

575 When an instance of CIM_EnabledLogicalElementCapabilities that is associated with
576 CIM_MediaRedirectionSAP through an instance of CIM_ElementCapabilities exists, its
577 MaxElementNameLen property may be implemented, but the MaxElementNameLen property is irrelevant
578 in this context.

579 7.4.6 Session Connection Mode

580 Two connection modes are defined for Media Redirection SAPs.

581 The Media Redirection SAP waits (listens) for an application on a Remote System to initiate a network connection for Media
582 Redirection

- 583 • The Media Redirection SAP initiates connecting to the applications on the Remote System for
584 Media Redirection.
- 585 • The connection mode of the Media Redirection SAP shall be represented by the
586 CIM_MediaRedirectionSAP.ConnectionMode property. The property shall have a value of 2
587 (Listen) or 3 (Connect). If CIM_MediaRedirectionCapabilities is supported, the value of the
588 CIM_MediaRedirectionSAP.ConnectionMode property shall be one of the values in the
589 CIM_MediaRedirectionCapabilities.ConnectionModesSupported property.

590 7.4.7 Command Timeout

591 The Command Timeout is the amount of time that the session shall wait for a response after sending a
592 Media command. If the Command Timeout is exceeded, the emulated Media device behaves as if the
593 media were ejected; a Reset message is sent to the Remote System to terminate the previous command.

594 The CIM_MediaRedirectionSAP.CommandTimeout property shall have the value of the Command
595 Timeout.

596 7.4.8 Reset Timeout

597 The Reset Timeout is the amount of time that the session shall wait after sending a Reset to the Remote
598 System before concluding that the Remote System is not responding in a timely fashion because It may

599 be “hung” or busy. If the Reset Timeout is exceeded, the managed system closes the connection and
600 tries to establish a new connection with the Remote System.

601 The CIM_MediaRedirectionSAP.ResetTimeout shall have a value of the Reset Timeout.

602 **7.4.9 Session Timeout**

603 The Session Timeout is the amount of time the Media Redirection SAP will wait for a Remote System to
604 establish a new connection before the Media Device is disabled.

605 The CIM_MediaRedirectionSAP.SessionTimeout shall have a value of the Session Timeout.

606 **7.5 Representing the Endpoint of a Media Redirection SAP**

607 The instance of CIM_MediaRedirectionSAP may be associated through an instance of CIM_BindsTo to
608 one or more instances of CIM_ProtocolEndpoint that represents the endpoints where the redirected
609 Media Redirection SAP is accessed.

610 The CIM_BindsTo association's Antecedent property shall reference the CIM_ProtocolEndpoint instance,
611 and its Dependent property shall reference the CIM_MediaRedirectionSAP instance.

612 **7.6 Representing the Locally Emulated Media Device**

613 A locally emulated Media Device shall be represented by an instance of CIM_MediaAccessDevice or a
614 subclass of CIM_MediaAccessDevice.

615 **7.6.1 Relationship to the Media Redirection Service**

616 The relationship between a locally emulated Media Device and the Media Redirection Service shall be
617 modeled with an instance of the CIM_ServiceAffectsElement association. When used in this way, the
618 CIM_ServiceAffectsElement association's AffectingElement property shall reference the instance of
619 CIM_RedirectionService, and its AffectedElement property shall reference the instance of
620 CIM_MediaAccessDevice or subclass of CIM_MediaAccessDevice.

621 **7.6.2 Relationship to the Media Redirection SAP**

622 The relationship between a locally emulated Media Device and a Media Redirection SAP may be
623 modeled.

624 The relationship shall be modeled with an instance of the CIM_SAPAvailableForElement association.
625 When used in this way, the CIM_SAPAvailableForElement association's Antecedent property shall
626 reference an instance of CIM_MediaAccessDevice or subclass of CIM_MediaAccessDevice, and its
627 Dependent property shall reference the CIM_MediaRedirectionSAP instance.

628 **7.7 Representing the Destination of the Media Redirection**

629 The remote destination of Media Redirection may be modeled. When modeled, the requirements
630 specified in the following sections shall be met.

631 **7.7.1 CIM_RemoteServiceAccessPoint Instance**

632 The remote destination of the Media Redirection may be represented by an instance of
633 CIM_RemoteServiceAccessPoint.

634 Every instance CIM_MediaRedirectionSAP instance that has a ConnectionMode property value of 3
635 (Connect) shall be associated with exactly one instance of CIM_RemoteServiceAccessPoint through an
636 instance of the CIM_RemoteAccessAvailableToElement association.

637 If an instance of CIM_USBRedirectionCapabilities is associated with the CIM_RedirectionService
638 instance and CIM_USBRedirectionCapabilities.ConnectionModesSupported includes both 2 (Listen) and
639 3 (Connect) (see 7.3.5) and CIM_USBRedirectionCapabilities.SAPCapabilitiesSupported includes 4
640 (Modify SAP) (see 7.3.3), static pre-configured instances of CIM_USBRedirectionSAP shall have a
641 CIM_RemoteAccessAvailableToElement association to an instance of CIM_RemoteServiceAccessPoint
642 and a CIM_BindsTo association to an instance of CIM_ProtocolEndpoint.

643 7.7.1.1 AccessInfo

644 The CIM_RemoteServiceAccessPoint.AccessInfo property shall have a value that corresponds to the
645 value of the CIM_RemoteServiceAccessPoint.InfoFormat property. The value shall contain the network
646 location for the destination of the Media Redirection.

647 7.7.1.2 InfoFormat

648 The CIM_RemoteServiceAccessPoint.InfoFormat property shall contain the correct valuemap value for
649 the format of the CIM_RemoteServiceAccessPoint.AccessInfo information that designates the network
650 location for the destination of the Media Redirection. When an instance of
651 CIM_MediaRedirectionCapabilities is associated with the instance of CIM_RedirectionService and
652 CIM_MediaRedirectionCapabilities.InfoFormatsSupported is not empty, the value of the InfoFormat
653 property shall be one of the values of CIM_MediaRedirectionCapabilities.InfoFormatsSupported.

654 7.7.1.3 OtherInfoFormatDescription

655 If the value of the CIM_RemoteServiceAccessPoint.InfoFormat property is 1 (Other), the
656 CIM_RemoteServiceAccessPoint.OtherInfoFormatDescription property describes the format.

657 7.7.1.4 AccessContext

658 The CIM_RemoteServiceAccessPoint.AccessContext property shall have a value of 1 (Other).

659 7.7.1.5 OtherAccessContext

660 The CIM_RemoteServiceAccessPoint.OtherAccessContext property shall have a value of "Media
661 Redirection Destination".

662 7.8 States of a Media Redirection

663 The state of a Media Redirection shall be determined by the states of the CIM_RedirectionService and
664 CIM_MediaRedirectionSAP instances that are associated through an instance of
665 CIM_ServiceAccessBySAP.

666 The Media Redirection shall have the state *inactive*, *available*, or *active*:

- 667 • The Media Redirection is *active* when the Media Redirection SAP is connected to a Remote
668 SAP. The value of the EnabledState properties in CIM_RedirectionService and
669 CIM_MediaRedirectionSAP shall be 2 (Enabled) when the Media Redirection is in an active
670 state.
- 671 • The Media Redirection is *available* when the Media Redirection SAP is available for connection
672 at the protocol endpoint. The Media Redirection SAP is either awaiting a connection request
673 (listen mode) or ready to initiate a connection (connect mode). When the Media Redirection
674 SAP is in an available state, the value of the EnabledState property of CIM_RedirectionService
675 shall be 2 (Enabled) and the value of the EnabledState property of CIM_MediaRedirectionSAP
676 shall be 6 (Enabled but Offline).
- 677 • The Media Redirection is *inactive* when the Media Redirection is neither active nor available.

678 **7.9 State Management of a Media Redirection Service**

679 The following sections describe the CIM elements and behaviors that allow the client to determine
680 whether state management of the Media Redirection Service is supported.

681 Support for managing the state of a Media Redirection Service is optional behavior. The following
682 sections describe the CIM elements and behaviors that allow the client to determine whether state
683 management of the Media Redirection Service is supported.

684 **7.9.1 Media Redirection Service State Management Is Supported**

685 This section describes the CIM elements and behaviors that shall be implemented when state
686 management of the Media Redirection Service is supported.

687 **7.9.1.1 CIM_MediaRedirectionCapabilities**

688 When state management of the Service is supported, exactly one instance of
689 CIM_MediaRedirectionCapabilities shall be associated with the instance of CIM_RedirectionService
690 through an instance of CIM_ElementCapabilities.

691 The CIM_ElementCapabilities association's ManagedElement property shall reference the
692 CIM_RedirectionService instance, and its Capabilities property shall reference the
693 CIM_MediaRedirectionCapabilities instance.

694 **7.9.1.1.1 CIM_MediaRedirectionCapabilities.RequestedStatesSupported**

695 The RequestedStatesSupported property shall contain one or more of the following values: 2 (Enabled) or
696 3 (Disabled).

697 **7.9.1.2 CIM_RedirectionService.RequestedState**

698 When the CIM_RedirectionService.RequestStateChange() method is successfully invoked, the value of
699 the RequestedState property shall be the value of the RequestedState parameter. If the method is not
700 successfully invoked, the value of the RequestedState property is indeterminate.

701 The CIM_RedirectionService.RequestedState property shall have one of the values specified in the
702 CIM_MediaRedirectionCapabilities.RequestedStatesSupported property or a value of 0 (Unknown).

703 **7.9.1.3 CIM_RedirectionService.EnabledState**

704 The EnabledState property shall have one of the following values: 2 (Enabled) or 3 (Disabled).

705 When the RequestedState parameter has a value of 2 (Enabled) or 3 (Disabled) and the
706 CIM_RedirectionService.RequestStateChange() method completes successfully, the value of the
707 EnabledState property shall equal the value of the CIM_RedirectionService.RequestedState property.

708 If the method does not complete successfully, the value of the EnabledState property is indeterminate.

709 **7.9.2 Media Redirection Service State Management Is Not Supported**

710 This section describes the CIM elements and behaviors that shall be implemented when management of
711 the Media Redirection Service state is not supported.

712 **7.9.2.1 CIM_MediaRedirectionCapabilities**

713 When state management is not supported, an instance of CIM_MediaRedirectionCapabilities may be
714 associated with the CIM_RedirectionService instance through an instance of CIM_ElementCapabilities.
715 The existence of the CIM_ElementCapabilities instance is conditional on the existence of the
716 CIM_MediaRedirectionCapabilities instance.

717 The CIM_ElementCapabilities association's ManagedElement property shall reference the
718 CIM_RedirectionService instance, and its Dependent property shall reference the
719 CIM_MediaRedirectionCapabilities instance.

720 **7.9.2.1.1 CIM_MediaRedirectionCapabilities.RequestedStatesSupported**

721 The CIM_MediaRedirectionCapabilities.RequestedStatesSupported property shall not contain any values.

722 **7.9.2.2 CIM_RedirectionService.RequestedState**

723 The RequestedState property shall have the value of 12 (Not Applicable).

724 **7.9.2.3 CIM_RedirectionService.EnabledState**

725 The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), or 0
726 (Unknown). The EnabledState property may have a value of 5 (Not Applicable) when non-CIM
727 instrumentation has manipulated the instance of CIM_RedirectionService.

728 **7.10 State Management of a Media Redirection SAP**

729 The following sections describe the CIM elements and behaviors that allow the client to determine
730 whether state management of the Media Redirection SAP is supported.

731 Support for managing the state of a Media Redirection SAP is optional behavior. The following sections
732 describe the CIM elements and behaviors that allow the client to determine whether state management of
733 the Media Redirection SAP is supported.

734 **7.10.1 Media Redirection SAP State Management Is Supported – Conditional**

735 This section describes the CIM elements and behaviors that shall be implemented when state
736 management of the Media Redirection SAP is supported.

737 **7.10.1.1 CIM_EnabledLogicalElementCapabilities**

738 When state management of the Media Redirection SAP is supported, exactly one instance of
739 CIM_EnabledLogicalElementCapabilities shall be associated with the instance of
740 CIM_MediaRedirectionSAP through an instance of CIM_ElementCapabilities.

741 The CIM_ElementCapabilities association's ManagedElement property shall reference the
742 CIM_MediaRedirectionSAP instance, and its Capabilities property shall reference the
743 CIM_EnabledLogicalElementCapabilities instance.

744 **7.10.1.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported**

745 The RequestedStatesSupported property shall contain one or more of the following values: 2 (Enabled), 3
746 (Disabled), or 6 (Offline).

747 **7.10.1.2 CIM_MediaRedirectionSAP.RequestedState**

748 When the CIM_MediaRedirectionSAP.RequestStateChange() method is successfully invoked, the value
749 of the RequestedState property shall be the value of the RequestedState parameter. If the method is not
750 successfully invoked, the value of the RequestedState property is indeterminate.

751 The CIM_MediaRedirectionSAP.RequestedState property shall have one of the values specified in the
752 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property or a value of 0 (Unknown).

753 **7.10.1.3 CIM_MediaRedirectionSAP.EnabledState**

754 The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), or 6
755 (Enabled but Offline).

756 When the RequestedState parameter has a value of 2 (Enabled), 3 (Disabled), or 6 (Offline) and the
757 CIM_MediaRedirectionSAP.RequestStateChange() method completes successfully, the value of the
758 EnabledState property shall equal the value of the CIM_MediaRedirectionSAP.RequestedState property.

759 If the method does not complete successfully, the value of the EnabledState property is indeterminate.

760 **7.10.2 Media Redirection SAP State Management Is Not Supported**

761 This section describes the CIM elements and behaviors that shall be implemented when management of
762 the Session state is not supported.

763 **7.10.2.1 CIM_EnabledLogicalElementCapabilities**

764 When state management is not supported, an instance of CIM_EnabledLogicalElementCapabilities may
765 be associated with the CIM_MediaRedirectionSAP instance through an instance of
766 CIM_ElementCapabilities. The existence of the CIM_ElementCapabilities instance is conditional on the
767 existence of the CIM_EnabledLogicalElementCapabilities instance.

768 The CIM_ElementCapabilities association's ManagedElement property shall reference the
769 CIM_MediaRedirectionSAP instance, and its Dependent property shall reference the
770 CIM_EnabledLogicalElementCapabilities instance.

771 **7.10.2.1.1 CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported**

772 The CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property shall not contain any
773 values.

774 **7.10.2.2 CIM_MediaRedirectionSAP.RequestedState**

775 The RequestedState property shall have the value of 12 (Not Applicable).

776 **7.10.2.3 CIM_MediaRedirectionSAP.EnabledState**

777 The EnabledState property shall have one of the following values: 2 (Enabled), 3 (Disabled), 0
778 (Unknown), or 6 (Enabled but Offline). The EnabledState property may have a value of 0 (Unknown)
779 when non-CIM instrumentation has manipulated the instance of CIM_MediaRedirectionSAP.

780 **8 Methods**

781 This section details the requirements for supporting intrinsic operations and extrinsic methods for the CIM
782 elements defined by this profile.

783 **8.1 CIM_RedirectionService.RequestStateChange()**

784 Invocation of the RequestStateChange() method changes the element's state to the value specified in the
785 RequestedState parameter. The 2 (Enabled) and 3 (Disabled) values of the RequestedState parameter
786 shall correspond to the enabled and disabled states of the Media Redirection Service, respectively.

787 Whether the method completes successfully if there are active sessions is specific to the implementation.

788 Detailed requirements of the RequestStateChange() method are specified in Table 2 and Table 3.

789 No standard messages are defined.

790 Invoking the RequestStateChange() method multiple times could result in earlier requests being
791 overwritten or lost.

792 **Table 2 – CIM_RedirectionService.RequestStateChange() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported.
2	Error occurred.
4096	Job started: REF returned to started CIM_ConcreteJob.

793 **Table 3 – CIM_RedirectionService.RequestStateChange() Method: Parameters**

Qualifiers	Name	Type	Description/Values
IN	RequestedState	uint16	Valid state values: 2 (Enabled) 3 (Disabled)
OUT	Job	CIM_ConcreteJob REF	Returned if job started
IN	TimeoutPeriod	datetime	Client-specified maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed

794 **8.1.1 CIM_RedirectionService.RequestStateChange() – Conditional Support**

795 When an instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
796 instance and the CIM_MediaRedirectionCapabilities.RequestedStatesSupported property contains at
797 least one value, the CIM_RedirectionService.RequestStateChange() method shall be implemented and
798 supported. The CIM_RedirectionService.RequestStateChange() method shall not return a value of 1 (Not
799 Supported).

800 **8.2 CIM_MediaRedirectionSAP.RequestStateChange()**

801 Invocation of the RequestStateChange() method changes the element's state to the value specified in the
802 RequestedState parameter. The 2 (Enabled), 3 (Disabled), and 6 (Offline) values of the RequestedState
803 parameter shall correspond to enabled, disabled, and offline requested states for the SAP, respectively.

804 Detailed requirements of the RequestStateChange() method are specified in Table 4 and Table 5.

805 No standard messages are defined.

806 Invoking the RequestStateChange() method multiple times could result in earlier requests being
807 overwritten or lost.

808 **Table 4 – CIM_MediaRedirectionSAP.RequestStateChange() Method: Return Code Values**

Value	Description
0	Request was successfully executed.
1	Method is unsupported.

Value	Description
2	Error occurred.
4096	Job started: REF returned to started CIM_ConcreteJob.

809

Table 5 – CIM_MediaRedirectionSAP.RequestStateChange() Method: Parameters

Qualifiers	Name	Type	Description/Values
IN	RequestedState	uint16	Valid state values: 2 (Enabled) 3 (Disabled) 6 (Offline)
IN	TimeoutPeriod	datetime	Client-specified maximum amount of time the transition to a new state is supposed to take: 0 or NULL – No time requirements <interval> – Maximum time allowed
OUT	Job	CIM_ConcreteJob REF	Returned if job started

810

8.2.1 CIM_MediaRedirectionSAP.RequestStateChange() – Conditional Support

811
812
813
814
815
816

When an instance of CIM_EnabledLogicalElementCapabilities is associated with the CIM_MediaRedirectionSAP instance and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported property contains at least one value, the CIM_MediaRedirectionSAP.RequestStateChange() method shall be implemented and supported. The CIM_MediaRedirectionSAP.RequestStateChange() method shall not return a value of 1 (Not Supported).

817

8.3 Profile Conventions for Operations

818
819
820
821
822

Support for operations for each profile class (including associations) is specified in the following subclauses. Each subclause includes either the statement "All operations in the default list in 8.3 are supported as described by [DSP0200](#) version 1.2" or a table listing all of the operations that are not supported by this profile or where the profile requires behavior other than that described by [DSP0200](#) version 1.2.

823

The default list of operations is as follows:

824
825
826
827
828
829
830

- GetInstance
- Associators
- AssociatorNames
- References
- ReferenceNames
- EnumerateInstances
- EnumerateInstanceNames

831
832

A compliant implementation shall support all of the operations in the default list for each class, unless the "Requirement" column states something other than *Mandatory*.

833 **8.4 CIM_BindsTo**

834 Table 6 lists operations that either have special requirements beyond those from [DSP0200](#) version 1.2 or
835 shall not be supported.

836 **Table 6 – Operations: CIM_BindsTo**

861 8.10.1 CIM_RemoteServiceAccessPoint – ModifyInstance

862 This section details the specific requirements for the ModifyInstance operation applied to an instance of
863 CIM_RemoteServiceAccessPoint.

864 8.10.1.1 CIM_RemoteServiceAccessPoint.InfoFormat Property

865 When an instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
866 instance and the CIM_MediaRedirectionCapabilities.InfoFormatsSupported is not empty, the
867 implementation shall allow the ModifyInstance operation to change the value of the InfoFormat property of
868 the CIM_RemoteServiceAccessPoint instance. The new InfoFormat value shall be one of the values in
869 CIM_MediaRedirectionCapabilities.InfoFormatsSupported.

870 8.10.1.2 CIM_RemoteServiceAccessPoint.AccessInfo Property

871 When an instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
872 instance and the CIM_MediaRedirectionCapabilities.InfoFormatsSupported is not empty, the
873 implementation shall allow the ModifyInstance operation to change the value of the AccessInfo property
874 of the CIM_RemoteServiceAccessPoint instance.

875 8.10.1.3 CIM_RemoteServiceAccessPoint.OtherInfoFormatDescription Property

876 When an instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
877 instance and the CIM_MediaRedirectionCapabilities.InfoFormatsSupported property has a value of 1
878 (Other), the implementation shall allow the ModifyInstance operation to change the value of the
879 OtherInfoFormatDescription property of the CIM_RemoteServiceAccessPoint instance.

880 8.11 CIM_SAPAvailableForElement

881 Table 13 lists operations that either have special requirements beyond those from [DSP0200](#) version 1.2
882 or shall not be supported.

904 8.16.1 CIM_MediaRedirectionSAP – ModifyInstance

905 This section details the specific requirements for the ModifyInstance operation applied to an instance of
906 CIM_MediaRedirectionSAP.

907 8.16.1.1 CIM_MediaRedirectionSAP.ElementName Property

908 When an instance of CIM_EnabledLogicalElementCapabilities is associated with the
909 CIM_MediaRedirectionSAP instance and the
910 CIM_EnabledLogicalElementCapabilities.ElementNameEditSupported property has a value of TRUE, the
911 implementation shall allow the ModifyInstance operation to change the value of the ElementName
912 property of the CIM_MediaRedirectionSAP instance. The ModifyInstance operation shall enforce the
913 length restriction specified in the MaxElementNameLen property of the
914 CIM_EnabledLogicalElementCapabilities instance.

915 When no instance of CIM_EnabledLogicalElementCapabilities is associated with the
916 CIM_MediaRedirectionSAP instance, or the ElementNameEditSupported property of the
917 CIM_EnabledLogicalElementCapabilities instance has a value of FALSE, the implementation shall not
918 allow the ModifyInstance operation to change the value of the ElementName property of the
919 CIM_MediaRedirectionSAP instance.

920 8.16.1.2 Modifying CIM_MediaRedirectionSAP Properties

921 When an instance of CIM_MediaRedirection.Capabilities is associated with the CIM_RedirectionService
922 instance and the CIM_MediaRedirectionCapabilities.SAPCapabilitiesSupported property has a value of 2
923 (Modify SAP), the implementation shall allow the ModifyInstance operation to change the value of the
924 properties of the CIM_MediaRedirectionSAP instance.

925 When no instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
 926 instance, or the SAPCapabilitiesSupported property of the CIM_MediaRedirectionCapabilities instance
 927 does not have a value of 2 (Modify SAP), the implementation shall not allow the ModifyInstance operation
 928 to change the value of the properties of the CIM_MediaRedirectionSAP instance.

929 **8.17 CIM_RedirectionService**

930 Table 19 lists operations that either have special requirements beyond those from [DSP0200](#) version 1.2
 931 or shall not be supported.

932 **Table 19 – Operations: CIM_RedirectionService**

Operation	Requirement	Messages
ModifyInstance	Optional	See 8.17.1.
Associators	Unspecified	None
AssociatorNames	Unspecified	None
References	Unspecified	None
ReferenceNames	Unspecified	None

933 **8.17.1 CIM_RedirectionService – ModifyInstance**

934 This section details the specific requirements for the ModifyInstance operation applied to an instance of
 935 CIM_RedirectionService.

936 **8.17.1.1 CIM_RedirectionService.ElementName Property**

937 When an instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
 938 instance and the CIM_MediaRedirectionCapabilities.ElementNameEditSupported property has a value of
 939 TRUE, the implementation shall allow the ModifyInstance operation to change the value of the
 940 ElementName property of the CIM_RedirectionService instance. The ModifyInstance operation shall
 941 enforce the length restriction specified in the MaxElementNameLen property of the
 942 CIM_MediaRedirectionCapabilities instance.

943 When no instance of CIM_MediaRedirectionCapabilities is associated with the CIM_RedirectionService
 944 instance or the ElementNameEditSupported property of the CIM_MediaRedirectionCapabilities instance
 945 has a value of FALSE, the implementation shall not allow the ModifyInstance operation to change the
 946 value of the ElementName property of the CIM_RedirectionService instance.

947 **9 Use Cases**

948 This section contains object diagrams and use cases specific to the *Media Redirection Profile*. The use
 949 cases are informative and are not intended to define the requirements for conformance.

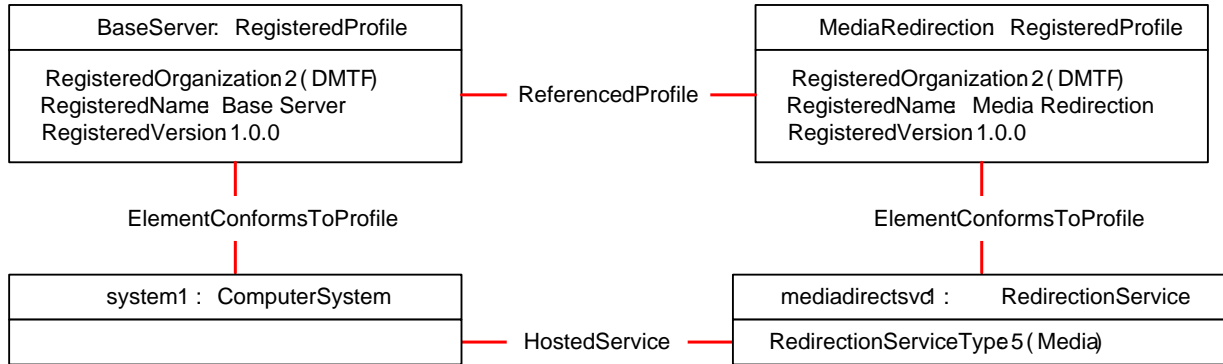

950 **9.1 Advertising the Profile Conformance**

951 Figure 2 shows how instances of CIM_RegisteredProfile are used to identify the version of the *Media*
 952 *Redirection Profile* with which an instance of CIM_RedirectionService and its associated instances
 953 conform.

954 An instance of CIM_RegisteredProfile exists for each profile that is instrumented in the system. One
 955 instance of CIM_RegisteredProfile identifies the DMTF [Base Server Profile](#), version 1.0.0. The other
 956 instance identifies the *Media Redirection Profile*, version 1.0.0. The Central Instance is the
 957 CIM_RedirectionService. The Scoping Instance is the CIM_ComputerSystem instance.

958 This instance of CIM_ComputerSystem conforms to the [Base Server Profile](#), version 1.0.0, as indicated
 959 by the CIM_ElementConformsToProfile association with the CIM_RegisteredProfile instance.

960 This instance of CIM_RedirectionService conforms to the *Media Redirection Profile*, version 1.0.0, as
 961 indicated by the CIM_ElementConformsToProfile association with the CIM_RegisteredProfile instance.

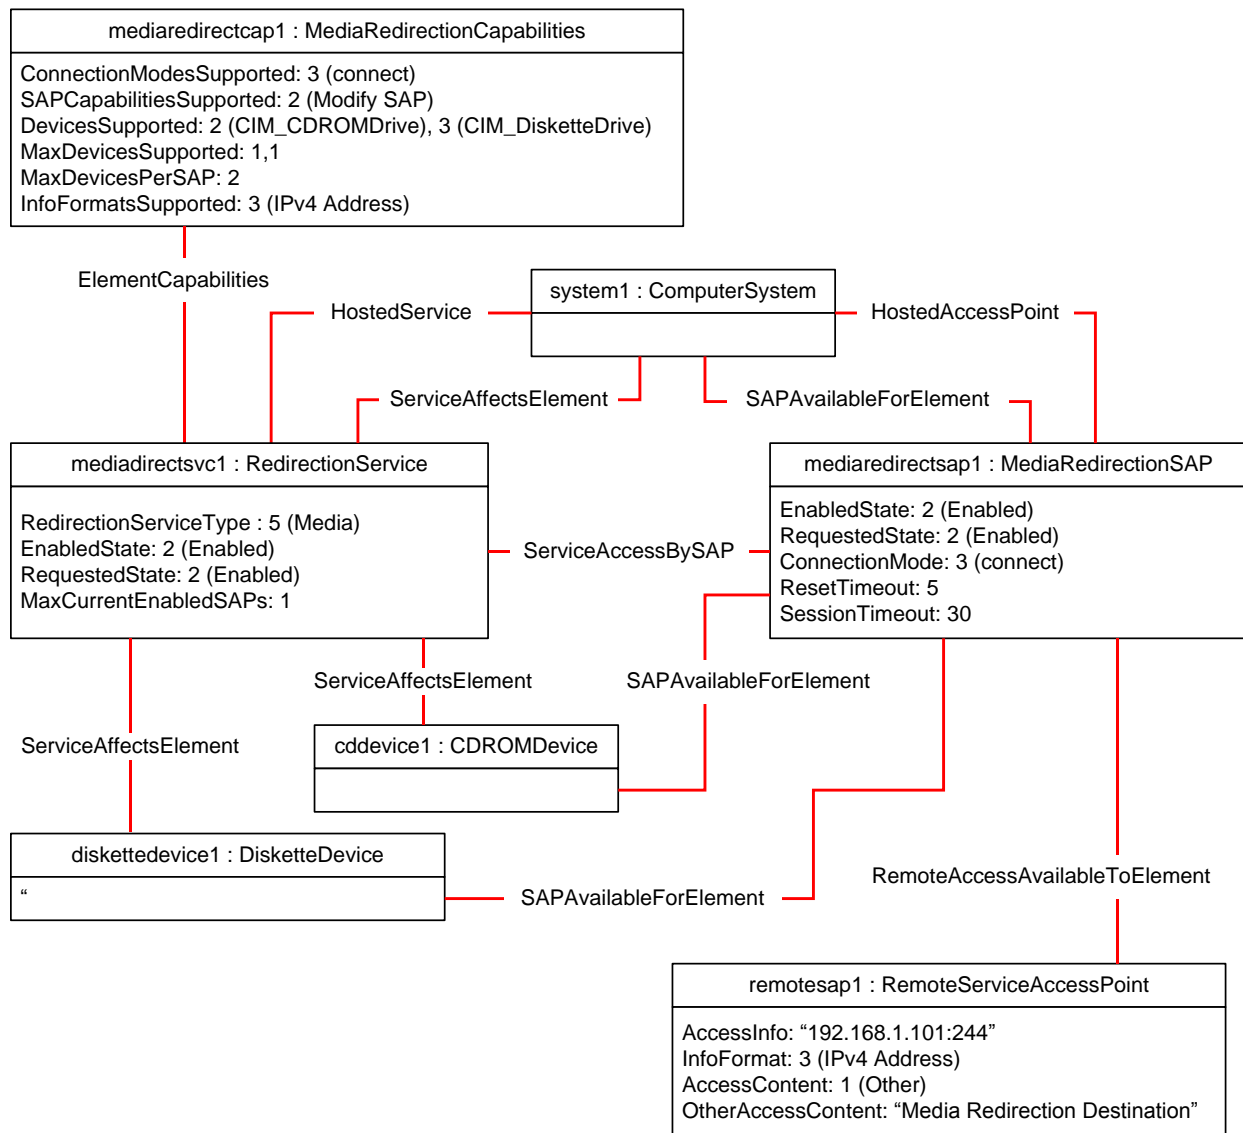

962

963

Figure 2 – Registered Profile

964 **9.2 Object Diagram for a Monolithic Server – Connect**

965 Figure 3 shows a monolithic server, system1, configured for the Media Redirection SAP to connect to the
 966 Remote System for Redirection.

967

968

Figure 3 – Monolithic System: Connect

969 The Media Redirection Service is represented by mediaredirectsvc1. The Media Redirection SAP is
 970 represented by mediaredirectsap1.

971 The instance of CIM_MediaRedirectionCapabilities, mediaredirectcap1, describes the capabilities of the
 972 Media Redirection Service. The SAPCapabilitiesSupported property value of 2 (Modify SAP) models that
 973 the SAP properties can be modified.

974 The ConnectionModesSupported property models that the SAP can only be configured for “connect”
 975 mode. The DeviceSupported property models that the Emulated CDROM and Diskette devices may be
 976 redirected. The InfoFormatsSupported property models that the SAP can support IPv4 Addresses to
 977 initiate the redirected session connection to the remote SAP.

978 The CIM_ServiceAccessBySAP association between mediaredirectsvc1 and mediaredirectsap1 models
 979 that mediaredirectsvc1 is available at mediaredirectsap1. The MediaRedirectionSAP.ConnectionMode
 980 property is set to "connect" which models that the SAP will initiate a session to a remote SAP. The

981 instance of CIM_RemoteServiceAccessPoint, remotesap1, has been configured with access information
 982 needed to initiate a session with the remote SAP.

983 The CIM_HostedService association between system1 and mediaredirectsvc1 models that the Media
 984 Redirection Service is hosted on system1.

985 The CIM_ServiceAffectsElement association between mediaredirectsvc1 and cddevice1 and
 986 diskettedevice1 models that the Media Redirection Service is configured to redirect both CD and Diskette
 987 redirection data streams.

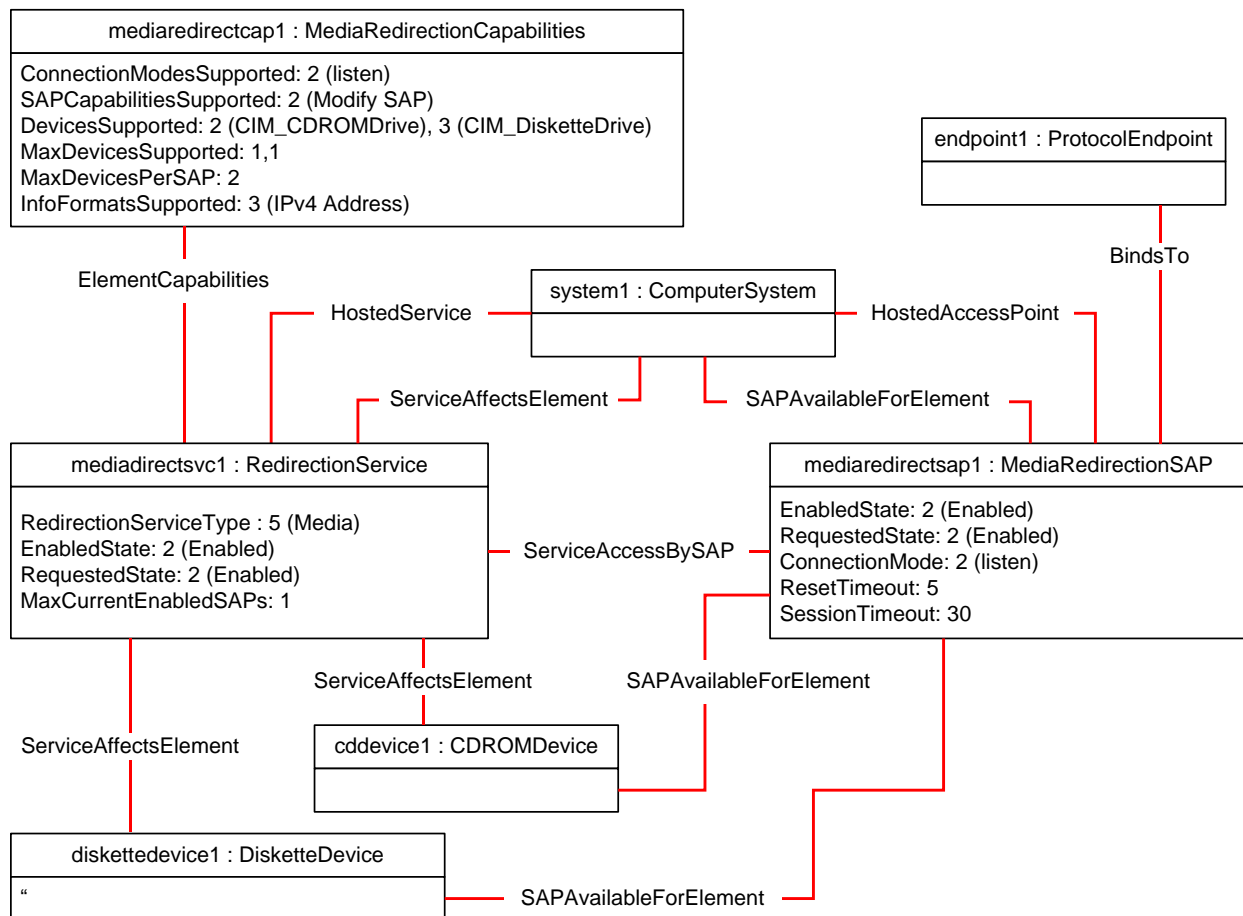

988 The CIM_HostedAccessPoint association between mediaredirectsap1 and system1 models that
 989 mediaredirectsap1 is hosted on system1.

990 The CIM_SAPAvailableForElement association between system1 and mediaredirectsap1 models that
 991 mediaredirectsap1 provides a SAP for at least one Media device residing on system1.

992 The Media Redirection is active because the state of the mediaredirectsvc1 is 2 (Enabled) and the state
 993 of the mediaredirectsap1 is 2 (Enabled).

994 **9.3 Object Diagram for a Monolithic Server – Listen**

995 Figure 4 shows a monolithic server, system1, configured for the Media Redirection SAP to listen for a
 996 connection request from the Remote System for Redirection.

997

998

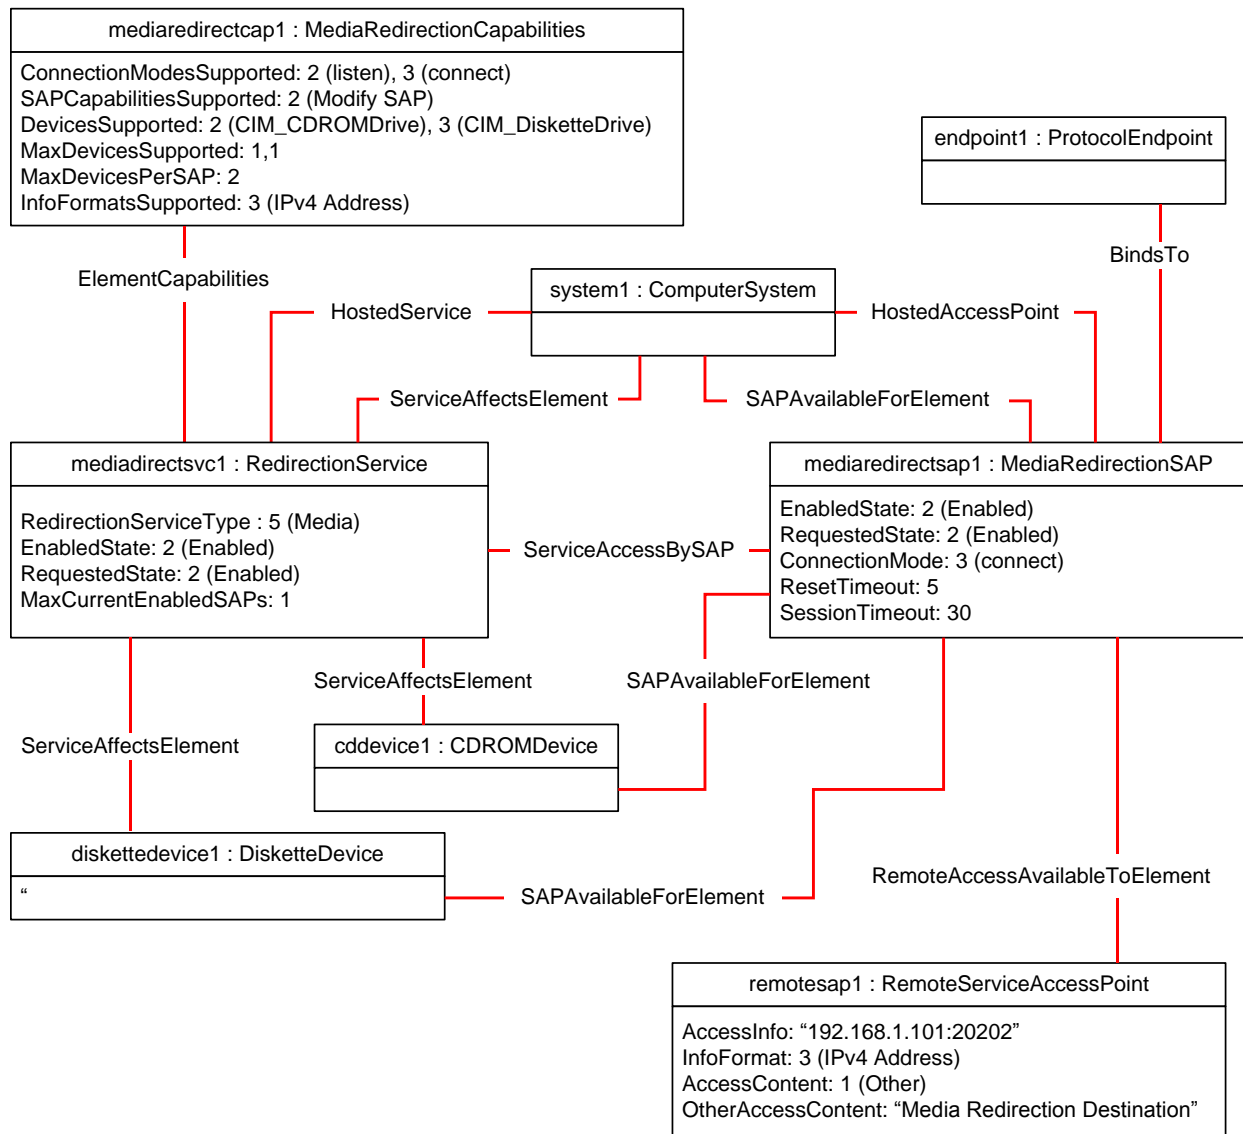

Figure 4 – Monolithic System: Listen

999 The model shown is similar to that in clause 9.2 with the exceptions noted in the next paragraph.

1000 The ConnectionModesSupported property of the instance of CIM_MediaRedirectionCapabilities shows
 1001 that the Media Redirection Service only supports the ‘listen” mode for its SAPs. The
 1002 CIM_ServiceAccessBySAP association between mediaredirectsvc1 and mediaredirectsap1 models that
 1003 the mediaredirectsvc1 is available at mediaredirectsap1. The ConnectionMode property of
 1004 CIM_MediaRedirectionSAP is set to "listen," which models that the SAP will wait for the Remote System
 1005 to initiate a session. The instance of CIM_ProtocolEndpoint, Endpoint1, contains the information the
 1006 Remote System needs to initiate a session with the local Media Redirection SAP.

1007 **9.4 Object Diagram for a Monolithic Server – Listen or Connect Mode**

1008 Figure 5 shows a monolithic server, system1, with a Media Redirection SAP for a redirected media
 1009 storage device.

1010

1011

Figure 5 – Monolithic System: Listen or Connect

1012 The model shown is similar to the model description in 9.2 with the exceptions noted in the remainder of
 1013 this section.

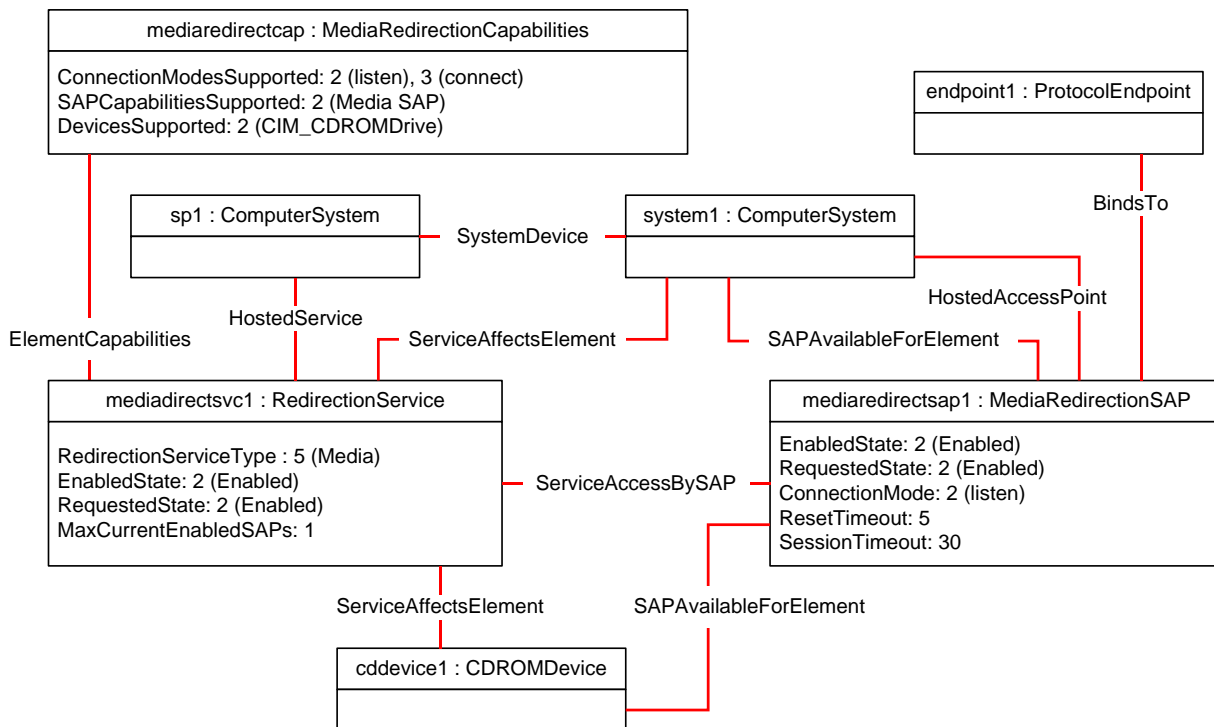

1014 The ConnectionModesSupported property of the instance of CIM_MediaRedirectionCapabilities shows
 1015 that the Media Redirection Service supports both the "listen" and "connect" mode for its SAPs. The
 1016 SAPCapabilitiesSupported property of CIM_MediaRedirectionCapabilities shows that the properties of the
 1017 SAP may be modified. Examples of modifications include a change in the timeout properties or a
 1018 reconfiguration of the SAP from "listen" to "connect" mode.

1019 The CIM_ServiceAccessBySAP association between mediaredirectsvc1 and mediaredirectsap1 models
 1020 that the mediaredirectsvc1 is available at mediaredirectsap1. Because the SAP may be configured to be
 1021 in either "listen" or "connect" mode, it has both an instance of CIM_ProtocolEndpoint associated to it by
 1022 CIM_BindsTo, and an instance of CIM_RemoteServiceAccessPoint associated to it by
 1023 CIM_RemoteAccessAvailableToElement.

1024 The ConnectionMode property of CIM_MediaRedirectionSAP has been set to "connect", so the instance of
 1025 CIM_RemoteServiceAccessPoint, remotesap1, has been configured with information about how to
 1026 access the remote SAP.

1027 **9.5 Object Diagram for a Monolithic Server with Service Processor**

1028 Figure 6 shows a monolithic server with a service processor. The diagram is similar to Figure 4, but
 1029 Figure 6 contains an instance of CIM_ComputerSystem, sp1, that represents the service processor.

1030

1031

Figure 6 – Monolithic System with Service Processor

1032 9.6 Determine whether a System Supports Media Redirection

1033 A client can determine whether a computer system of interest supports Media Redirection as follows:

- 1034 1) Start at the instance of CIM_ComputerSystem that represents the computer system of interest
- 1035 2) Enumerate the instances of CIM_RedirectionService that are associated to the instance of
1036 CIM_ComputerSystem through an instance of the CIM_ServiceAffectsElement association.
- 1037 3) If such an instance of CIM_RedirectionService is not found, the computer system does not
1038 support Media Redirection. Otherwise, the computer system does support Media Redirection.

1039 9.7 Identify Emulated Media Devices that Are Available through a Media 1040 Redirection SAP

1041 A client can determine the Media Redirection Media devices managed by a Service as follows:

- 1042 1) Start at the instance of CIM_RedirectionService of interest. (The instance can be found using
1043 the use case in 9.6.)
- 1044 2) Enumerate the instances of CIM_MediaRedirectionSAP that are associated through an instance
1045 of CIM_ServiceAccessBySAP.
- 1046 3) For each instance of CIM_MediaRedirectionSAP, enumerate the instances associated to the
1047 CIM_MediaRedirectionSAP through an instance of CIM_SAPAvailableForElement.
- 1048 4) Each instance found by the enumeration represents a locally emulated Media device that is
1049 available through a SAP.

1050 9.8 Determine How the Media Redirection State Is Managed

1051 A client can determine whether a Media Redirection is managed through the state of the SAP only or
1052 through the states of both the Service and SAP, as follows:

- 1053 1) Start at the instance of CIM_RedirectionService of interest using the use case describe in 9.6.
- 1054 2) Select the CIM_MediaRedirectionSAP that represents the Media Redirection SAP of interest
1055 using the use case described in 9.7.
- 1056 3) From the instance of CIM_RedirectionService, find the instance of
1057 CIM_MediaRedirectionCapabilities that is associated through an instance of
1058 CIM_ElementCapabilities.

1059 If an instance of CIM_MediaRedirectionCapabilities is not found, the Media Redirection cannot
1060 be managed through the state of the Media Redirection Service.

- 1061 4) For the CIM_MediaRedirectionCapabilities instance so found, obtain the values of the
1062 RequestedStatesSupported property.
- 1063 5) From the instance of CIM_MediaRedirectionSAP, find the
1064 CIM_EnabledLogicalElementCapabilities that is associated through an instance of
1065 CIM_ElementCapabilities.

1066 If an instance of CIM_EnabledLogicalElementCapabilities is not found, the Media Redirection
1067 cannot be managed through the state of the Media Redirection SAP.

- 1068 6) For the CIM_EnabledLogicalElementCapabilities so found, obtain the values of the
1069 RequestedStatesSupported property.

- 1070 7) If the CIM_MediaRedirectionCapabilities.RequestedStatesSupported property contains no
1071 values and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported contains
1072 no values, then no state management of the Media Redirection is possible.
- 1073 If the CIM_MediaRedirectionCapabilities.RequestedStatesSupported property contains no
1074 values and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported contains
1075 values, then state management of the Media Redirection is performed through state
1076 management of the SAP only.
- 1077 If the CIM_MediaRedirectionCapabilities.RequestedStatesSupported property contains values
1078 and the CIM_EnabledLogicalElementCapabilities.RequestedStatesSupported contains values,
1079 then state management of the Media Redirection is possible through state management of both
1080 the Service and the SAP.

1081 **9.9 Activate a Media Redirection – SAP State Management**

1082 When the Media Redirection is managed through the state of the Media Redirection SAP only, a client
1083 can start a Media Redirection as follows:

- 1084 1) Start at the instance of the CIM_MediaRedirectionSAP that is a component of the Media
1085 Redirection SAP of interest.
- 1086 2) Invoke the RequestStateChange() method with the RequestedState parameter set to 2
1087 (Enabled).
- 1088 3) Verify that the CIM_MediaRedirectionSAP.EnabledState property has a value of 2 (Enabled).
1089 The Media Redirection is now active.

1090 **9.10 Activate a Media Redirection – Service and SAP State Management**

1091 When the Media Redirection is managed through the states of both the Media Redirection Service and
1092 Media Redirection SAP, a client can start a Media Redirection as follows:

- 1093 1) Start at the CIM_RedirectionService instance of interest.
- 1094 2) Invoke the RequestStateChange() method with the RequestedState parameter has a value of 2
1095 (Enabled).
- 1096 3) Verify that the CIM_RedirectionService.EnabledState property has a value of 2 (Enabled).
- 1097 4) Invoke the CIM_MediaRedirectionSAP.RequestStateChange() method with the
1098 RequestedState parameter has a value of 2 (Enabled).
- 1099 5) Verify that the CIM_MediaRedirectionSAP.EnabledState property has a value of 2 (Enabled).
1100 The Media Redirection is now active.

1101 **9.11 Stop All Media Redirections Associated with the Service – SAP State 1102 Management**

1103 In the following use case, it is assumed that the client knows the instance of CIM_RedirectionService of
1104 interest.

1105 When the Media Redirection is managed through the state of the Media Redirection SAP only, a client
1106 can stop all Media Redirections as follows:

- 1107 1) Start at the instance of the CIM_RedirectionService that represents the Media Redirection
1108 Service of interest.
- 1109 2) Enumerate the instances of CIM_MediaRedirectionSAP that are associated with the instance of
1110 CIM_RedirectionService through an instance of CIM_ServiceAccessBySAP.

- 1111 3) For each instance of CIM_MediaRedirectionSAP found, query the value of the EnabledState
1112 property.
- 1113 4) If the state of each CIM_MediaRedirectionSAP is 2 (Enabled), invoke the
1114 RequestStateChange() method with each RequestedState parameter set to 6 (Offline).
- 1115 5) Verify that each CIM_MediaRedirectionSAP.EnabledState property has a value of 6 (Enabled
1116 but Offline).
- 1117 All Media Redirections associated with the CIM_RedirectionService instance are now inactive.

1118 9.12 Stop All Media Redirections Associated with a Service – Service and SAP 1119 State Management

1120 When the Media Redirection is managed through the states of both the Media Redirection Service and
1121 Media Redirection SAP, a client can stop all Media Redirections associated with the Media Redirection
1122 Service as follows:

- 1123 1) Start at the instance of the CIM_RedirectionService that represents the Media Redirection
1124 Service of interest.
- 1125 2) Change the state of the CIM_RedirectionService instance by invoking the
1126 RequestStateChange() method with the RequestedState parameter set to 3 (Disabled).
- 1127 All Media Redirections associated with the CIM_RedirectionService instance are now inactive.

1128 9.13 Find the Number of Active Media Redirection SAPs for a Service

1129 A client can find the number of active Media Redirection SAPs for a Media Redirection Service of interest
1130 as follows:

- 1131 1) Start at the CIM_RedirectionService instance of interest.
- 1132 2) Query the value of the EnabledState property.
- 1133 If the EnabledState property is 3 (Disabled), the number of active Redirection SAPs is zero.
- 1134 3) If the EnabledState property is 2 (Enabled), find all instances of CIM_MediaRedirectionSAP that
1135 are associated with the CIM_RedirectionService through an instance of
1136 CIM_ServiceAccessBySAP.
- 1137 4) For each found CIM_MediaRedirectionSAP instance, query the value of the EnabledState
1138 property.
- 1139 5) Count all the CIM_MediaRedirectionSAP.EnabledState properties whose value is 2 (Enabled).

1140 9.14 Determine whether CIM_RedirectionService.ElementName Can Be Modified

1141 A client can determine whether the ElementName property can be modified as follows:

- 1142 1) Start at the instance of CIM_RedirectionService.
- 1143 2) Find the CIM_MediaRedirectionCapabilities instance with which it is associated by traversing
1144 the CIM_ElementCapabilities association.
- 1145 3) Query the value of the ElementNameEditSupported property of the
1146 CIM_MediaRedirectionCapabilities instance.

1147 If the value is TRUE, the CIM_RedirectionService.ElementName property can be modified by a
1148 client. If no instance of CIM_MediaRedirectionCapabilities is associated with the
1149 CIM_RedirectionService instance, modifying the CIM_RedirectionService.ElementName
1150 property is not supported.

1151 **10 CIM Elements**

1152 Table 20 shows the instances of CIM elements for this profile. Instances of the CIM elements shall be
 1153 implemented as described in Table 20. Sections 7 ("Implementation") and 8 ("Methods") may impose
 1154 additional requirements on these elements.

1155 **Table 20 – CIM Elements: Media Redirection Profile**

Element Name	Requirement	Description
CIM_RegisteredProfile	Mandatory	See 10.1.
CIM_BindsTo	Conditional	See 10.2.
CIM_ElementCapabilities	Conditional	Referencing CIM_RedirectionService. See 10.3.
CIM_ElementCapabilities	Conditional	Referencing CIM_MediaRedirectionSAP. See 10.4.
CIM_EnabledLogicalElementCapabilities	Optional	See 10.5.
CIM_HostedAccessPoint	Mandatory	See 10.6.
CIM_HostedService	Mandatory	See 10.7.
CIM_RemoteAccessAvailableToElement	Conditional	See 10.8.
CIM_RemoteServiceAccessPoint	Conditional	Conditional on the session ConnectionMode. See 7.7.1 and 10.9.
CIM_SAPAvailableForElement	Mandatory	Referencing CIM_ComputerSystem. See 10.10.
CIM_SAPAvailableForElement	Optional	Referencing CIM_MediaAccessDevice. See 10.11.
CIM_ServiceAccessBySAP	Mandatory	See 10.12.
CIM_ServiceAffectsElement	Mandatory	Referencing CIM_ComputerSystem. See 10.13.
CIM_ServiceAffectsElement	Optional	Referencing CIM_MediaAccessDevice. See 10.14.
CIM_MediaAccessDevice	Mandatory	See 10.15.
CIM_MediaRedirectionCapabilities	Optional	See 10.16.
CIM_MediaRedirectionSAP	Mandatory	See 10.17.
CIM_RedirectionService	Mandatory	See 10.18.

1156 **10.1 CIM_RegisteredProfile**

1157 CIM_RegisteredProfile identifies the *Media Redirection Profile* in order for a client to determine whether
 1158 an instance of CIM_ComputerSystem conforms to this profile. The CIM_RegisteredProfile class is defined
 1159 by the [Profile Registration Profile](#). With the exception of the mandatory values specified for the properties
 1160 in Table 21, the behavior of the CIM_RegisteredProfile instance is in accordance with the [Profile](#)
 1161 [Registration Profile](#).

1162

Table 21 – Class: CIM_RegisteredProfile

Elements	Requirement	Notes
RegisteredName	Mandatory	This property shall have a value of "Media Redirection".
RegisteredVersion	Mandatory	This property shall have a value of "1.0.0".
RegisteredOrganization	Mandatory	This property shall have a value of 2 (DMTF).

1163

10.2 CIM_BindsTo

1164
1165
1166

The CIM_BindsTo association is used to relate the CIM_MediaRedirectionSAP instance to the CIM_ProtocolEndpoint instance that represents the endpoint where the Media Redirection SAP is available. Table 22 contains the requirements for elements of this class.

1167

Table 22 – Class: CIM_BindsTo

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of the CIM_ProtocolEndpoint class. See 7.5. Cardinality is "0..1".
Dependent	Mandatory	This property shall be a reference to an instance of the CIM_MediaRedirectionSAP class. See clause 7.5. Cardinality is "1..*".

1168
1169

10.3 CIM_ElementCapabilities Relating CIM_RedirectionService to CIM_MediaRedirectionCapabilities

1170
1171
1172

The CIM_ElementCapabilities association is used to relate an instance of CIM_MediaRedirectionCapabilities to an instance of CIM_RedirectionService. Table 23 contains the requirements for elements of this class.

1173

Table 23 – Class: CIM_ElementCapabilities Referencing CIM_RedirectionService

Elements	Requirement	Notes
ManagedElement	Mandatory	This property shall be a reference to an instance of CIM_RedirectionService class. See 7.2.3. Cardinality is "1..*".
Capabilities	Mandatory	This property shall be a reference to an instance of CIM_MediaRedirectionCapabilities class. See 7.2.3. Cardinality is "0..1".

1174 **10.4 CIM_ElementCapabilities Relating CIM_MediaRedirectionSAP to**
 1175 **CIM_EnabledLogicalElementCapabilities**

1176 The CIM_ElementCapabilities association is used to relate an instance of
 1177 CIM_EnabledLogicalElementCapabilities to an instance of CIM_MediaRedirectionSAP. Table 24 contains
 1178 the requirements for elements of this class.

1179 **Table 24 – Class: CIM_ElementCapabilities Referencing CIM_MediaRedirectionSAP**

Elements	Requirement	Notes
ManagedElement	Mandatory	This property shall be a reference to an instance of CIM_MediaRedirectionSAP class. See 7.4.4. Cardinality is "1..*".
Capabilities	Mandatory	This property shall be a reference to an instance of CIM_EnabledLogicalElementCapabilities class. See 7.4.4. Cardinality is "0..1".

1180 **10.5 CIM_EnabledLogicalElementCapabilities**

1181 CIM_EnabledLogicalElementCapabilities represents the capabilities of the Media Redirection SAP. Table
 1182 25 contains the requirements for elements of this class.

1183 **Table 25 – Class: CIM_EnabledLogicalElementCapabilities**

Elements	Requirement	Notes
InstanceID	Mandatory	Key
RequestedStatesSupported	Mandatory	See 7.10.1.
ElementNameEditSupported	Mandatory	See 7.4.5.
MaxElementNameLen	Conditional	See 7.4.5. Conditional on ElementNameEditSupported

1184 **10.6 CIM_HostedAccessPoint**

1185 The CIM_HostedAccessPoint association is used to relate the CIM_MediaRedirectionSAP instance to the
 1186 CIM_ComputerSystem instance to which the Media is redirected. Table 26 contains the requirements for
 1187 elements of this class.

1188 **Table 26 – Class: CIM_HostedAccessPoint**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of the CIM_ComputerSystem class. See 7.4.3. Cardinality is "1".
Dependent	Mandatory	This property shall be a reference to an instance of the CIM_MediaRedirectionSAP class. See 7.4.3. Cardinality is "*".

1189 **10.7 CIM_HostedService**

1190 The CIM_HostedService association is used to relate the CIM_RedirectionService instance to the
 1191 CIM_ComputerSystem instance on which it is hosted. Table 27 contains the requirements for elements of
 1192 this class.

1193 **Table 27 – Class: CIM_HostedService**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of the CIM_ComputerSystem class. See 7.2.1. Cardinality is "1".
Dependent	Mandatory	This property shall be a reference to an instance of the CIM_RedirectionService class. See 7.2.1. Cardinality is "**".

1194 **10.8 CIM_RemoteAccessAvailableToElement**

1195 The CIM_RemoteAccessAvailableToElement association is used to relate the instance of
 1196 CIM_MediaRedirectionSAP to the instance of CIM_RemoteServiceAccessPoint. Table 28 contains the
 1197 requirements for elements of this class.

1198 **Table 28 – Class: CIM_RemoteAccessAvailableToElement**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of the CIM_RemoteServiceAccessPoint class. See 7.7.1. Cardinality is "**".
Dependent	Mandatory	This property shall be a reference to an instance of the CIM_MediaRedirectionSAP class. See 7.7.1. Cardinality is "1".

1199 **10.9 CIM_RemoteServiceAccessPoint**

1200 The CIM_RemoteServiceAccessPoint class represents the SAP on the remote system. Table 29 contains
 1201 the requirements for elements of this class.

1202 **Table 29 – Class: CIM_RemoteServiceAccessPoint**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	Key
SystemName	Mandatory	Key
Name	Mandatory	Key
CreationClassName	Mandatory	Key
AccessContext	Mandatory	The property shall match the value 1 (Other).
AccessInfo	Mandatory	See 7.7.1.1.

Elements	Requirement	Notes
InfoFormat	Mandatory	See 7.7.1.2.
OtherAccessContext	Mandatory	The property shall match the value "Media Redirection Destination".
OtherInfoFormatDescription	Conditional	Conditional on InfoFormat value See 7.7.1.3.

1203 **10.10 CIM_SAPAvailableForElement Relating CIM_MediaRedirectionSAP to**
 1204 **CIM_ComputerSystem**

1205 The CIM_SAPAvailableForElement association is used to relate the instance of CIM_ComputerSystem on
 1206 which the Emulated Media Devices reside to the instances of CIM_MediaRedirectionSAP that are
 1207 available as access points for the redirected Media Devices. Table 30 contains the requirements for
 1208 elements of this class.

1209 **Table 30 – Class: CIM_SAPAvailableForElement Referencing CIM_ComputerSystem**

Elements	Requirement	Notes
AvailableSAP	Mandatory	This property shall be a reference to an instance of the CIM_MediaRedirectionSAP class. See 7.4.2. Cardinality is "*".
ManagedElement	Mandatory	This property shall be a reference to an instance of the CIM_ComputerSystem class. See 7.4.2. Cardinality is "1".

1210 **10.11 CIM_SAPAvailableForElement Relating CIM_MediaRedirectionSAP to**
 1211 **CIM_MediaAccessDevice**

1212 The CIM_SAPAvailableForElement association is used to relate the instance of
 1213 CIM_MediaRedirectionSAP to the instance of CIM_MediaAccessDevice or a subclass of
 1214 CIM_MediaAccessDevice that represents the Emulated Media Device that is accessible through the
 1215 Media Redirection SAP. Table 31 contains the requirements for elements of this class.

1216 **Table 31 – Class: CIM_SAPAvailableForElement Referencing CIM_MediaAccessDevice**

Elements	Requirement	Notes
AvailableSAP	Mandatory	This property shall be a reference to an instance of the CIM_MediaRedirectionSAP class. See 7.6.2. Cardinality is "1".
ManagedElement	Mandatory	This property shall be a reference to an instance of the CIM_MediaAccessDevice or a subclass of CIM_MediaAccessDevice class. See 7.6.2. Cardinality is "0..*".

1217 **10.12 CIM_ServiceAccessBySAP**

1218 The CIM_ServiceAccessBySAP association is used to relate the instance of CIM_RedirectionService to
 1219 the instances of CIM_MediaRedirectionSAP that are enabled by the service. Table 32 contains the
 1220 requirements for elements of this class.

1221 **Table 32 – Class: CIM_ServiceAccessBySAP**

Elements	Requirement	Notes
Antecedent	Mandatory	This property shall be a reference to an instance of the CIM_RedirectionService class. See 7.4.1. Cardinality is "1".
Dependent	Mandatory	This property shall be a reference to an instance of the CIM_MediaRedirectionSAP class. See 7.4.1. Cardinality is "1..*".

1222 **10.13 CIM_ServiceAffectsElement Relating CIM_RedirectionService to**
 1223 **CIM_ComputerSystem**

1224 The CIM_ServiceAffectsElement association is used to relate the instance of CIM_RedirectionService to
 1225 the instance of CIM_ComputerSystem that represents the source of the Media Redirection Flow. Table 33
 1226 contains the requirements for elements of this class.

1227 **Table 33 – Class: CIM_ServiceAffectsElement Referencing CIM_ComputerSystem**

Elements	Requirement	Notes
AffectingElement	Mandatory	This property shall be a reference to an instance of the CIM_RedirectionService class. See 7.2.2. Cardinality is "*".
AffectedElement	Mandatory	This property shall be a reference to an instance of the CIM_ComputerSystem class. See 7.2.2. Cardinality is "1".

1228 **10.14 CIM_ServiceAffectsElement Relating CIM_RedirectionService to**
 1229 **CIM_MediaDevice**

1230 The CIM_ServiceAffectsElement association is used to relate the instance of CIM_RedirectionService to
 1231 the local emulated Media Device that can be redirected. Table 34 contains the requirements for elements
 1232 of this class.

1233 **Table 34 – Class: CIM_ServiceAffectsElement Referencing CIM_MediaAccessDevice**

Elements	Requirement	Notes
AffectingElement	Mandatory	This property shall be a reference to an instance of the CIM_RedirectionService class. See 7.6.1. Cardinality is "1".
AffectedElement	Mandatory	This property shall be a reference to an instance of CIM_MediaAccessDevice or a subclass of CIM_MediaAccessDevice class. See 7.6.1. Cardinality is "0..1".

1234 **10.15 CIM_MediaAccessDevice**

1235 CIM_MediaDevice or a subclass of CIM_MediaAccessDevice represents the locally emulated Media
 1236 device that can be redirected to a remote system. Table 35 contains the requirements for elements of this
 1237 class.

1238 **Table 35 – Class: CIM_MediaAccessDevice**

Elements	Requirement	Notes
CreationClassName	Mandatory	Key
DeviceID	Mandatory	Key

1239 **10.16 CIM_MediaRedirectionCapabilities**

1240 CIM_MediaRedirectionCapabilities represents the capabilities of Media Redirection Service. Table 36
 1241 contains the requirements for elements of this class.

1242 **Table 36 – Class: CIM_MediaRedirectionCapabilities**

Elements	Requirement	Notes
InstanceID	Mandatory	Key
RequestedStatesSupported	Mandatory	See 7.3.6, 7.9.1.1 and 7.9.2.1.
ElementNameEditSupported	Mandatory	See 7.2.6.
MaxElementNameLen	Conditional	See 7.2.6. This property is Conditional on ElementNameEditSupported.
DevicesSupported[]	Mandatory	See 7.3.1.
MaxDevicesSupported[]	Mandatory	See 7.3.2.
SAPCapabilitiesSupported[]	Mandatory	See 7.3.3.
InfoFormatsSupported	Conditional	See 7.3.6. This property is Conditional on the ConnectionModesSupported array property including the value 3 (Connect).
MaxDevicesPerSAP	Mandatory	See 7.3.4.
ConnectionModesSupported[]	Mandatory	See 7.3.5.

1243 **10.17 CIM_MediaRedirectionSAP**

1244 The CIM_MediaRedirectionSAP class represents a Media Redirection SAP. Table 37 contains the
 1245 requirements for elements of this class.

1246 **Table 37 – Class: CIM_MediaRedirectionSAP**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	Key
SystemName	Mandatory	Key
Name	Mandatory	Key
CreationClassName	Mandatory	Key

Elements	Requirement	Notes
ElementName	Mandatory	See 7.4.5.
EnabledState	Mandatory	See 7.10.1.3.
RequestedState	Mandatory	See 7.10.1.2.
ConnectionMode	Mandatory	See 7.4.6.
CommandTimeout	Mandatory	See 7.4.7
ResetTimeout	Mandatory	See 7.4.8.
SessionTimeout	Mandatory	See 7.4.9.
RequestStateChange()	Mandatory	See 8.2.

1247 **10.18 CIM_RedirectionService**

1248 The CIM_RedirectionService class represents the ability to manage the Media redirection capabilities of a
 1249 computer system. Table 38 contains the requirements for elements of this class.

1250 **Table 38 – Class: CIM_RedirectionService**

Elements	Requirement	Notes
SystemCreationClassName	Mandatory	Key
SystemName	Mandatory	Key
CreationClassName	Mandatory	Key
Name	Mandatory	Key
ElementName	Mandatory	See 7.2.6.
MaxCurrentEnabledSAPs	Mandatory	See 7.2.5.
EnabledState	Mandatory	See 7.9.1.3.
RedirectionServiceType	Mandatory	The property shall match 5 (Media).
RequestedState	Mandatory	See 7.9.1.2.
RequestStateChange()	Mandatory	Conditional on RequestedStatesSupported. See 8.1.
